| [Review] | Literature synthesis and gap detection  |
| [Write]  | Paper writing and revision workflows    |
| [Plan]   | Publication and productivity operations |

# Table of Contents

1. Introduction
2. Instructions
3. Workflow Library
4. Summary

## Introduction

This IEEE Writing collection provides 100 expert research workflows engineered for high-rigor academic and technical delivery. Each workflow includes practical fields to help users move from strategy to publication-ready output.

## Instructions

- Select workflows by category and difficulty to match project maturity.
- Replace variables in each workflow with your discipline, data, and resource constraints.
- Use Expected Output as the acceptance criteria for quality control.
- Store outputs in versioned folders to preserve decision history.

# Workflow Library

## 1. Optimize Abstract for IEEE Reviewers: caption and table enhancement for technical rewrite from preprint to IEEE (IEEE Access) - practical deployment framing

**Objective:** Rewrite methods for reproducibility and procedural transparency. Prioritize rigor and produce publication-grade decisions for Technical Positioning.

**Prompt:** Rewrite the methodology around Technical Positioning for technical rewrite from preprint to IEEE so another lab can reproduce it without author contact. Include variable definitions, preprocessing chronology, model hyperparameters, instrumentation assumptions, and reproducibility checklist required for IEEE Access. Project profile: discipline=computational social science; dataset=open government policy data; preferred method=causal inference pipeline; reviewer persona=benchmarking specialist; output schema=compliance checklist; risk scenario=unexpected reviewer disagreement; timeline={timeline}; resources={resources}. Return outputs as numbered sections and end with an execution checklist.

**Example:** Example input: discipline=computational social science; dataset=open government policy data; timeline=14 weeks; resources=3 researchers + 2 GPUs; target venue=IEEE Access; reviewer persona=benchmarking specialist. Example outcome: compliance checklist with risk controls, reviewer-facing rationale, and milestone gates.

**Tips:** Name every tool/version and include randomness-control policy. Ensure the compliance checklist explicitly addresses unexpected reviewer disagreement and anticipated concerns from a benchmarking specialist.

**Expected Output:** A publication-ready compliance checklist that includes decisions, rationale, measurable criteria, and reviewer-resilient framing for Technical Positioning.

**Difficulty:** Beginner

**Category:** Strategy

## 2. Engineer a Results Section for IEEE: compliance-first editing for camera-ready compliance check (IEEE IoT Journal) - method comparison clarity

**Objective:** Craft concise, high-impact abstracts aligned with selective journal standards. Prioritize reproducibility and produce publication-grade decisions for Result Narration.

**Prompt:** Write a Nature-style abstract for a study on Result Narration in camera-ready compliance check. Constrain to problem, approach, principal quantitative finding, boundary condition, and broader implication. Provide a weaker draft and then a stronger revised draft with rationale. Project profile: discipline=materials informatics; dataset=federated hospital dataset; preferred method=Bayesian hierarchical model; reviewer persona=theory-oriented reviewer; output schema=citation repair map; risk scenario=high class imbalance; timeline={timeline}; resources={resources}. Return outputs as numbered sections and end with an execution checklist.

**Example:** Example input: discipline=materials informatics; dataset=federated hospital dataset; timeline=14 weeks; resources=3 researchers + 2 GPUs; target venue=IEEE IoT Journal; reviewer persona=theory-oriented reviewer. Example outcome: figure-caption package with risk controls, reviewer-facing rationale, and milestone gates.

**Tips:** One central claim per sentence keeps abstract logic clean and persuasive. Ensure the citation repair map explicitly addresses high class imbalance and anticipated concerns from a theory-oriented reviewer.

**Expected Output:** A publication-ready figure-caption package that includes decisions, rationale, measurable criteria, and reviewer-resilient framing for Result Narration.

**Difficulty:** Intermediate

**Category:** Analysis

### 3. Prepare IEEE-Ready Technical Narrative: results storytelling workflow for IEEE conference paper deadline sprint (IEEE TPDS) - editorial risk reduction

**Objective:** Transform visuals into evidence-rich storytelling assets. Prioritize clarity and produce publication-grade decisions for Limitations Framing.

**Prompt:** Generate a figure strategy for Limitations Framing with publication-grade caption drafts. For each figure, define purpose, metric, axis design, uncertainty communication, and interpretation sentence expected by IEEE TPDS. Add one caption rewrite for non-expert readers. Project profile: discipline=computational neuroscience; dataset=crowdsourced annotation dataset; preferred method=graph neural workflow; reviewer persona=methodology purist; output schema=figure-caption protocol; risk scenario=inter-annotator disagreement; timeline={timeline}; resources={resources}. Return outputs as numbered sections and end with an execution checklist.

**Example:** Example input: discipline=computational neuroscience; dataset=crowdsourced annotation dataset; timeline=14 weeks; resources=3 researchers + 2 GPUs; target venue=IEEE TPDS; reviewer persona=methodology purist. Example outcome: IEEE-ready section draft with risk controls, reviewer-facing rationale, and milestone gates.

**Tips:** Good captions stand alone and state what changed, by how much, and why it matters. Ensure the figure-caption protocol explicitly addresses inter-annotator disagreement and anticipated concerns from a methodology purist.

**Expected Output:** A publication-ready IEEE-ready section draft that includes decisions, rationale, measurable criteria, and reviewer-resilient framing for Limitations Framing.

**Difficulty:** Advanced

**Category:** Writing

### 4. Write a High-Impact IEEE Introduction: IEEE structure workflow for IEEE Transactions submission cycle (IEEE Transactions) - venue-specific optimization

**Objective:** Embed ethics and compliance checks into the technical workflow. Prioritize statistical power and produce publication-grade decisions for IEEE Formatting.

**Prompt:** Build an ethics checklist and mitigation plan for IEEE Formatting in IEEE Transactions submission cycle. Include fairness risks, privacy boundaries, human-subject concerns, reporting transparency, and audit evidence expected for IEEE Transactions review. Project profile: discipline=human-computer interaction; dataset=industrial telemetry stream; preferred method=mixed-methods protocol; reviewer persona=interdisciplinary committee member; output schema=statistical decision tree; risk scenario=small sample size constraints; timeline={timeline}; resources={resources}. Return outputs as numbered sections and end with an execution checklist.

**Example:** Example input: discipline=human-computer interaction; dataset=industrial telemetry stream; timeline=14 weeks; resources=3 researchers + 2 GPUs; target venue=IEEE Transactions; reviewer persona=interdisciplinary committee member. Example outcome: compliance checklist with risk controls, reviewer-facing rationale, and milestone gates.

**Tips:** Translate ethical risks into actionable controls with owner and verification evidence. Ensure the statistical decision tree explicitly addresses small sample size constraints and anticipated concerns from a interdisciplinary committee member.

**Expected Output:** A publication-ready compliance checklist that includes decisions, rationale, measurable criteria, and reviewer-resilient framing for IEEE Formatting.

**Difficulty:** Expert

**Category:** Publication

## 5. Optimize Abstract for IEEE Reviewers: caption and table enhancement for technical rewrite from preprint to IEEE (IEEE Access) - decision traceability

**Objective:** Choose venue strategy, narrative framing, and revision sequencing. Prioritize transferability and produce publication-grade decisions for Technical Positioning.

**Prompt:** Design a publication strategy for Technical Positioning: venue ladder (A-plan/B-plan), novelty framing options, deadline-aligned writing sprints, and reviewer-risk scenarios. Include a branch for conference-first then journal-extension path for IEEE Access. Project profile: discipline=robotics; dataset=city-scale mobility records; preferred method=time-series anomaly framework; reviewer persona=ethics compliance reviewer; output schema=ablation plan sheet; risk scenario=compute budget reduction; timeline={timeline}; resources={resources}. Return outputs as numbered sections and end with an execution checklist.

**Example:** Example input: discipline=robotics; dataset=city-scale mobility records; timeline=14 weeks; resources=3 researchers + 2 GPUs; target venue=IEEE Access; reviewer persona=ethics compliance reviewer. Example outcome: figure-caption package with risk controls, reviewer-facing rationale, and milestone gates.

**Tips:** Plan fallback venue narratives early to reduce resubmission cycle time. Ensure the ablation plan sheet explicitly addresses compute budget reduction and anticipated concerns from a ethics compliance reviewer.

**Expected Output:** A publication-ready figure-caption package that includes decisions, rationale, measurable criteria, and reviewer-resilient framing for Technical Positioning.

**Difficulty:** Beginner

**Category:** Methodology

## 6. Engineer a Results Section for IEEE: compliance-first editing for camera-ready compliance check (IEEE IoT Journal) - citation-strength positioning

**Objective:** Turn skeptical reviewer criticism into a persuasive, evidence-linked response workflow. Prioritize ethical compliance and produce publication-grade decisions for Result Narration.

**Prompt:** Assume Reviewer #2 challenges Result Narration for IEEE IoT Journal. Draft a response package with: acknowledgement sentence, technical clarification, direct manuscript change, optional added experiment, and fallback wording if resources are limited. Provide line-level mapping format for revision tracking. Project profile: discipline=digital health; dataset=public genomics panel; preferred method=hybrid rule-neural model; reviewer persona=reproducibility auditor; output schema=rebuttal response grid; risk scenario=time-limited resubmission window; timeline={timeline}; resources={resources}. Return outputs as numbered sections and end with an execution checklist.

**Example:** Example input: discipline=digital health; dataset=public genomics panel; timeline=14 weeks; resources=3 researchers + 2 GPUs; target venue=IEEE IoT Journal; reviewer persona=reproducibility auditor. Example outcome: IEEE-ready section draft with risk controls, reviewer-facing rationale, and milestone gates.

**Tips:** Use respectful tone and separate explanation, action, and manuscript delta into distinct bullets. Ensure the rebuttal response grid explicitly addresses time-limited resubmission window and anticipated concerns from a reproducibility auditor.

**Expected Output:** A publication-ready IEEE-ready section draft that includes decisions, rationale, measurable criteria, and reviewer-resilient framing for Result Narration.

**Difficulty:** Intermediate

**Category:** Execution

## 7. Prepare IEEE-Ready Technical Narrative: results storytelling workflow for IEEE conference paper deadline sprint (IEEE TPDS) - defense-ready reasoning

**Objective:** Plan a high-confidence major revision package for journal resubmission. Prioritize computational efficiency and produce publication-grade decisions for Limitations Framing.

**Prompt:** Create a major revision plan for an Elsevier-style decision letter focused on Limitations Framing. Include comment clustering, evidence plan, timeline by dependency, added-analysis options, and response-letter structure that anticipates editor priorities for IEEE TPDS. Project profile: discipline=machine learning; dataset=benchmark tabular risk dataset; preferred method=multi-objective optimizer; reviewer persona=applied domain expert; output schema=section rewrite pack; risk scenario=ethics board clarification request; timeline={timeline}; resources={resources}. Return outputs as numbered sections and end with an execution checklist.

**Example:** Example input: discipline=machine learning; dataset=benchmark tabular risk dataset; timeline=14 weeks; resources=3 researchers + 2 GPUs; target venue=IEEE TPDS; reviewer persona=applied domain expert. Example outcome: compliance checklist with risk controls, reviewer-facing rationale, and milestone gates.

**Tips:** Group reviewer comments by technical dependency to prevent contradictory edits. Ensure the section rewrite pack explicitly addresses ethics board clarification request and anticipated concerns from a applied domain expert.

**Expected Output:** A publication-ready compliance checklist that includes decisions, rationale, measurable criteria, and reviewer-resilient framing for Limitations Framing.

**Difficulty:** Advanced

**Category:** Compliance

## 8. Write a High-Impact IEEE Introduction: IEEE structure workflow for IEEE Transactions submission cycle (IEEE Transactions) - high-confidence statistical reporting

**Objective:** Select robust statistical strategy and interpretation logic. Prioritize clinical relevance and produce publication-grade decisions for IEEE Formatting.

**Prompt:** Design a statistical analysis workflow for IEEE Formatting with assumptions, test-selection logic, effect-size reporting, multiplicity correction, and uncertainty interpretation. Output a decision tree that maps data conditions to recommended tests for IEEE Transactions. Project profile: discipline=climate informatics; dataset=multi-modal image-text corpus; preferred method=semi-supervised training setup; reviewer persona=systems performance reviewer; output schema=action timeline; risk scenario=conflicting baseline outcomes; timeline={timeline}; resources={resources}. Return outputs as numbered sections and end with an execution checklist.

**Example:** Example input: discipline=climate informatics; dataset=multi-modal image-text corpus; timeline=14 weeks; resources=3 researchers + 2 GPUs; target venue=IEEE Transactions; reviewer persona=systems performance reviewer. Example outcome: figure-caption package with risk controls, reviewer-facing rationale, and milestone gates.

**Tips:** Pair p-values with effect sizes and confidence intervals in every result claim. Ensure the action timeline explicitly addresses conflicting baseline outcomes and anticipated concerns from a systems performance reviewer.

**Expected Output:** A publication-ready figure-caption package that includes decisions, rationale, measurable criteria, and reviewer-resilient framing for IEEE Formatting.

**Difficulty:** Expert

**Category:** Reasoning

## 9. Optimize Abstract for IEEE Reviewers: caption and table enhancement for technical rewrite from preprint to IEEE (IEEE Access) - evidence-first writing

**Objective:** Detect weak citation support and strengthen scholarly positioning. Prioritize publication readiness and produce publication-grade decisions for Technical Positioning.

**Prompt:** Analyze a draft on Technical Positioning and identify citation gaps by claim type: foundational, comparative, methodological, and limitation-related. Return a prioritized fill plan with query phrases, likely source types, and insertion points tailored to IEEE Access. Project profile: discipline=cybersecurity; dataset=longitudinal sensor dataset; preferred method=counterfactual evaluation approach; reviewer persona=industry impact reviewer; output schema=risk register; risk scenario=missing metadata in source data; timeline={timeline}; resources={resources}. Return outputs as numbered sections and end with an execution checklist.

**Example:** Example input: discipline=cybersecurity; dataset=longitudinal sensor dataset; timeline=14 weeks; resources=3 researchers + 2 GPUs; target venue=IEEE Access; reviewer persona=industry impact reviewer. Example outcome: IEEE-ready section draft with risk controls, reviewer-facing rationale, and milestone gates.

**Tips:** Flag unsupported superlatives first; they trigger avoidable reviewer criticism. Ensure the risk register explicitly addresses missing metadata in source data and anticipated concerns from a industry impact reviewer.

**Expected Output:** A publication-ready IEEE-ready section draft that includes decisions, rationale, measurable criteria, and reviewer-resilient framing for Technical Positioning.

**Difficulty:** Beginner

**Category:** Analysis

## 10. Engineer a Results Section for IEEE: compliance-first editing for camera-ready compliance check (IEEE IoT Journal) - hypothesis stress testing

**Objective:** Convert raw metrics into defensible scientific interpretation. Prioritize novelty and produce publication-grade decisions for Result Narration.

**Prompt:** Interpret results for Result Narration using a claim-evidence map: primary findings, uncertainty envelope, competing explanations, boundary conditions, and implications for future work in IEEE IoT Journal. Add one paragraph that preempts overclaiming. Project profile: discipline=biomedical engineering; dataset=multi-site clinical cohort; preferred method=transformer baseline; reviewer persona=editor focused on clarity; output schema=claim-evidence table; risk scenario=incomplete ablation coverage; timeline={timeline}; resources={resources}. Return outputs as numbered sections and end with an execution checklist.

**Example:** Example input: discipline=biomedical engineering; dataset=multi-site clinical cohort; timeline=14 weeks; resources=3 researchers + 2 GPUs; target venue=IEEE IoT Journal; reviewer persona=editor focused on clarity. Example outcome: compliance checklist with risk controls, reviewer-facing rationale, and milestone gates.

**Tips:** State what the results do not prove as clearly as what they do prove. Ensure the claim-evidence table explicitly addresses incomplete ablation coverage and anticipated concerns from a editor focused on clarity.

**Expected Output:** A publication-ready compliance checklist that includes decisions, rationale, measurable criteria, and reviewer-resilient framing for Result Narration.

**Difficulty:** Intermediate

**Category:** Writing

## 11. Prepare IEEE-Ready Technical Narrative: results storytelling workflow for IEEE conference paper deadline sprint (IEEE TPDS) - results-to-insight translation

**Objective:** Detect non-obvious research gaps and convert them into testable opportunities. Prioritize rigor and produce publication-grade decisions for Limitations Framing.

**Prompt:** You are a literature forensics specialist. From the context below, identify unresolved contradictions in Limitations Framing and rank them by impact and tractability. Then design three testable gap statements, each with required datasets, threat-to-validity notes, and likely reviewer objections for IEEE TPDS. Project profile: discipline=computational social science; dataset=open government policy data; preferred method=causal inference pipeline; reviewer persona=skeptical statistician; output schema=decision matrix; risk scenario=dataset shift at

deployment; timeline={timeline}; resources={resources}. Return outputs as numbered sections and end with an execution checklist.

**Example:** Example input: discipline=computational social science; dataset=open government policy data; timeline=14 weeks; resources=3 researchers + 2 GPUs; target venue=IEEE TPDS; reviewer persona=skeptical statistician. Example outcome: figure-caption package with risk controls, reviewer-facing rationale, and milestone gates.

**Tips:** Distinguish 'no evidence exists' from 'evidence exists but conflicts' to avoid weak gap claims. Ensure the decision matrix explicitly addresses dataset shift at deployment and anticipated concerns from a skeptical statistician.

**Expected Output:** A publication-ready figure-caption package that includes decisions, rationale, measurable criteria, and reviewer-resilient framing for Limitations Framing.

**Difficulty:** Advanced

**Category:** Publication

## 12. Write a High-Impact IEEE Introduction: IEEE structure workflow for IEEE Transactions submission cycle (IEEE Transactions) - major-revision readiness

**Objective:** Produce section drafts compliant with high-impact conference and journal conventions. Prioritize reproducibility and produce publication-grade decisions for IEEE Formatting.

**Prompt:** Generate a publication-ready section for IEEE Formatting tuned for IEEE Transactions. Enforce concise technical style, explicit contributions, and strong figure/table callouts. Provide two style variants: IEEE Transactions tone and ACM conference tone with sentence-level rewrites. Project profile: discipline=materials informatics; dataset=federated hospital dataset; preferred method=Bayesian hierarchical model; reviewer persona=benchmarking specialist; output schema=compliance checklist; risk scenario=unexpected reviewer disagreement; timeline={timeline}; resources={resources}. Return outputs as numbered sections and end with an execution checklist.

**Example:** Example input: discipline=materials informatics; dataset=federated hospital dataset; timeline=14 weeks; resources=3 researchers + 2 GPUs; target venue=IEEE Transactions; reviewer persona=benchmarking specialist. Example outcome: IEEE-ready section draft with risk controls, reviewer-facing rationale, and milestone gates.

**Tips:** Avoid generic claims; anchor every paragraph with result-oriented language. Ensure the compliance checklist explicitly addresses unexpected reviewer disagreement and anticipated concerns from a benchmarking specialist.

**Expected Output:** A publication-ready IEEE-ready section draft that includes decisions, rationale, measurable criteria, and reviewer-resilient framing for IEEE Formatting.

**Difficulty:** Expert

**Category:** Methodology

## 13. Optimize Abstract for IEEE Reviewers: caption and table enhancement for technical rewrite from preprint to IEEE (IEEE Access) - replication-grade documentation

**Objective:** Pressure-test experimental design before expensive execution. Prioritize clarity and produce publication-grade decisions for Technical Positioning.

**Prompt:** Audit the experimental design for Technical Positioning. Produce control/ablation matrix, confound analysis, data leakage checks, minimum sample strategy, and statistical power guardrails suitable for IEEE Access reviewers. Include a stop/go decision protocol. Project profile: discipline=computational neuroscience; dataset=crowdsourced annotation dataset; preferred method=graph neural workflow; reviewer persona=theory-oriented reviewer; output schema=citation repair map; risk scenario=high class imbalance;

timeline={timeline}; resources={resources}. Return outputs as numbered sections and end with an execution checklist.

**Example:** Example input: discipline=computational neuroscience; dataset=crowdsourced annotation dataset; timeline=14 weeks; resources=3 researchers + 2 GPUs; target venue=IEEE Access; reviewer persona=theory-oriented reviewer. Example outcome: compliance checklist with risk controls, reviewer-facing rationale, and milestone gates.

**Tips:** Design ablations to isolate one causal factor at a time. Ensure the citation repair map explicitly addresses high class imbalance and anticipated concerns from a theory-oriented reviewer.

**Expected Output:** A publication-ready compliance checklist that includes decisions, rationale, measurable criteria, and reviewer-resilient framing for Technical Positioning.

**Difficulty:** Beginner

**Category:** Execution

## 14. Engineer a Results Section for IEEE: compliance-first editing for camera-ready compliance check (IEEE IoT Journal) - reviewer-resilient argumentation

**Objective:** Convert technical narrative into clean, production-ready LaTeX structure. Prioritize statistical power and produce publication-grade decisions for Result Narration.

**Prompt:** Create a LaTeX writing workflow for Result Narration: section skeleton, theorem/algorithm formatting guidance, table conventions, citation macros, and cross-reference hygiene. Include common formatting errors and fixes for IEEE IoT Journal submission checks. Project profile: discipline=human-computer interaction; dataset=industrial telemetry stream; preferred method=mixed-methods protocol; reviewer persona=methodology purist; output schema=figure-caption protocol; risk scenario=inter-annotator disagreement; timeline={timeline}; resources={resources}. Return outputs as numbered sections and end with an execution checklist.

**Example:** Example input: discipline=human-computer interaction; dataset=industrial telemetry stream; timeline=14 weeks; resources=3 researchers + 2 GPUs; target venue=IEEE IoT Journal; reviewer persona=methodology purist. Example outcome: figure-caption package with risk controls, reviewer-facing rationale, and milestone gates.

**Tips:** Draft content in semantic chunks before polishing visual layout. Ensure the figure-caption protocol explicitly addresses inter-annotator disagreement and anticipated concerns from a methodology purist.

**Expected Output:** A publication-ready figure-caption package that includes decisions, rationale, measurable criteria, and reviewer-resilient framing for Result Narration.

**Difficulty:** Intermediate

**Category:** Compliance

## 15. Prepare IEEE-Ready Technical Narrative: results storytelling workflow for IEEE conference paper deadline sprint (IEEE TPDS) - ethics-by-design reporting

**Objective:** Prepare rigorous responses for committee or reviewer questioning. Prioritize transferability and produce publication-grade decisions for Limitations Framing.

**Prompt:** Simulate a high-pressure Q&A; on Limitations Framing. Generate 15 hard questions (methods, validity, novelty, limitations, impact) and produce concise, evidence-backed responses with fallback answers for uncertain data points. Include one slide cue per answer. Project profile: discipline=robotics; dataset=city-scale mobility records; preferred method=time-series anomaly framework; reviewer persona=interdisciplinary committee member; output schema=statistical decision tree; risk scenario=small sample size constraints; timeline={timeline}; resources={resources}. Return outputs as numbered sections and end with an execution checklist.

**Example:** Example input: discipline=robotics; dataset=city-scale mobility records; timeline=14 weeks; resources=3 researchers + 2 GPUs; target venue=IEEE TPDS; reviewer persona=interdisciplinary committee member. Example outcome: IEEE-ready section draft with risk controls, reviewer-facing rationale, and milestone gates.

**Tips:** Structure answers as claim -> evidence -> limitation -> next action. Ensure the statistical decision tree explicitly addresses small sample size constraints and anticipated concerns from a interdisciplinary committee member.

**Expected Output:** A publication-ready IEEE-ready section draft that includes decisions, rationale, measurable criteria, and reviewer-resilient framing for Limitations Framing.

**Difficulty:** Advanced

**Category:** Reasoning

## 16. Write a High-Impact IEEE Introduction: IEEE structure workflow for IEEE Transactions submission cycle (IEEE Transactions) - limitations-first transparency

**Objective:** Create a contribution map that defends novelty against closest prior work and defines what is publishable. Prioritize ethical compliance and produce publication-grade decisions for IEEE Formatting.

**Prompt:** Act as a senior research editor. Build a contribution architecture for IEEE Formatting in IEEE Transactions submission cycle targeting IEEE Transactions. Output sections: contribution claim stack, nearest-neighbor prior work comparison, differentiator evidence plan, failure-risk matrix, and a 30/60/90-day execution plan. Project profile: discipline=digital health; dataset=public genomics panel; preferred method=hybrid rule-neural model; reviewer persona=ethics compliance reviewer; output schema=ablation plan sheet; risk scenario=compute budget reduction; timeline={timeline}; resources={resources}. Return outputs as numbered sections and end with an execution checklist.

**Example:** Example input: discipline=digital health; dataset=public genomics panel; timeline=14 weeks; resources=3 researchers + 2 GPUs; target venue=IEEE Transactions; reviewer persona=ethics compliance reviewer. Example outcome: compliance checklist with risk controls, reviewer-facing rationale, and milestone gates.

**Tips:** Force each claim to link to one measurable piece of evidence and one comparison baseline. Ensure the ablation plan sheet explicitly addresses compute budget reduction and anticipated concerns from a ethics compliance reviewer.

**Expected Output:** A publication-ready compliance checklist that includes decisions, rationale, measurable criteria, and reviewer-resilient framing for IEEE Formatting.

**Difficulty:** Expert

**Category:** Rebuttal

## 17. Optimize Abstract for IEEE Reviewers: caption and table enhancement for technical rewrite from preprint to IEEE (IEEE Access) - cross-domain readability

**Objective:** Rewrite methods for reproducibility and procedural transparency. Prioritize computational efficiency and produce publication-grade decisions for Technical Positioning.

**Prompt:** Rewrite the methodology around Technical Positioning for technical rewrite from preprint to IEEE so another lab can reproduce it without author contact. Include variable definitions, preprocessing chronology, model hyperparameters, instrumentation assumptions, and reproducibility checklist required for IEEE Access. Project profile: discipline=machine learning; dataset=benchmark tabular risk dataset; preferred method=multi-objective optimizer; reviewer persona=reproducibility auditor; output schema=rebuttal response grid; risk scenario=time-limited resubmission window; timeline={timeline}; resources={resources}. Return outputs as numbered sections and end with an execution checklist.

**Example:** Example input: discipline=machine learning; dataset=benchmark tabular risk dataset; timeline=14 weeks; resources=3 researchers + 2 GPUs; target venue=IEEE Access; reviewer persona=reproducibility auditor. Example outcome: figure-caption package with risk controls, reviewer-facing rationale, and milestone gates.

**Tips:** Name every tool/version and include randomness-control policy. Ensure the rebuttal response grid explicitly addresses time-limited resubmission window and anticipated concerns from a reproducibility auditor.

**Expected Output:** A publication-ready figure-caption package that includes decisions, rationale, measurable criteria, and reviewer-resilient framing for Technical Positioning.

**Difficulty:** Beginner

**Category:** Validation

## 18. Engineer a Results Section for IEEE: compliance-first editing for camera-ready compliance check (IEEE IoT Journal) - impact-focused communication

**Objective:** Craft concise, high-impact abstracts aligned with selective journal standards. Prioritize clinical relevance and produce publication-grade decisions for Result Narration.

**Prompt:** Write a Nature-style abstract for a study on Result Narration in camera-ready compliance check. Constrain to problem, approach, principal quantitative finding, boundary condition, and broader implication. Provide a weaker draft and then a stronger revised draft with rationale. Project profile: discipline=climate informatics; dataset=multi-modal image-text corpus; preferred method=semi-supervised training setup; reviewer persona=applied domain expert; output schema=section rewrite pack; risk scenario=ethics board clarification request; timeline={timeline}; resources={resources}. Return outputs as numbered sections and end with an execution checklist.

**Example:** Example input: discipline=climate informatics; dataset=multi-modal image-text corpus; timeline=14 weeks; resources=3 researchers + 2 GPUs; target venue=IEEE IoT Journal; reviewer persona=applied domain expert. Example outcome: IEEE-ready section draft with risk controls, reviewer-facing rationale, and milestone gates.

**Tips:** One central claim per sentence keeps abstract logic clean and persuasive. Ensure the section rewrite pack explicitly addresses ethics board clarification request and anticipated concerns from an applied domain expert.

**Expected Output:** A publication-ready IEEE-ready section draft that includes decisions, rationale, measurable criteria, and reviewer-resilient framing for Result Narration.

**Difficulty:** Intermediate

**Category:** Publication

## 19. Prepare IEEE-Ready Technical Narrative: results storytelling workflow for IEEE conference paper deadline sprint (IEEE TPDS) - publishable novelty framing

**Objective:** Transform visuals into evidence-rich storytelling assets. Prioritize publication readiness and produce publication-grade decisions for Limitations Framing.

**Prompt:** Generate a figure strategy for Limitations Framing with publication-grade caption drafts. For each figure, define purpose, metric, axis design, uncertainty communication, and interpretation sentence expected by IEEE TPDS. Add one caption rewrite for non-expert readers. Project profile: discipline=cybersecurity; dataset=longitudinal sensor dataset; preferred method=counterfactual evaluation approach; reviewer persona=systems performance reviewer; output schema=action timeline; risk scenario=conflicting baseline outcomes; timeline={timeline}; resources={resources}. Return outputs as numbered sections and end with an execution checklist.

**Example:** Example input: discipline=cybersecurity; dataset=longitudinal sensor dataset; timeline=14 weeks; resources=3 researchers + 2 GPUs; target venue=IEEE TPDS; reviewer persona=systems performance reviewer. Example outcome: compliance checklist with risk controls, reviewer-facing rationale, and milestone gates.

**Tips:** Good captions stand alone and state what changed, by how much, and why it matters. Ensure the action timeline explicitly addresses conflicting baseline outcomes and anticipated concerns from a systems performance reviewer.

**Expected Output:** A publication-ready compliance checklist that includes decisions, rationale, measurable criteria, and reviewer-resilient framing for Limitations Framing.

**Difficulty:** Advanced

**Category:** Methodology

## 20. Write a High-Impact IEEE Introduction: IEEE structure workflow for IEEE Transactions submission cycle (IEEE Transactions) - practical deployment framing

**Objective:** Embed ethics and compliance checks into the technical workflow. Prioritize novelty and produce publication-grade decisions for IEEE Formatting.

**Prompt:** Build an ethics checklist and mitigation plan for IEEE Formatting in IEEE Transactions submission cycle. Include fairness risks, privacy boundaries, human-subject concerns, reporting transparency, and audit evidence expected for IEEE Transactions review. Project profile: discipline=biomedical engineering; dataset=multi-site clinical cohort; preferred method=transformer baseline; reviewer persona=industry impact reviewer; output schema=risk register; risk scenario=missing metadata in source data; timeline={timeline}; resources={resources}. Return outputs as numbered sections and end with an execution checklist.

**Example:** Example input: discipline=biomedical engineering; dataset=multi-site clinical cohort; timeline=14 weeks; resources=3 researchers + 2 GPUs; target venue=IEEE Transactions; reviewer persona=industry impact reviewer. Example outcome: figure-caption package with risk controls, reviewer-facing rationale, and milestone gates.

**Tips:** Translate ethical risks into actionable controls with owner and verification evidence. Ensure the risk register explicitly addresses missing metadata in source data and anticipated concerns from a industry impact reviewer.

**Expected Output:** A publication-ready figure-caption package that includes decisions, rationale, measurable criteria, and reviewer-resilient framing for IEEE Formatting.

**Difficulty:** Expert

**Category:** Execution

## 21. Optimize Abstract for IEEE Reviewers: caption and table enhancement for technical rewrite from preprint to IEEE (IEEE Access) - method comparison clarity

**Objective:** Choose venue strategy, narrative framing, and revision sequencing. Prioritize rigor and produce publication-grade decisions for Technical Positioning.

**Prompt:** Design a publication strategy for Technical Positioning: venue ladder (A-plan/B-plan), novelty framing options, deadline-aligned writing sprints, and reviewer-risk scenarios. Include a branch for conference-first then journal-extension path for IEEE Access. Project profile: discipline=computational social science; dataset=open government policy data; preferred method=causal inference pipeline; reviewer persona=editor focused on clarity; output schema=claim-evidence table; risk scenario=incomplete ablation coverage; timeline={timeline}; resources={resources}. Return outputs as numbered sections and end with an execution checklist.

**Example:** Example input: discipline=computational social science; dataset=open government policy data; timeline=14 weeks; resources=3 researchers + 2 GPUs; target venue=IEEE Access; reviewer persona=editor focused on clarity. Example outcome: IEEE-ready section draft with risk controls, reviewer-facing rationale, and milestone gates.

**Tips:** Plan fallback venue narratives early to reduce resubmission cycle time. Ensure the claim-evidence table explicitly addresses incomplete ablation coverage and anticipated concerns from a editor focused on clarity.

**Expected Output:** A publication-ready IEEE-ready section draft that includes decisions, rationale, measurable criteria, and reviewer-resilient framing for Technical Positioning.

**Difficulty:** Beginner

**Category:** Compliance

## 22. Engineer a Results Section for IEEE: compliance-first editing for camera-ready compliance check (IEEE IoT Journal) - editorial risk reduction

**Objective:** Turn skeptical reviewer criticism into a persuasive, evidence-linked response workflow. Prioritize reproducibility and produce publication-grade decisions for Result Narration.

**Prompt:** Assume Reviewer #2 challenges Result Narration for IEEE IoT Journal. Draft a response package with: acknowledgement sentence, technical clarification, direct manuscript change, optional added experiment, and fallback wording if resources are limited. Provide line-level mapping format for revision tracking. Project profile: discipline=materials informatics; dataset=federated hospital dataset; preferred method=Bayesian hierarchical model; reviewer persona=skeptical statistician; output schema=decision matrix; risk scenario=dataset shift at deployment; timeline={timeline}; resources={resources}. Return outputs as numbered sections and end with an execution checklist.

**Example:** Example input: discipline=materials informatics; dataset=federated hospital dataset; timeline=14 weeks; resources=3 researchers + 2 GPUs; target venue=IEEE IoT Journal; reviewer persona=skeptical statistician. Example outcome: compliance checklist with risk controls, reviewer-facing rationale, and milestone gates.

**Tips:** Use respectful tone and separate explanation, action, and manuscript delta into distinct bullets. Ensure the decision matrix explicitly addresses dataset shift at deployment and anticipated concerns from a skeptical statistician.

**Expected Output:** A publication-ready compliance checklist that includes decisions, rationale, measurable criteria, and reviewer-resilient framing for Result Narration.

**Difficulty:** Intermediate

**Category:** Reasoning

## 23. Prepare IEEE-Ready Technical Narrative: results storytelling workflow for IEEE conference paper deadline sprint (IEEE TPDS) - venue-specific optimization

**Objective:** Plan a high-confidence major revision package for journal resubmission. Prioritize clarity and produce publication-grade decisions for Limitations Framing.

**Prompt:** Create a major revision plan for an Elsevier-style decision letter focused on Limitations Framing. Include comment clustering, evidence plan, timeline by dependency, added-analysis options, and response-letter structure that anticipates editor priorities for IEEE TPDS. Project profile: discipline=computational neuroscience; dataset=crowdsourced annotation dataset; preferred method=graph neural workflow; reviewer persona=benchmarking specialist; output schema=compliance checklist; risk scenario=unexpected reviewer disagreement; timeline={timeline}; resources={resources}. Return outputs as numbered sections and end with an execution checklist.

**Example:** Example input: discipline=computational neuroscience; dataset=crowdsourced annotation dataset; timeline=14 weeks; resources=3 researchers + 2 GPUs; target venue=IEEE TPDS; reviewer persona=benchmarking specialist. Example outcome: figure-caption package with risk controls, reviewer-facing rationale, and milestone gates.

**Tips:** Group reviewer comments by technical dependency to prevent contradictory edits. Ensure the compliance checklist explicitly addresses unexpected reviewer disagreement and anticipated concerns from a benchmarking specialist.

**Expected Output:** A publication-ready figure-caption package that includes decisions, rationale, measurable criteria, and reviewer-resilient framing for Limitations Framing.

**Difficulty:** Advanced

**Category:** Rebuttal

## 24. Write a High-Impact IEEE Introduction: IEEE structure workflow for IEEE Transactions submission cycle (IEEE Transactions) - decision traceability

**Objective:** Select robust statistical strategy and interpretation logic. Prioritize statistical power and produce publication-grade decisions for IEEE Formatting.

**Prompt:** Design a statistical analysis workflow for IEEE Formatting with assumptions, test-selection logic, effect-size reporting, multiplicity correction, and uncertainty interpretation. Output a decision tree that maps data conditions to recommended tests for IEEE Transactions. Project profile: discipline=human-computer interaction; dataset=industrial telemetry stream; preferred method=mixed-methods protocol; reviewer persona=theory-oriented reviewer; output schema=citation repair map; risk scenario=high class imbalance; timeline={timeline}; resources={resources}. Return outputs as numbered sections and end with an execution checklist.

**Example:** Example input: discipline=human-computer interaction; dataset=industrial telemetry stream; timeline=14 weeks; resources=3 researchers + 2 GPUs; target venue=IEEE Transactions; reviewer persona=theory-oriented reviewer. Example outcome: IEEE-ready section draft with risk controls, reviewer-facing rationale, and milestone gates.

**Tips:** Pair p-values with effect sizes and confidence intervals in every result claim. Ensure the citation repair map explicitly addresses high class imbalance and anticipated concerns from a theory-oriented reviewer.

**Expected Output:** A publication-ready IEEE-ready section draft that includes decisions, rationale, measurable criteria, and reviewer-resilient framing for IEEE Formatting.

**Difficulty:** Expert

**Category:** Validation

## 25. Optimize Abstract for IEEE Reviewers: caption and table enhancement for technical rewrite from preprint to IEEE (IEEE Access) - citation-strength positioning

**Objective:** Detect weak citation support and strengthen scholarly positioning. Prioritize transferability and produce publication-grade decisions for Technical Positioning.

**Prompt:** Analyze a draft on Technical Positioning and identify citation gaps by claim type: foundational, comparative, methodological, and limitation-related. Return a prioritized fill plan with query phrases, likely source types, and insertion points tailored to IEEE Access. Project profile: discipline=robotics; dataset=city-scale mobility records; preferred method=time-series anomaly framework; reviewer persona=methodology purist; output schema=figure-caption protocol; risk scenario=inter-annotator disagreement; timeline={timeline}; resources={resources}. Return outputs as numbered sections and end with an execution checklist.

**Example:** Example input: discipline=robotics; dataset=city-scale mobility records; timeline=14 weeks; resources=3 researchers + 2 GPUs; target venue=IEEE Access; reviewer persona=methodology purist. Example outcome: compliance checklist with risk controls, reviewer-facing rationale, and milestone gates.

**Tips:** Flag unsupported superlatives first; they trigger avoidable reviewer criticism. Ensure the figure-caption protocol explicitly addresses inter-annotator disagreement and anticipated concerns from a methodology purist.

**Expected Output:** A publication-ready compliance checklist that includes decisions, rationale, measurable criteria, and reviewer-resilient framing for Technical Positioning.

**Difficulty:** Beginner

**Category:** Optimization

## 26. Engineer a Results Section for IEEE: compliance-first editing for camera-ready compliance check (IEEE IoT Journal) - defense-ready reasoning

**Objective:** Convert raw metrics into defensible scientific interpretation. Prioritize ethical compliance and produce publication-grade decisions for Result Narration.

**Prompt:** Interpret results for Result Narration using a claim-evidence map: primary findings, uncertainty envelope, competing explanations, boundary conditions, and implications for future work in IEEE IoT Journal. Add one paragraph that preempts overclaiming. Project profile: discipline=digital health; dataset=public genomics panel; preferred method=hybrid rule-neural model; reviewer persona=interdisciplinary committee member; output schema=statistical decision tree; risk scenario=small sample size constraints; timeline={timeline}; resources={resources}. Return outputs as numbered sections and end with an execution checklist.

**Example:** Example input: discipline=digital health; dataset=public genomics panel; timeline=14 weeks; resources=3 researchers + 2 GPUs; target venue=IEEE IoT Journal; reviewer persona=interdisciplinary committee member. Example outcome: figure-caption package with risk controls, reviewer-facing rationale, and milestone gates.

**Tips:** State what the results do not prove as clearly as what they do prove. Ensure the statistical decision tree explicitly addresses small sample size constraints and anticipated concerns from a interdisciplinary committee member.

**Expected Output:** A publication-ready figure-caption package that includes decisions, rationale, measurable criteria, and reviewer-resilient framing for Result Narration.

**Difficulty:** Intermediate

**Category:** Planning

## 27. Prepare IEEE-Ready Technical Narrative: results storytelling workflow for IEEE conference paper deadline sprint (IEEE TPDS) - high-confidence statistical reporting

**Objective:** Detect non-obvious research gaps and convert them into testable opportunities. Prioritize computational efficiency and produce publication-grade decisions for Limitations Framing.

**Prompt:** You are a literature forensics specialist. From the context below, identify unresolved contradictions in Limitations Framing and rank them by impact and tractability. Then design three testable gap statements, each with required datasets, threat-to-validity notes, and likely reviewer objections for IEEE TPDS. Project profile: discipline=machine learning; dataset=benchmark tabular risk dataset; preferred method=multi-objective optimizer; reviewer persona=ethics compliance reviewer; output schema=ablation plan sheet; risk scenario=compute budget reduction; timeline={timeline}; resources={resources}. Return outputs as numbered sections and end with an execution checklist.

**Example:** Example input: discipline=machine learning; dataset=benchmark tabular risk dataset; timeline=14 weeks; resources=3 researchers + 2 GPUs; target venue=IEEE TPDS; reviewer persona=ethics compliance reviewer. Example outcome: IEEE-ready section draft with risk controls, reviewer-facing rationale, and milestone gates.

**Tips:** Distinguish 'no evidence exists' from 'evidence exists but conflicts' to avoid weak gap claims. Ensure the ablation plan sheet explicitly addresses compute budget reduction and anticipated concerns from a ethics compliance reviewer.

**Expected Output:** A publication-ready IEEE-ready section draft that includes decisions, rationale, measurable criteria, and reviewer-resilient framing for Limitations Framing.

**Difficulty:** Advanced

**Category:** Execution

## 28. Write a High-Impact IEEE Introduction: IEEE structure workflow for IEEE Transactions submission cycle (IEEE Transactions) - evidence-first writing

**Objective:** Produce section drafts compliant with high-impact conference and journal conventions. Prioritize clinical relevance and produce publication-grade decisions for IEEE Formatting.

**Prompt:** Generate a publication-ready section for IEEE Formatting tuned for IEEE Transactions. Enforce concise technical style, explicit contributions, and strong figure/table callouts. Provide two style variants: IEEE Transactions tone and ACM conference tone with sentence-level rewrites. Project profile: discipline=climate informatics; dataset=multi-modal image-text corpus; preferred method=semi-supervised training setup; reviewer persona=reproducibility auditor; output schema=rebuttal response grid; risk scenario=time-limited resubmission window; timeline={timeline}; resources={resources}. Return outputs as numbered sections and end with an execution checklist.

**Example:** Example input: discipline=climate informatics; dataset=multi-modal image-text corpus; timeline=14 weeks; resources=3 researchers + 2 GPUs; target venue=IEEE Transactions; reviewer persona=reproducibility auditor. Example outcome: compliance checklist with risk controls, reviewer-facing rationale, and milestone gates.

**Tips:** Avoid generic claims; anchor every paragraph with result-oriented language. Ensure the rebuttal response grid explicitly addresses time-limited resubmission window and anticipated concerns from a reproducibility auditor.

**Expected Output:** A publication-ready compliance checklist that includes decisions, rationale, measurable criteria, and reviewer-resilient framing for IEEE Formatting.

**Difficulty:** Expert

**Category:** Compliance

## 29. Optimize Abstract for IEEE Reviewers: caption and table enhancement for technical rewrite from preprint to IEEE (IEEE Access) - hypothesis stress testing

**Objective:** Pressure-test experimental design before expensive execution. Prioritize publication readiness and produce publication-grade decisions for Technical Positioning.

**Prompt:** Audit the experimental design for Technical Positioning. Produce control/ablation matrix, confound analysis, data leakage checks, minimum sample strategy, and statistical power guardrails suitable for IEEE Access reviewers. Include a stop/go decision protocol. Project profile: discipline=cybersecurity; dataset=longitudinal sensor dataset; preferred method=counterfactual evaluation approach; reviewer persona=applied domain expert; output schema=section rewrite pack; risk scenario=ethics board clarification request; timeline={timeline}; resources={resources}. Return outputs as numbered sections and end with an execution checklist.

**Example:** Example input: discipline=cybersecurity; dataset=longitudinal sensor dataset; timeline=14 weeks; resources=3 researchers + 2 GPUs; target venue=IEEE Access; reviewer persona=applied domain expert. Example outcome: figure-caption package with risk controls, reviewer-facing rationale, and milestone gates.

**Tips:** Design ablations to isolate one causal factor at a time. Ensure the section rewrite pack explicitly addresses ethics board clarification request and anticipated concerns from an applied domain expert.

**Expected Output:** A publication-ready figure-caption package that includes decisions, rationale, measurable criteria, and reviewer-resilient framing for Technical Positioning.

**Difficulty:** Beginner

**Category:** Reasoning

## 30. Engineer a Results Section for IEEE: compliance-first editing for camera-ready compliance check (IEEE IoT Journal) - results-to-insight translation

**Objective:** Convert technical narrative into clean, production-ready LaTeX structure. Prioritize novelty and produce publication-grade decisions for Result Narration.

**Prompt:** Create a LaTeX writing workflow for Result Narration: section skeleton, theorem/algorithm formatting guidance, table conventions, citation macros, and cross-reference hygiene. Include common formatting errors and fixes for IEEE IoT Journal submission checks. Project profile: discipline=biomedical engineering; dataset=multi-site clinical cohort; preferred method=transformer baseline; reviewer persona=systems performance reviewer; output schema=action timeline; risk scenario=conflicting baseline outcomes; timeline={timeline}; resources={resources}. Return outputs as numbered sections and end with an execution checklist.

**Example:** Example input: discipline=biomedical engineering; dataset=multi-site clinical cohort; timeline=14 weeks; resources=3 researchers + 2 GPUs; target venue=IEEE IoT Journal; reviewer persona=systems performance reviewer. Example outcome: IEEE-ready section draft with risk controls, reviewer-facing rationale, and milestone gates.

**Tips:** Draft content in semantic chunks before polishing visual layout. Ensure the action timeline explicitly addresses conflicting baseline outcomes and anticipated concerns from a systems performance reviewer.

**Expected Output:** A publication-ready IEEE-ready section draft that includes decisions, rationale, measurable criteria, and reviewer-resilient framing for Result Narration.

**Difficulty:** Intermediate

**Category:** Rebuttal

---

### 31. Prepare IEEE-Ready Technical Narrative: results storytelling workflow for IEEE conference paper deadline sprint (IEEE TPDS) - major-revision readiness

**Objective:** Prepare rigorous responses for committee or reviewer questioning. Prioritize rigor and produce publication-grade decisions for Limitations Framing.

**Prompt:** Simulate a high-pressure Q&A; on Limitations Framing. Generate 15 hard questions (methods, validity, novelty, limitations, impact) and produce concise, evidence-backed responses with fallback answers for uncertain data points. Include one slide cue per answer. Project profile: discipline=computational social science; dataset=open government policy data; preferred method=causal inference pipeline; reviewer persona=industry impact reviewer; output schema=risk register; risk scenario=missing metadata in source data; timeline={timeline}; resources={resources}. Return outputs as numbered sections and end with an execution checklist.

**Example:** Example input: discipline=computational social science; dataset=open government policy data; timeline=14 weeks; resources=3 researchers + 2 GPUs; target venue=IEEE TPDS; reviewer persona=industry impact reviewer. Example outcome: compliance checklist with risk controls, reviewer-facing rationale, and milestone gates.

**Tips:** Structure answers as claim -> evidence -> limitation -> next action. Ensure the risk register explicitly addresses missing metadata in source data and anticipated concerns from a industry impact reviewer.

**Expected Output:** A publication-ready compliance checklist that includes decisions, rationale, measurable criteria, and reviewer-resilient framing for Limitations Framing.

**Difficulty:** Advanced

**Category:** Validation

### 32. Write a High-Impact IEEE Introduction: IEEE structure workflow for IEEE Transactions submission cycle (IEEE Transactions) - replication-grade documentation

**Objective:** Create a contribution map that defends novelty against closest prior work and defines what is publishable. Prioritize reproducibility and produce publication-grade decisions for IEEE Formatting.

**Prompt:** Act as a senior research editor. Build a contribution architecture for IEEE Formatting in IEEE Transactions submission cycle targeting IEEE Transactions. Output sections: contribution claim stack, nearest-neighbor prior work comparison, differentiator evidence plan, failure-risk matrix, and a 30/60/90-day execution plan. Project profile: discipline=materials informatics; dataset=federated hospital dataset; preferred method=Bayesian hierarchical model; reviewer persona=editor focused on clarity; output schema=claim-evidence table; risk scenario=incomplete ablation coverage; timeline={timeline}; resources={resources}. Return outputs as numbered sections and end with an execution checklist.

**Example:** Example input: discipline=materials informatics; dataset=federated hospital dataset; timeline=14 weeks; resources=3 researchers + 2 GPUs; target venue=IEEE Transactions; reviewer persona=editor focused on clarity. Example outcome: figure-caption package with risk controls, reviewer-facing rationale, and milestone gates.

**Tips:** Force each claim to link to one measurable piece of evidence and one comparison baseline. Ensure the claim-evidence table explicitly addresses incomplete ablation coverage and anticipated concerns from a editor focused on clarity.

**Expected Output:** A publication-ready figure-caption package that includes decisions, rationale, measurable criteria, and reviewer-resilient framing for IEEE Formatting.

**Difficulty:** Expert

**Category:** Optimization

### 33. Optimize Abstract for IEEE Reviewers: caption and table enhancement for technical rewrite from preprint to IEEE (IEEE Access) - reviewer-resilient argumentation

**Objective:** Rewrite methods for reproducibility and procedural transparency. Prioritize clarity and produce publication-grade decisions for Technical Positioning.

**Prompt:** Rewrite the methodology around Technical Positioning for technical rewrite from preprint to IEEE so another lab can reproduce it without author contact. Include variable definitions, preprocessing chronology, model hyperparameters, instrumentation assumptions, and reproducibility checklist required for IEEE Access. Project profile: discipline=computational neuroscience; dataset=crowdsourced annotation dataset; preferred method=graph neural workflow; reviewer persona=skeptical statistician; output schema=decision matrix; risk scenario=dataset shift at deployment; timeline={timeline}; resources={resources}. Return outputs as numbered sections and end with an execution checklist.

**Example:** Example input: discipline=computational neuroscience; dataset=crowdsourced annotation dataset; timeline=14 weeks; resources=3 researchers + 2 GPUs; target venue=IEEE Access; reviewer persona=skeptical statistician. Example outcome: IEEE-ready section draft with risk controls, reviewer-facing rationale, and milestone gates.

**Tips:** Name every tool/version and include randomness-control policy. Ensure the decision matrix explicitly addresses dataset shift at deployment and anticipated concerns from a skeptical statistician.

**Expected Output:** A publication-ready IEEE-ready section draft that includes decisions, rationale, measurable criteria, and reviewer-resilient framing for Technical Positioning.

**Difficulty:** Beginner

**Category:** Planning

### 34. Engineer a Results Section for IEEE: compliance-first editing for camera-ready compliance check (IEEE IoT Journal) - ethics-by-design reporting

**Objective:** Craft concise, high-impact abstracts aligned with selective journal standards. Prioritize statistical power and produce publication-grade decisions for Result Narration.

**Prompt:** Write a Nature-style abstract for a study on Result Narration in camera-ready compliance check. Constrain to problem, approach, principal quantitative finding, boundary condition, and broader implication. Provide a weaker draft and then a stronger revised draft with rationale. Project profile: discipline=human-computer interaction; dataset=industrial telemetry stream; preferred method=mixed-methods protocol; reviewer persona=benchmarking specialist; output schema=compliance checklist; risk scenario=unexpected reviewer disagreement; timeline={timeline}; resources={resources}. Return outputs as numbered sections and end with an execution checklist.

**Example:** Example input: discipline=human-computer interaction; dataset=industrial telemetry stream; timeline=14 weeks; resources=3 researchers + 2 GPUs; target venue=IEEE IoT Journal; reviewer persona=benchmarking specialist. Example outcome: compliance checklist with risk controls, reviewer-facing rationale, and milestone gates.

**Tips:** One central claim per sentence keeps abstract logic clean and persuasive. Ensure the compliance checklist explicitly addresses unexpected reviewer disagreement and anticipated concerns from a benchmarking specialist.

**Expected Output:** A publication-ready compliance checklist that includes decisions, rationale, measurable criteria, and reviewer-resilient framing for Result Narration.

**Difficulty:** Intermediate

**Category:** Strategy

### 35. Prepare IEEE-Ready Technical Narrative: results storytelling workflow for IEEE conference paper deadline sprint (IEEE TPDS) - limitations-first transparency

**Objective:** Transform visuals into evidence-rich storytelling assets. Prioritize transferability and produce publication-grade decisions for Limitations Framing.

**Prompt:** Generate a figure strategy for Limitations Framing with publication-grade caption drafts. For each figure, define purpose, metric, axis design, uncertainty communication, and interpretation sentence expected by IEEE TPDS. Add one caption rewrite for non-expert readers. Project profile: discipline=robotics; dataset=city-scale mobility records; preferred method=time-series anomaly framework; reviewer persona=theory-oriented reviewer; output schema=citation repair map; risk scenario=high class imbalance; timeline={timeline}; resources={resources}. Return outputs as numbered sections and end with an execution checklist.

**Example:** Example input: discipline=robotics; dataset=city-scale mobility records; timeline=14 weeks; resources=3 researchers + 2 GPUs; target venue=IEEE TPDS; reviewer persona=theory-oriented reviewer. Example outcome: figure-caption package with risk controls, reviewer-facing rationale, and milestone gates.

**Tips:** Good captions stand alone and state what changed, by how much, and why it matters. Ensure the citation repair map explicitly addresses high class imbalance and anticipated concerns from a theory-oriented reviewer.

**Expected Output:** A publication-ready figure-caption package that includes decisions, rationale, measurable criteria, and reviewer-resilient framing for Limitations Framing.

**Difficulty:** Advanced

**Category:** Analysis

### 36. Write a High-Impact IEEE Introduction: IEEE structure workflow for IEEE Transactions submission cycle (IEEE Transactions) - cross-domain readability

**Objective:** Embed ethics and compliance checks into the technical workflow. Prioritize ethical compliance and produce publication-grade decisions for IEEE Formatting.

**Prompt:** Build an ethics checklist and mitigation plan for IEEE Formatting in IEEE Transactions submission cycle. Include fairness risks, privacy boundaries, human-subject concerns, reporting transparency, and audit evidence expected for IEEE Transactions review. Project profile: discipline=digital health; dataset=public genomics panel; preferred method=hybrid rule-neural model; reviewer persona=methodology purist; output schema=figure-caption protocol; risk scenario=inter-annotator disagreement; timeline={timeline}; resources={resources}. Return outputs as numbered sections and end with an execution checklist.

**Example:** Example input: discipline=digital health; dataset=public genomics panel; timeline=14 weeks; resources=3 researchers + 2 GPUs; target venue=IEEE Transactions; reviewer persona=methodology purist. Example outcome: IEEE-ready section draft with risk controls, reviewer-facing rationale, and milestone gates.

**Tips:** Translate ethical risks into actionable controls with owner and verification evidence. Ensure the figure-caption protocol explicitly addresses inter-annotator disagreement and anticipated concerns from a methodology purist.

**Expected Output:** A publication-ready IEEE-ready section draft that includes decisions, rationale, measurable criteria, and reviewer-resilient framing for IEEE Formatting.

**Difficulty:** Expert

**Category:** Reasoning

### 37. Optimize Abstract for IEEE Reviewers: caption and table enhancement for technical rewrite from preprint to IEEE (IEEE Access) - impact-focused communication

**Objective:** Choose venue strategy, narrative framing, and revision sequencing. Prioritize computational efficiency and produce publication-grade decisions for Technical Positioning.

**Prompt:** Design a publication strategy for Technical Positioning: venue ladder (A-plan/B-plan), novelty framing options, deadline-aligned writing sprints, and reviewer-risk scenarios. Include a branch for conference-first then journal-extension path for IEEE Access. Project profile: discipline=machine learning; dataset=benchmark tabular risk dataset; preferred method=multi-objective optimizer; reviewer persona=interdisciplinary committee member; output schema=statistical decision tree; risk scenario=small sample size constraints; timeline={timeline}; resources={resources}. Return outputs as numbered sections and end with an execution checklist.

**Example:** Example input: discipline=machine learning; dataset=benchmark tabular risk dataset; timeline=14 weeks; resources=3 researchers + 2 GPUs; target venue=IEEE Access; reviewer persona=interdisciplinary committee member. Example outcome: compliance checklist with risk controls, reviewer-facing rationale, and milestone gates.

**Tips:** Plan fallback venue narratives early to reduce resubmission cycle time. Ensure the statistical decision tree explicitly addresses small sample size constraints and anticipated concerns from a interdisciplinary committee member.

**Expected Output:** A publication-ready compliance checklist that includes decisions, rationale, measurable criteria, and reviewer-resilient framing for Technical Positioning.

**Difficulty:** Beginner

**Category:** Rebuttal

### 38. Engineer a Results Section for IEEE: compliance-first editing for camera-ready compliance check (IEEE IoT Journal) - publishable novelty framing

**Objective:** Turn skeptical reviewer criticism into a persuasive, evidence-linked response workflow. Prioritize clinical relevance and produce publication-grade decisions for Result Narration.

**Prompt:** Assume Reviewer #2 challenges Result Narration for IEEE IoT Journal. Draft a response package with: acknowledgement sentence, technical clarification, direct manuscript change, optional added experiment, and fallback wording if resources are limited. Provide line-level mapping format for revision tracking. Project profile: discipline=climate informatics; dataset=multi-modal image-text corpus; preferred method=semi-supervised training setup; reviewer persona=ethics compliance reviewer; output schema=ablation plan sheet; risk scenario=compute budget reduction; timeline={timeline}; resources={resources}. Return outputs as numbered sections and end with an execution checklist.

**Example:** Example input: discipline=climate informatics; dataset=multi-modal image-text corpus; timeline=14 weeks; resources=3 researchers + 2 GPUs; target venue=IEEE IoT Journal; reviewer persona=ethics compliance reviewer. Example outcome: figure-caption package with risk controls, reviewer-facing rationale, and milestone gates.

**Tips:** Use respectful tone and separate explanation, action, and manuscript delta into distinct bullets. Ensure the ablation plan sheet explicitly addresses compute budget reduction and anticipated concerns from a ethics compliance reviewer.

**Expected Output:** A publication-ready figure-caption package that includes decisions, rationale, measurable criteria, and reviewer-resilient framing for Result Narration.

**Difficulty:** Intermediate

**Category:** Validation

### 39. Prepare IEEE-Ready Technical Narrative: results storytelling workflow for IEEE conference paper deadline sprint (IEEE TPDS) - practical deployment framing

**Objective:** Plan a high-confidence major revision package for journal resubmission. Prioritize publication readiness and produce publication-grade decisions for Limitations Framing.

**Prompt:** Create a major revision plan for an Elsevier-style decision letter focused on Limitations Framing. Include comment clustering, evidence plan, timeline by dependency, added-analysis options, and response-letter structure that anticipates editor priorities for IEEE TPDS. Project profile: discipline=cybersecurity; dataset=longitudinal sensor dataset; preferred method=counterfactual evaluation approach; reviewer persona=reproducibility auditor; output schema=rebuttal response grid; risk scenario=time-limited resubmission window; timeline={timeline}; resources={resources}. Return outputs as numbered sections and end with an execution checklist.

**Example:** Example input: discipline=cybersecurity; dataset=longitudinal sensor dataset; timeline=14 weeks; resources=3 researchers + 2 GPUs; target venue=IEEE TPDS; reviewer persona=reproducibility auditor. Example outcome: IEEE-ready section draft with risk controls, reviewer-facing rationale, and milestone gates.

**Tips:** Group reviewer comments by technical dependency to prevent contradictory edits. Ensure the rebuttal response grid explicitly addresses time-limited resubmission window and anticipated concerns from a reproducibility auditor.

**Expected Output:** A publication-ready IEEE-ready section draft that includes decisions, rationale, measurable criteria, and reviewer-resilient framing for Limitations Framing.

**Difficulty:** Advanced

**Category:** Optimization

### 40. Write a High-Impact IEEE Introduction: IEEE structure workflow for IEEE Transactions submission cycle (IEEE Transactions) - method comparison clarity

**Objective:** Select robust statistical strategy and interpretation logic. Prioritize novelty and produce publication-grade decisions for IEEE Formatting.

**Prompt:** Design a statistical analysis workflow for IEEE Formatting with assumptions, test-selection logic, effect-size reporting, multiplicity correction, and uncertainty interpretation. Output a decision tree that maps data conditions to recommended tests for IEEE Transactions. Project profile: discipline=biomedical engineering; dataset=multi-site clinical cohort; preferred method=transformer baseline; reviewer persona=applied domain expert; output schema=section rewrite pack; risk scenario=ethics board clarification request; timeline={timeline}; resources={resources}. Return outputs as numbered sections and end with an execution checklist.

**Example:** Example input: discipline=biomedical engineering; dataset=multi-site clinical cohort; timeline=14 weeks; resources=3 researchers + 2 GPUs; target venue=IEEE Transactions; reviewer persona=applied domain expert. Example outcome: compliance checklist with risk controls, reviewer-facing rationale, and milestone gates.

**Tips:** Pair p-values with effect sizes and confidence intervals in every result claim. Ensure the section rewrite pack explicitly addresses ethics board clarification request and anticipated concerns from a applied domain expert.

**Expected Output:** A publication-ready compliance checklist that includes decisions, rationale, measurable criteria, and reviewer-resilient framing for IEEE Formatting.

**Difficulty:** Expert

**Category:** Planning

## 41. Optimize Abstract for IEEE Reviewers: caption and table enhancement for technical rewrite from preprint to IEEE (IEEE Access) - editorial risk reduction

**Objective:** Detect weak citation support and strengthen scholarly positioning. Prioritize rigor and produce publication-grade decisions for Technical Positioning.

**Prompt:** Analyze a draft on Technical Positioning and identify citation gaps by claim type: foundational, comparative, methodological, and limitation-related. Return a prioritized fill plan with query phrases, likely source types, and insertion points tailored to IEEE Access. Project profile: discipline=computational social science; dataset=open government policy data; preferred method=causal inference pipeline; reviewer persona=systems performance reviewer; output schema=action timeline; risk scenario=conflicting baseline outcomes; timeline={timeline}; resources={resources}. Return outputs as numbered sections and end with an execution checklist.

**Example:** Example input: discipline=computational social science; dataset=open government policy data; timeline=14 weeks; resources=3 researchers + 2 GPUs; target venue=IEEE Access; reviewer persona=systems performance reviewer. Example outcome: figure-caption package with risk controls, reviewer-facing rationale, and milestone gates.

**Tips:** Flag unsupported superlatives first; they trigger avoidable reviewer criticism. Ensure the action timeline explicitly addresses conflicting baseline outcomes and anticipated concerns from a systems performance reviewer.

**Expected Output:** A publication-ready figure-caption package that includes decisions, rationale, measurable criteria, and reviewer-resilient framing for Technical Positioning.

**Difficulty:** Beginner

**Category:** Strategy

## 42. Engineer a Results Section for IEEE: compliance-first editing for camera-ready compliance check (IEEE IoT Journal) - venue-specific optimization

**Objective:** Convert raw metrics into defensible scientific interpretation. Prioritize reproducibility and produce publication-grade decisions for Result Narration.

**Prompt:** Interpret results for Result Narration using a claim-evidence map: primary findings, uncertainty envelope, competing explanations, boundary conditions, and implications for future work in IEEE IoT Journal. Add one paragraph that preempts overclaiming. Project profile: discipline=materials informatics; dataset=federated hospital dataset; preferred method=Bayesian hierarchical model; reviewer persona=industry impact reviewer; output schema=risk register; risk scenario=missing metadata in source data; timeline={timeline}; resources={resources}. Return outputs as numbered sections and end with an execution checklist.

**Example:** Example input: discipline=materials informatics; dataset=federated hospital dataset; timeline=14 weeks; resources=3 researchers + 2 GPUs; target venue=IEEE IoT Journal; reviewer persona=industry impact reviewer. Example outcome: IEEE-ready section draft with risk controls, reviewer-facing rationale, and milestone gates.

**Tips:** State what the results do not prove as clearly as what they do prove. Ensure the risk register explicitly addresses missing metadata in source data and anticipated concerns from a industry impact reviewer.

**Expected Output:** A publication-ready IEEE-ready section draft that includes decisions, rationale, measurable criteria, and reviewer-resilient framing for Result Narration.

**Difficulty:** Intermediate

**Category:** Analysis

### 43. Prepare IEEE-Ready Technical Narrative: results storytelling workflow for IEEE conference paper deadline sprint (IEEE TPDS) - decision traceability

**Objective:** Detect non-obvious research gaps and convert them into testable opportunities. Prioritize clarity and produce publication-grade decisions for Limitations Framing.

**Prompt:** You are a literature forensics specialist. From the context below, identify unresolved contradictions in Limitations Framing and rank them by impact and tractability. Then design three testable gap statements, each with required datasets, threat-to-validity notes, and likely reviewer objections for IEEE TPDS. Project profile: discipline=computational neuroscience; dataset=crowdsourced annotation dataset; preferred method=graph neural workflow; reviewer persona=editor focused on clarity; output schema=claim-evidence table; risk scenario=incomplete ablation coverage; timeline={timeline}; resources={resources}. Return outputs as numbered sections and end with an execution checklist.

**Example:** Example input: discipline=computational neuroscience; dataset=crowdsourced annotation dataset; timeline=14 weeks; resources=3 researchers + 2 GPUs; target venue=IEEE TPDS; reviewer persona=editor focused on clarity. Example outcome: compliance checklist with risk controls, reviewer-facing rationale, and milestone gates.

**Tips:** Distinguish 'no evidence exists' from 'evidence exists but conflicts' to avoid weak gap claims. Ensure the claim-evidence table explicitly addresses incomplete ablation coverage and anticipated concerns from a editor focused on clarity.

**Expected Output:** A publication-ready compliance checklist that includes decisions, rationale, measurable criteria, and reviewer-resilient framing for Limitations Framing.

**Difficulty:** Advanced

**Category:** Writing

### 44. Write a High-Impact IEEE Introduction: IEEE structure workflow for IEEE Transactions submission cycle (IEEE Transactions) - citation-strength positioning

**Objective:** Produce section drafts compliant with high-impact conference and journal conventions. Prioritize statistical power and produce publication-grade decisions for IEEE Formatting.

**Prompt:** Generate a publication-ready section for IEEE Formatting tuned for IEEE Transactions. Enforce concise technical style, explicit contributions, and strong figure/table callouts. Provide two style variants: IEEE Transactions tone and ACM conference tone with sentence-level rewrites. Project profile: discipline=human-computer interaction; dataset=industrial telemetry stream; preferred method=mixed-methods protocol; reviewer persona=skeptical statistician; output schema=decision matrix; risk scenario=dataset shift at deployment; timeline={timeline}; resources={resources}. Return outputs as numbered sections and end with an execution checklist.

**Example:** Example input: discipline=human-computer interaction; dataset=industrial telemetry stream; timeline=14 weeks; resources=3 researchers + 2 GPUs; target venue=IEEE Transactions; reviewer persona=skeptical statistician. Example outcome: figure-caption package with risk controls, reviewer-facing rationale, and milestone gates.

**Tips:** Avoid generic claims; anchor every paragraph with result-oriented language. Ensure the decision matrix explicitly addresses dataset shift at deployment and anticipated concerns from a skeptical statistician.

**Expected Output:** A publication-ready figure-caption package that includes decisions, rationale, measurable criteria, and reviewer-resilient framing for IEEE Formatting.

**Difficulty:** Expert

**Category:** Publication

## 45. Optimize Abstract for IEEE Reviewers: caption and table enhancement for technical rewrite from preprint to IEEE (IEEE Access) - defense-ready reasoning

**Objective:** Pressure-test experimental design before expensive execution. Prioritize transferability and produce publication-grade decisions for Technical Positioning.

**Prompt:** Audit the experimental design for Technical Positioning. Produce control/ablation matrix, confound analysis, data leakage checks, minimum sample strategy, and statistical power guardrails suitable for IEEE Access reviewers. Include a stop/go decision protocol. Project profile: discipline=robotics; dataset=city-scale mobility records; preferred method=time-series anomaly framework; reviewer persona=benchmarking specialist; output schema=compliance checklist; risk scenario=unexpected reviewer disagreement; timeline={timeline}; resources={resources}. Return outputs as numbered sections and end with an execution checklist.

**Example:** Example input: discipline=robotics; dataset=city-scale mobility records; timeline=14 weeks; resources=3 researchers + 2 GPUs; target venue=IEEE Access; reviewer persona=benchmarking specialist. Example outcome: IEEE-ready section draft with risk controls, reviewer-facing rationale, and milestone gates.

**Tips:** Design ablations to isolate one causal factor at a time. Ensure the compliance checklist explicitly addresses unexpected reviewer disagreement and anticipated concerns from a benchmarking specialist.

**Expected Output:** A publication-ready IEEE-ready section draft that includes decisions, rationale, measurable criteria, and reviewer-resilient framing for Technical Positioning.

**Difficulty:** Beginner

**Category:** Validation

## 46. Engineer a Results Section for IEEE: compliance-first editing for camera-ready compliance check (IEEE IoT Journal) - high-confidence statistical reporting

**Objective:** Convert technical narrative into clean, production-ready LaTeX structure. Prioritize ethical compliance and produce publication-grade decisions for Result Narration.

**Prompt:** Create a LaTeX writing workflow for Result Narration: section skeleton, theorem/algorithm formatting guidance, table conventions, citation macros, and cross-reference hygiene. Include common formatting errors and fixes for IEEE IoT Journal submission checks. Project profile: discipline=digital health; dataset=public genomics panel; preferred method=hybrid rule-neural model; reviewer persona=theory-oriented reviewer; output schema=citation repair map; risk scenario=high class imbalance; timeline={timeline}; resources={resources}. Return outputs as numbered sections and end with an execution checklist.

**Example:** Example input: discipline=digital health; dataset=public genomics panel; timeline=14 weeks; resources=3 researchers + 2 GPUs; target venue=IEEE IoT Journal; reviewer persona=theory-oriented reviewer. Example outcome: compliance checklist with risk controls, reviewer-facing rationale, and milestone gates.

**Tips:** Draft content in semantic chunks before polishing visual layout. Ensure the citation repair map explicitly addresses high class imbalance and anticipated concerns from a theory-oriented reviewer.

**Expected Output:** A publication-ready compliance checklist that includes decisions, rationale, measurable criteria, and reviewer-resilient framing for Result Narration.

**Difficulty:** Intermediate

**Category:** Optimization

## 47. Prepare IEEE-Ready Technical Narrative: results storytelling workflow for IEEE conference paper deadline sprint (IEEE TPDS) - evidence-first writing

**Objective:** Prepare rigorous responses for committee or reviewer questioning. Prioritize computational efficiency and produce publication-grade decisions for Limitations Framing.

**Prompt:** Simulate a high-pressure Q&A; on Limitations Framing. Generate 15 hard questions (methods, validity, novelty, limitations, impact) and produce concise, evidence-backed responses with fallback answers for uncertain data points. Include one slide cue per answer. Project profile: discipline=machine learning; dataset=benchmark tabular risk dataset; preferred method=multi-objective optimizer; reviewer persona=methodology purist; output schema=figure-caption protocol; risk scenario=inter-annotator disagreement; timeline={timeline}; resources={resources}. Return outputs as numbered sections and end with an execution checklist.

**Example:** Example input: discipline=machine learning; dataset=benchmark tabular risk dataset; timeline=14 weeks; resources=3 researchers + 2 GPUs; target venue=IEEE TPDS; reviewer persona=methodology purist. Example outcome: figure-caption package with risk controls, reviewer-facing rationale, and milestone gates.

**Tips:** Structure answers as claim -> evidence -> limitation -> next action. Ensure the figure-caption protocol explicitly addresses inter-annotator disagreement and anticipated concerns from a methodology purist.

**Expected Output:** A publication-ready figure-caption package that includes decisions, rationale, measurable criteria, and reviewer-resilient framing for Limitations Framing.

**Difficulty:** Advanced

**Category:** Planning

## 48. Write a High-Impact IEEE Introduction: IEEE structure workflow for IEEE Transactions submission cycle (IEEE Transactions) - hypothesis stress testing

**Objective:** Create a contribution map that defends novelty against closest prior work and defines what is publishable. Prioritize clinical relevance and produce publication-grade decisions for IEEE Formatting.

**Prompt:** Act as a senior research editor. Build a contribution architecture for IEEE Formatting in IEEE Transactions submission cycle targeting IEEE Transactions. Output sections: contribution claim stack, nearest-neighbor prior work comparison, differentiator evidence plan, failure-risk matrix, and a 30/60/90-day execution plan. Project profile: discipline=climate informatics; dataset=multi-modal image-text corpus; preferred method=semi-supervised training setup; reviewer persona=interdisciplinary committee member; output schema=statistical decision tree; risk scenario=small sample size constraints; timeline={timeline}; resources={resources}. Return outputs as numbered sections and end with an execution checklist.

**Example:** Example input: discipline=climate informatics; dataset=multi-modal image-text corpus; timeline=14 weeks; resources=3 researchers + 2 GPUs; target venue=IEEE Transactions; reviewer persona=interdisciplinary committee member. Example outcome: IEEE-ready section draft with risk controls, reviewer-facing rationale, and milestone gates.

**Tips:** Force each claim to link to one measurable piece of evidence and one comparison baseline. Ensure the statistical decision tree explicitly addresses small sample size constraints and anticipated concerns from a interdisciplinary committee member.

**Expected Output:** A publication-ready IEEE-ready section draft that includes decisions, rationale, measurable criteria, and reviewer-resilient framing for IEEE Formatting.

**Difficulty:** Expert

**Category:** Strategy

## 49. Optimize Abstract for IEEE Reviewers: caption and table enhancement for technical rewrite from preprint to IEEE (IEEE Access) - results-to-insight translation

**Objective:** Rewrite methods for reproducibility and procedural transparency. Prioritize publication readiness and produce publication-grade decisions for Technical Positioning.

**Prompt:** Rewrite the methodology around Technical Positioning for technical rewrite from preprint to IEEE so another lab can reproduce it without author contact. Include variable definitions, preprocessing chronology, model hyperparameters, instrumentation assumptions, and reproducibility checklist required for IEEE Access. Project profile: discipline=cybersecurity; dataset=longitudinal sensor dataset; preferred method=counterfactual evaluation

approach; reviewer persona=ethics compliance reviewer; output schema=ablation plan sheet; risk scenario=compute budget reduction; timeline={timeline}; resources={resources}. Return outputs as numbered sections and end with an execution checklist.

**Example:** Example input: discipline=cybersecurity; dataset=longitudinal sensor dataset; timeline=14 weeks; resources=3 researchers + 2 GPUs; target venue=IEEE Access; reviewer persona=ethics compliance reviewer. Example outcome: compliance checklist with risk controls, reviewer-facing rationale, and milestone gates.

**Tips:** Name every tool/version and include randomness-control policy. Ensure the ablation plan sheet explicitly addresses compute budget reduction and anticipated concerns from a ethics compliance reviewer.

**Expected Output:** A publication-ready compliance checklist that includes decisions, rationale, measurable criteria, and reviewer-resilient framing for Technical Positioning.

**Difficulty:** Beginner

**Category:** Analysis

## 50. Engineer a Results Section for IEEE: compliance-first editing for camera-ready compliance check (IEEE IoT Journal) - major-revision readiness

**Objective:** Craft concise, high-impact abstracts aligned with selective journal standards. Prioritize novelty and produce publication-grade decisions for Result Narration.

**Prompt:** Write a Nature-style abstract for a study on Result Narration in camera-ready compliance check. Constrain to problem, approach, principal quantitative finding, boundary condition, and broader implication. Provide a weaker draft and then a stronger revised draft with rationale. Project profile: discipline=biomedical engineering; dataset=multi-site clinical cohort; preferred method=transformer baseline; reviewer persona=reproducibility auditor; output schema=rebuttal response grid; risk scenario=time-limited resubmission window; timeline={timeline}; resources={resources}. Return outputs as numbered sections and end with an execution checklist.

**Example:** Example input: discipline=biomedical engineering; dataset=multi-site clinical cohort; timeline=14 weeks; resources=3 researchers + 2 GPUs; target venue=IEEE IoT Journal; reviewer persona=reproducibility auditor. Example outcome: figure-caption package with risk controls, reviewer-facing rationale, and milestone gates.

**Tips:** One central claim per sentence keeps abstract logic clean and persuasive. Ensure the rebuttal response grid explicitly addresses time-limited resubmission window and anticipated concerns from a reproducibility auditor.

**Expected Output:** A publication-ready figure-caption package that includes decisions, rationale, measurable criteria, and reviewer-resilient framing for Result Narration.

**Difficulty:** Intermediate

**Category:** Writing

## 51. Prepare IEEE-Ready Technical Narrative: results storytelling workflow for IEEE conference paper deadline sprint (IEEE TPDS) - replication-grade documentation

**Objective:** Transform visuals into evidence-rich storytelling assets. Prioritize rigor and produce publication-grade decisions for Limitations Framing.

**Prompt:** Generate a figure strategy for Limitations Framing with publication-grade caption drafts. For each figure, define purpose, metric, axis design, uncertainty communication, and interpretation sentence expected by IEEE TPDS. Add one caption rewrite for non-expert readers. Project profile: discipline=computational social science; dataset=open government policy data; preferred method=causal inference pipeline; reviewer persona=applied domain expert; output schema=section rewrite pack; risk scenario=ethics board clarification request; timeline={timeline}; resources={resources}. Return outputs as numbered sections and end with an execution checklist.

**Example:** Example input: discipline=computational social science; dataset=open government policy data; timeline=14 weeks; resources=3 researchers + 2 GPUs; target venue=IEEE TPDS; reviewer persona=applied domain expert. Example outcome: IEEE-ready section draft with risk controls, reviewer-facing rationale, and milestone gates.

**Tips:** Good captions stand alone and state what changed, by how much, and why it matters. Ensure the section rewrite pack explicitly addresses ethics board clarification request and anticipated concerns from a applied domain expert.

**Expected Output:** A publication-ready IEEE-ready section draft that includes decisions, rationale, measurable criteria, and reviewer-resilient framing for Limitations Framing.

**Difficulty:** Advanced

**Category:** Publication

## 52. Write a High-Impact IEEE Introduction: IEEE structure workflow for IEEE Transactions submission cycle (IEEE Transactions) - reviewer-resilient argumentation

**Objective:** Embed ethics and compliance checks into the technical workflow. Prioritize reproducibility and produce publication-grade decisions for IEEE Formatting.

**Prompt:** Build an ethics checklist and mitigation plan for IEEE Formatting in IEEE Transactions submission cycle. Include fairness risks, privacy boundaries, human-subject concerns, reporting transparency, and audit evidence expected for IEEE Transactions review. Project profile: discipline=materials informatics; dataset=federated hospital dataset; preferred method=Bayesian hierarchical model; reviewer persona=systems performance reviewer; output schema=action timeline; risk scenario=conflicting baseline outcomes; timeline={timeline}; resources={resources}. Return outputs as numbered sections and end with an execution checklist.

**Example:** Example input: discipline=materials informatics; dataset=federated hospital dataset; timeline=14 weeks; resources=3 researchers + 2 GPUs; target venue=IEEE Transactions; reviewer persona=systems performance reviewer. Example outcome: compliance checklist with risk controls, reviewer-facing rationale, and milestone gates.

**Tips:** Translate ethical risks into actionable controls with owner and verification evidence. Ensure the action timeline explicitly addresses conflicting baseline outcomes and anticipated concerns from a systems performance reviewer.

**Expected Output:** A publication-ready compliance checklist that includes decisions, rationale, measurable criteria, and reviewer-resilient framing for IEEE Formatting.

**Difficulty:** Expert

**Category:** Methodology

## 53. Optimize Abstract for IEEE Reviewers: caption and table enhancement for technical rewrite from preprint to IEEE (IEEE Access) - ethics-by-design reporting

**Objective:** Choose venue strategy, narrative framing, and revision sequencing. Prioritize clarity and produce publication-grade decisions for Technical Positioning.

**Prompt:** Design a publication strategy for Technical Positioning: venue ladder (A-plan/B-plan), novelty framing options, deadline-aligned writing sprints, and reviewer-risk scenarios. Include a branch for conference-first then journal-extension path for IEEE Access. Project profile: discipline=computational neuroscience; dataset=crowdsourced annotation dataset; preferred method=graph neural workflow; reviewer persona=industry impact reviewer; output schema=risk register; risk scenario=missing metadata in source data; timeline={timeline}; resources={resources}. Return outputs as numbered sections and end with an execution checklist.

**Example:** Example input: discipline=computational neuroscience; dataset=crowdsourced annotation dataset; timeline=14 weeks; resources=3 researchers + 2 GPUs; target venue=IEEE Access; reviewer persona=industry impact reviewer. Example outcome: figure-caption package with risk controls, reviewer-facing rationale, and milestone gates.

**Tips:** Plan fallback venue narratives early to reduce resubmission cycle time. Ensure the risk register explicitly addresses missing metadata in source data and anticipated concerns from a industry impact reviewer.

**Expected Output:** A publication-ready figure-caption package that includes decisions, rationale, measurable criteria, and reviewer-resilient framing for Technical Positioning.

**Difficulty:** Beginner

**Category:** Execution

## 54. Engineer a Results Section for IEEE: compliance-first editing for camera-ready compliance check (IEEE IoT Journal) - limitations-first transparency

**Objective:** Turn skeptical reviewer criticism into a persuasive, evidence-linked response workflow. Prioritize statistical power and produce publication-grade decisions for Result Narration.

**Prompt:** Assume Reviewer #2 challenges Result Narration for IEEE IoT Journal. Draft a response package with: acknowledgement sentence, technical clarification, direct manuscript change, optional added experiment, and fallback wording if resources are limited. Provide line-level mapping format for revision tracking. Project profile: discipline=human-computer interaction; dataset=industrial telemetry stream; preferred method=mixed-methods protocol; reviewer persona=editor focused on clarity; output schema=claim-evidence table; risk scenario=incomplete ablation coverage; timeline={timeline}; resources={resources}. Return outputs as numbered sections and end with an execution checklist.

**Example:** Example input: discipline=human-computer interaction; dataset=industrial telemetry stream; timeline=14 weeks; resources=3 researchers + 2 GPUs; target venue=IEEE IoT Journal; reviewer persona=editor focused on clarity. Example outcome: IEEE-ready section draft with risk controls, reviewer-facing rationale, and milestone gates.

**Tips:** Use respectful tone and separate explanation, action, and manuscript delta into distinct bullets. Ensure the claim-evidence table explicitly addresses incomplete ablation coverage and anticipated concerns from a editor focused on clarity.

**Expected Output:** A publication-ready IEEE-ready section draft that includes decisions, rationale, measurable criteria, and reviewer-resilient framing for Result Narration.

**Difficulty:** Intermediate

**Category:** Planning

## 55. Prepare IEEE-Ready Technical Narrative: results storytelling workflow for IEEE conference paper deadline sprint (IEEE TPDS) - cross-domain readability

**Objective:** Plan a high-confidence major revision package for journal resubmission. Prioritize transferability and produce publication-grade decisions for Limitations Framing.

**Prompt:** Create a major revision plan for an Elsevier-style decision letter focused on Limitations Framing. Include comment clustering, evidence plan, timeline by dependency, added-analysis options, and response-letter structure that anticipates editor priorities for IEEE TPDS. Project profile: discipline=robotics; dataset=city-scale mobility records; preferred method=time-series anomaly framework; reviewer persona=skeptical statistician; output schema=decision matrix; risk scenario=dataset shift at deployment; timeline={timeline}; resources={resources}. Return outputs as numbered sections and end with an execution checklist.

**Example:** Example input: discipline=robotics; dataset=city-scale mobility records; timeline=14 weeks; resources=3 researchers + 2 GPUs; target venue=IEEE TPDS; reviewer persona=skeptical statistician. Example outcome: compliance checklist with risk controls, reviewer-facing rationale, and milestone gates.

**Tips:** Group reviewer comments by technical dependency to prevent contradictory edits. Ensure the decision matrix explicitly addresses dataset shift at deployment and anticipated concerns from a skeptical statistician.

**Expected Output:** A publication-ready compliance checklist that includes decisions, rationale, measurable criteria, and reviewer-resilient framing for Limitations Framing.

**Difficulty:** Advanced

**Category:** Strategy

## 56. Write a High-Impact IEEE Introduction: IEEE structure workflow for IEEE Transactions submission cycle (IEEE Transactions) - impact-focused communication

**Objective:** Select robust statistical strategy and interpretation logic. Prioritize ethical compliance and produce publication-grade decisions for IEEE Formatting.

**Prompt:** Design a statistical analysis workflow for IEEE Formatting with assumptions, test-selection logic, effect-size reporting, multiplicity correction, and uncertainty interpretation. Output a decision tree that maps data conditions to recommended tests for IEEE Transactions. Project profile: discipline=digital health; dataset=public genomics panel; preferred method=hybrid rule-neural model; reviewer persona=benchmarking specialist; output schema=compliance checklist; risk scenario=unexpected reviewer disagreement; timeline={timeline}; resources={resources}. Return outputs as numbered sections and end with an execution checklist.

**Example:** Example input: discipline=digital health; dataset=public genomics panel; timeline=14 weeks; resources=3 researchers + 2 GPUs; target venue=IEEE Transactions; reviewer persona=benchmarking specialist. Example outcome: figure-caption package with risk controls, reviewer-facing rationale, and milestone gates.

**Tips:** Pair p-values with effect sizes and confidence intervals in every result claim. Ensure the compliance checklist explicitly addresses unexpected reviewer disagreement and anticipated concerns from a benchmarking specialist.

**Expected Output:** A publication-ready figure-caption package that includes decisions, rationale, measurable criteria, and reviewer-resilient framing for IEEE Formatting.

**Difficulty:** Expert

**Category:** Analysis

## 57. Optimize Abstract for IEEE Reviewers: caption and table enhancement for technical rewrite from preprint to IEEE (IEEE Access) - publishable novelty framing

**Objective:** Detect weak citation support and strengthen scholarly positioning. Prioritize computational efficiency and produce publication-grade decisions for Technical Positioning.

**Prompt:** Analyze a draft on Technical Positioning and identify citation gaps by claim type: foundational, comparative, methodological, and limitation-related. Return a prioritized fill plan with query phrases, likely source types, and insertion points tailored to IEEE Access. Project profile: discipline=machine learning; dataset=benchmark tabular risk dataset; preferred method=multi-objective optimizer; reviewer persona=theory-oriented reviewer; output schema=citation repair map; risk scenario=high class imbalance; timeline={timeline}; resources={resources}. Return outputs as numbered sections and end with an execution checklist.

**Example:** Example input: discipline=machine learning; dataset=benchmark tabular risk dataset; timeline=14 weeks; resources=3 researchers + 2 GPUs; target venue=IEEE Access; reviewer persona=theory-oriented reviewer. Example outcome: IEEE-ready section draft with risk controls, reviewer-facing rationale, and milestone gates.

**Tips:** Flag unsupported superlatives first; they trigger avoidable reviewer criticism. Ensure the citation repair map explicitly addresses high class imbalance and anticipated concerns from a theory-oriented reviewer.

**Expected Output:** A publication-ready IEEE-ready section draft that includes decisions, rationale, measurable criteria, and reviewer-resilient framing for Technical Positioning.

**Difficulty:** Beginner

**Category:** Writing

## 58. Engineer a Results Section for IEEE: compliance-first editing for camera-ready compliance check (IEEE IoT Journal) - practical deployment framing

**Objective:** Convert raw metrics into defensible scientific interpretation. Prioritize clinical relevance and produce publication-grade decisions for Result Narration.

**Prompt:** Interpret results for Result Narration using a claim-evidence map: primary findings, uncertainty envelope, competing explanations, boundary conditions, and implications for future work in IEEE IoT Journal. Add one paragraph that preempts overclaiming. Project profile: discipline=climate informatics; dataset=multi-modal image-text corpus; preferred method=semi-supervised training setup; reviewer persona=methodology purist; output schema=figure-caption protocol; risk scenario=inter-annotator disagreement; timeline={timeline}; resources={resources}. Return outputs as numbered sections and end with an execution checklist.

**Example:** Example input: discipline=climate informatics; dataset=multi-modal image-text corpus; timeline=14 weeks; resources=3 researchers + 2 GPUs; target venue=IEEE IoT Journal; reviewer persona=methodology purist. Example outcome: compliance checklist with risk controls, reviewer-facing rationale, and milestone gates.

**Tips:** State what the results do not prove as clearly as what they do prove. Ensure the figure-caption protocol explicitly addresses inter-annotator disagreement and anticipated concerns from a methodology purist.

**Expected Output:** A publication-ready compliance checklist that includes decisions, rationale, measurable criteria, and reviewer-resilient framing for Result Narration.

**Difficulty:** Intermediate

**Category:** Publication

## 59. Prepare IEEE-Ready Technical Narrative: results storytelling workflow for IEEE conference paper deadline sprint (IEEE TPDS) - method comparison clarity

**Objective:** Detect non-obvious research gaps and convert them into testable opportunities. Prioritize publication readiness and produce publication-grade decisions for Limitations Framing.

**Prompt:** You are a literature forensics specialist. From the context below, identify unresolved contradictions in Limitations Framing and rank them by impact and tractability. Then design three testable gap statements, each with required datasets, threat-to-validity notes, and likely reviewer objections for IEEE TPDS. Project profile: discipline=cybersecurity; dataset=longitudinal sensor dataset; preferred method=counterfactual evaluation approach; reviewer persona=interdisciplinary committee member; output schema=statistical decision tree; risk scenario=small sample size constraints; timeline={timeline}; resources={resources}. Return outputs as numbered sections and end with an execution checklist.

**Example:** Example input: discipline=cybersecurity; dataset=longitudinal sensor dataset; timeline=14 weeks; resources=3 researchers + 2 GPUs; target venue=IEEE TPDS; reviewer persona=interdisciplinary committee member. Example outcome: figure-caption package with risk controls, reviewer-facing rationale, and milestone gates.

**Tips:** Distinguish 'no evidence exists' from 'evidence exists but conflicts' to avoid weak gap claims. Ensure the statistical decision tree explicitly addresses small sample size constraints and anticipated concerns from a interdisciplinary committee member.

**Expected Output:** A publication-ready figure-caption package that includes decisions, rationale, measurable criteria, and reviewer-resilient framing for Limitations Framing.

**Difficulty:** Advanced

**Category:** Methodology

## 60. Write a High-Impact IEEE Introduction: IEEE structure workflow for IEEE Transactions submission cycle (IEEE Transactions) - editorial risk reduction

**Objective:** Produce section drafts compliant with high-impact conference and journal conventions. Prioritize novelty and produce publication-grade decisions for IEEE Formatting.

**Prompt:** Generate a publication-ready section for IEEE Formatting tuned for IEEE Transactions. Enforce concise technical style, explicit contributions, and strong figure/table callouts. Provide two style variants: IEEE Transactions tone and ACM conference tone with sentence-level rewrites. Project profile: discipline=biomedical engineering; dataset=multi-site clinical cohort; preferred method=transformer baseline; reviewer persona=ethics compliance reviewer; output schema=ablation plan sheet; risk scenario=compute budget reduction; timeline={timeline}; resources={resources}. Return outputs as numbered sections and end with an execution checklist.

**Example:** Example input: discipline=biomedical engineering; dataset=multi-site clinical cohort; timeline=14 weeks; resources=3 researchers + 2 GPUs; target venue=IEEE Transactions; reviewer persona=ethics compliance reviewer. Example outcome: IEEE-ready section draft with risk controls, reviewer-facing rationale, and milestone gates.

**Tips:** Avoid generic claims; anchor every paragraph with result-oriented language. Ensure the ablation plan sheet explicitly addresses compute budget reduction and anticipated concerns from a ethics compliance reviewer.

**Expected Output:** A publication-ready IEEE-ready section draft that includes decisions, rationale, measurable criteria, and reviewer-resilient framing for IEEE Formatting.

**Difficulty:** Expert

**Category:** Execution

## 61. Optimize Abstract for IEEE Reviewers: caption and table enhancement for technical rewrite from preprint to IEEE (IEEE Access) - venue-specific optimization

**Objective:** Pressure-test experimental design before expensive execution. Prioritize rigor and produce publication-grade decisions for Technical Positioning.

**Prompt:** Audit the experimental design for Technical Positioning. Produce control/ablation matrix, confound analysis, data leakage checks, minimum sample strategy, and statistical power guardrails suitable for IEEE Access reviewers. Include a stop/go decision protocol. Project profile: discipline=computational social science; dataset=open government policy data; preferred method=causal inference pipeline; reviewer persona=reproducibility auditor; output schema=rebuttal response grid; risk scenario=time-limited resubmission window; timeline={timeline}; resources={resources}. Return outputs as numbered sections and end with an execution checklist.

**Example:** Example input: discipline=computational social science; dataset=open government policy data; timeline=14 weeks; resources=3 researchers + 2 GPUs; target venue=IEEE Access; reviewer persona=reproducibility auditor. Example outcome: compliance checklist with risk controls, reviewer-facing rationale, and milestone gates.

**Tips:** Design ablations to isolate one causal factor at a time. Ensure the rebuttal response grid explicitly addresses time-limited resubmission window and anticipated concerns from a reproducibility auditor.

**Expected Output:** A publication-ready compliance checklist that includes decisions, rationale, measurable criteria, and reviewer-resilient framing for Technical Positioning.

**Difficulty:** Beginner

**Category:** Compliance

## 62. Engineer a Results Section for IEEE: compliance-first editing for camera-ready compliance check (IEEE IoT Journal) - decision traceability

**Objective:** Convert technical narrative into clean, production-ready LaTeX structure. Prioritize reproducibility and produce publication-grade decisions for Result Narration.

**Prompt:** Create a LaTeX writing workflow for Result Narration: section skeleton, theorem/algorithm formatting guidance, table conventions, citation macros, and cross-reference hygiene. Include common formatting errors and fixes for IEEE IoT Journal submission checks. Project profile: discipline=materials informatics; dataset=federated hospital dataset; preferred method=Bayesian hierarchical model; reviewer persona=applied domain expert; output schema=section rewrite pack; risk scenario=ethics board clarification request; timeline={timeline}; resources={resources}. Return outputs as numbered sections and end with an execution checklist.

**Example:** Example input: discipline=materials informatics; dataset=federated hospital dataset; timeline=14 weeks; resources=3 researchers + 2 GPUs; target venue=IEEE IoT Journal; reviewer persona=applied domain expert. Example outcome: figure-caption package with risk controls, reviewer-facing rationale, and milestone gates.

**Tips:** Draft content in semantic chunks before polishing visual layout. Ensure the section rewrite pack explicitly addresses ethics board clarification request and anticipated concerns from a applied domain expert.

**Expected Output:** A publication-ready figure-caption package that includes decisions, rationale, measurable criteria, and reviewer-resilient framing for Result Narration.

**Difficulty:** Intermediate

**Category:** Reasoning

## 63. Prepare IEEE-Ready Technical Narrative: results storytelling workflow for IEEE conference paper deadline sprint (IEEE TPDS) - citation-strength positioning

**Objective:** Prepare rigorous responses for committee or reviewer questioning. Prioritize clarity and produce publication-grade decisions for Limitations Framing.

**Prompt:** Simulate a high-pressure Q&A; on Limitations Framing. Generate 15 hard questions (methods, validity, novelty, limitations, impact) and produce concise, evidence-backed responses with fallback answers for uncertain data points. Include one slide cue per answer. Project profile: discipline=computational neuroscience; dataset=crowdsourced annotation dataset; preferred method=graph neural workflow; reviewer persona=systems performance reviewer; output schema=action timeline; risk scenario=conflicting baseline outcomes; timeline={timeline}; resources={resources}. Return outputs as numbered sections and end with an execution checklist.

**Example:** Example input: discipline=computational neuroscience; dataset=crowdsourced annotation dataset; timeline=14 weeks; resources=3 researchers + 2 GPUs; target venue=IEEE TPDS; reviewer persona=systems performance reviewer. Example outcome: IEEE-ready section draft with risk controls, reviewer-facing rationale, and milestone gates.

**Tips:** Structure answers as claim -> evidence -> limitation -> next action. Ensure the action timeline explicitly addresses conflicting baseline outcomes and anticipated concerns from a systems performance reviewer.

**Expected Output:** A publication-ready IEEE-ready section draft that includes decisions, rationale, measurable criteria, and reviewer-resilient framing for Limitations Framing.

**Difficulty:** Advanced

**Category:** Analysis

## 64. Write a High-Impact IEEE Introduction: IEEE structure workflow for IEEE Transactions submission cycle (IEEE Transactions) - defense-ready reasoning

**Objective:** Create a contribution map that defends novelty against closest prior work and defines what is publishable. Prioritize statistical power and produce publication-grade decisions for IEEE Formatting.

**Prompt:** Act as a senior research editor. Build a contribution architecture for IEEE Formatting in IEEE Transactions submission cycle targeting IEEE Transactions. Output sections: contribution claim stack, nearest-neighbor prior work comparison, differentiator evidence plan, failure-risk matrix, and a 30/60/90-day execution plan. Project profile: discipline=human-computer interaction; dataset=industrial telemetry stream; preferred method=mixed-methods protocol; reviewer persona=industry impact reviewer; output schema=risk register; risk scenario=missing metadata in source data; timeline={timeline}; resources={resources}. Return outputs as numbered sections and end with an execution checklist.

**Example:** Example input: discipline=human-computer interaction; dataset=industrial telemetry stream; timeline=14 weeks; resources=3 researchers + 2 GPUs; target venue=IEEE Transactions; reviewer persona=industry impact reviewer. Example outcome: compliance checklist with risk controls, reviewer-facing rationale, and milestone gates.

**Tips:** Force each claim to link to one measurable piece of evidence and one comparison baseline. Ensure the risk register explicitly addresses missing metadata in source data and anticipated concerns from a industry impact reviewer.

**Expected Output:** A publication-ready compliance checklist that includes decisions, rationale, measurable criteria, and reviewer-resilient framing for IEEE Formatting.

**Difficulty:** Expert

**Category:** Writing

## 65. Optimize Abstract for IEEE Reviewers: caption and table enhancement for technical rewrite from preprint to IEEE (IEEE Access) - high-confidence statistical reporting

**Objective:** Rewrite methods for reproducibility and procedural transparency. Prioritize transferability and produce publication-grade decisions for Technical Positioning.

**Prompt:** Rewrite the methodology around Technical Positioning for technical rewrite from preprint to IEEE so another lab can reproduce it without author contact. Include variable definitions, preprocessing chronology, model hyperparameters, instrumentation assumptions, and reproducibility checklist required for IEEE Access. Project profile: discipline=robotics; dataset=city-scale mobility records; preferred method=time-series anomaly framework; reviewer persona=editor focused on clarity; output schema=claim-evidence table; risk scenario=incomplete ablation coverage; timeline={timeline}; resources={resources}. Return outputs as numbered sections and end with an execution checklist.

**Example:** Example input: discipline=robotics; dataset=city-scale mobility records; timeline=14 weeks; resources=3 researchers + 2 GPUs; target venue=IEEE Access; reviewer persona=editor focused on clarity. Example outcome: figure-caption package with risk controls, reviewer-facing rationale, and milestone gates.

**Tips:** Name every tool/version and include randomness-control policy. Ensure the claim-evidence table explicitly addresses incomplete ablation coverage and anticipated concerns from a editor focused on clarity.

**Expected Output:** A publication-ready figure-caption package that includes decisions, rationale, measurable criteria, and reviewer-resilient framing for Technical Positioning.

**Difficulty:** Beginner

**Category:** Publication

## 66. Engineer a Results Section for IEEE: compliance-first editing for camera-ready compliance check (IEEE IoT Journal) - evidence-first writing

**Objective:** Craft concise, high-impact abstracts aligned with selective journal standards. Prioritize ethical compliance and produce publication-grade decisions for Result Narration.

**Prompt:** Write a Nature-style abstract for a study on Result Narration in camera-ready compliance check. Constrain to problem, approach, principal quantitative finding, boundary condition, and broader implication. Provide a weaker draft and then a stronger revised draft with rationale. Project profile: discipline=digital health; dataset=public genomics panel; preferred method=hybrid rule-neural model; reviewer persona=skeptical statistician; output schema=decision matrix; risk scenario=dataset shift at deployment; timeline={timeline}; resources={resources}. Return outputs as numbered sections and end with an execution checklist.

**Example:** Example input: discipline=digital health; dataset=public genomics panel; timeline=14 weeks; resources=3 researchers + 2 GPUs; target venue=IEEE IoT Journal; reviewer persona=skeptical statistician. Example outcome: IEEE-ready section draft with risk controls, reviewer-facing rationale, and milestone gates.

**Tips:** One central claim per sentence keeps abstract logic clean and persuasive. Ensure the decision matrix explicitly addresses dataset shift at deployment and anticipated concerns from a skeptical statistician.

**Expected Output:** A publication-ready IEEE-ready section draft that includes decisions, rationale, measurable criteria, and reviewer-resilient framing for Result Narration.

**Difficulty:** Intermediate

**Category:** Methodology

## 67. Prepare IEEE-Ready Technical Narrative: results storytelling workflow for IEEE conference paper deadline sprint (IEEE TPDS) - hypothesis stress testing

**Objective:** Transform visuals into evidence-rich storytelling assets. Prioritize computational efficiency and produce publication-grade decisions for Limitations Framing.

**Prompt:** Generate a figure strategy for Limitations Framing with publication-grade caption drafts. For each figure, define purpose, metric, axis design, uncertainty communication, and interpretation sentence expected by IEEE TPDS. Add one caption rewrite for non-expert readers. Project profile: discipline=machine learning; dataset=benchmark tabular risk dataset; preferred method=multi-objective optimizer; reviewer persona=benchmarking specialist; output schema=compliance checklist; risk scenario=unexpected reviewer disagreement; timeline={timeline}; resources={resources}. Return outputs as numbered sections and end with an execution checklist.

**Example:** Example input: discipline=machine learning; dataset=benchmark tabular risk dataset; timeline=14 weeks; resources=3 researchers + 2 GPUs; target venue=IEEE TPDS; reviewer persona=benchmarking specialist. Example outcome: compliance checklist with risk controls, reviewer-facing rationale, and milestone gates.

**Tips:** Good captions stand alone and state what changed, by how much, and why it matters. Ensure the compliance checklist explicitly addresses unexpected reviewer disagreement and anticipated concerns from a benchmarking specialist.

**Expected Output:** A publication-ready compliance checklist that includes decisions, rationale, measurable criteria, and reviewer-resilient framing for Limitations Framing.

**Difficulty:** Advanced

**Category:** Execution

## 68. Write a High-Impact IEEE Introduction: IEEE structure workflow for IEEE Transactions submission cycle (IEEE Transactions) - results-to-insight translation

**Objective:** Embed ethics and compliance checks into the technical workflow. Prioritize clinical relevance and produce publication-grade decisions for IEEE Formatting.

**Prompt:** Build an ethics checklist and mitigation plan for IEEE Formatting in IEEE Transactions submission cycle. Include fairness risks, privacy boundaries, human-subject concerns, reporting transparency, and audit evidence

expected for IEEE Transactions review. Project profile: discipline=climate informatics; dataset=multi-modal image-text corpus; preferred method=semi-supervised training setup; reviewer persona=theory-oriented reviewer; output schema=citation repair map; risk scenario=high class imbalance; timeline={timeline}; resources={resources}. Return outputs as numbered sections and end with an execution checklist.

**Example:** Example input: discipline=climate informatics; dataset=multi-modal image-text corpus; timeline=14 weeks; resources=3 researchers + 2 GPUs; target venue=IEEE Transactions; reviewer persona=theory-oriented reviewer. Example outcome: figure-caption package with risk controls, reviewer-facing rationale, and milestone gates.

**Tips:** Translate ethical risks into actionable controls with owner and verification evidence. Ensure the citation repair map explicitly addresses high class imbalance and anticipated concerns from a theory-oriented reviewer.

**Expected Output:** A publication-ready figure-caption package that includes decisions, rationale, measurable criteria, and reviewer-resilient framing for IEEE Formatting.

**Difficulty:** Expert

**Category:** Compliance

## 69. Optimize Abstract for IEEE Reviewers: caption and table enhancement for technical rewrite from preprint to IEEE (IEEE Access) - major-revision readiness

**Objective:** Choose venue strategy, narrative framing, and revision sequencing. Prioritize publication readiness and produce publication-grade decisions for Technical Positioning.

**Prompt:** Design a publication strategy for Technical Positioning: venue ladder (A-plan/B-plan), novelty framing options, deadline-aligned writing sprints, and reviewer-risk scenarios. Include a branch for conference-first then journal-extension path for IEEE Access. Project profile: discipline=cybersecurity; dataset=longitudinal sensor dataset; preferred method=counterfactual evaluation approach; reviewer persona=methodology purist; output schema=figure-caption protocol; risk scenario=inter-annotator disagreement; timeline={timeline}; resources={resources}. Return outputs as numbered sections and end with an execution checklist.

**Example:** Example input: discipline=cybersecurity; dataset=longitudinal sensor dataset; timeline=14 weeks; resources=3 researchers + 2 GPUs; target venue=IEEE Access; reviewer persona=methodology purist. Example outcome: IEEE-ready section draft with risk controls, reviewer-facing rationale, and milestone gates.

**Tips:** Plan fallback venue narratives early to reduce resubmission cycle time. Ensure the figure-caption protocol explicitly addresses inter-annotator disagreement and anticipated concerns from a methodology purist.

**Expected Output:** A publication-ready IEEE-ready section draft that includes decisions, rationale, measurable criteria, and reviewer-resilient framing for Technical Positioning.

**Difficulty:** Beginner

**Category:** Reasoning

## 70. Engineer a Results Section for IEEE: compliance-first editing for camera-ready compliance check (IEEE IoT Journal) - replication-grade documentation

**Objective:** Turn skeptical reviewer criticism into a persuasive, evidence-linked response workflow. Prioritize novelty and produce publication-grade decisions for Result Narration.

**Prompt:** Assume Reviewer #2 challenges Result Narration for IEEE IoT Journal. Draft a response package with: acknowledgement sentence, technical clarification, direct manuscript change, optional added experiment, and fallback wording if resources are limited. Provide line-level mapping format for revision tracking. Project profile: discipline=biomedical engineering; dataset=multi-site clinical cohort; preferred method=transformer baseline; reviewer persona=interdisciplinary committee member; output schema=statistical decision tree; risk scenario=small sample size constraints; timeline={timeline}; resources={resources}. Return outputs as numbered sections and end with an execution checklist.

**Example:** Example input: discipline=biomedical engineering; dataset=multi-site clinical cohort; timeline=14 weeks; resources=3 researchers + 2 GPUs; target venue=IEEE IoT Journal; reviewer persona=interdisciplinary committee member. Example outcome: compliance checklist with risk controls, reviewer-facing rationale, and milestone gates.

**Tips:** Use respectful tone and separate explanation, action, and manuscript delta into distinct bullets. Ensure the statistical decision tree explicitly addresses small sample size constraints and anticipated concerns from a interdisciplinary committee member.

**Expected Output:** A publication-ready compliance checklist that includes decisions, rationale, measurable criteria, and reviewer-resilient framing for Result Narration.

**Difficulty:** Intermediate

**Category:** Rebuttal

## 71. Prepare IEEE-Ready Technical Narrative: results storytelling workflow for IEEE conference paper deadline sprint (IEEE TPDS) - reviewer-resilient argumentation

**Objective:** Plan a high-confidence major revision package for journal resubmission. Prioritize rigor and produce publication-grade decisions for Limitations Framing.

**Prompt:** Create a major revision plan for an Elsevier-style decision letter focused on Limitations Framing. Include comment clustering, evidence plan, timeline by dependency, added-analysis options, and response-letter structure that anticipates editor priorities for IEEE TPDS. Project profile: discipline=computational social science; dataset=open government policy data; preferred method=causal inference pipeline; reviewer persona=ethics compliance reviewer; output schema=ablation plan sheet; risk scenario=compute budget reduction; timeline={timeline}; resources={resources}. Return outputs as numbered sections and end with an execution checklist.

**Example:** Example input: discipline=computational social science; dataset=open government policy data; timeline=14 weeks; resources=3 researchers + 2 GPUs; target venue=IEEE TPDS; reviewer persona=ethics compliance reviewer. Example outcome: figure-caption package with risk controls, reviewer-facing rationale, and milestone gates.

**Tips:** Group reviewer comments by technical dependency to prevent contradictory edits. Ensure the ablation plan sheet explicitly addresses compute budget reduction and anticipated concerns from a ethics compliance reviewer.

**Expected Output:** A publication-ready figure-caption package that includes decisions, rationale, measurable criteria, and reviewer-resilient framing for Limitations Framing.

**Difficulty:** Advanced

**Category:** Validation

## 72. Write a High-Impact IEEE Introduction: IEEE structure workflow for IEEE Transactions submission cycle (IEEE Transactions) - ethics-by-design reporting

**Objective:** Select robust statistical strategy and interpretation logic. Prioritize reproducibility and produce publication-grade decisions for IEEE Formatting.

**Prompt:** Design a statistical analysis workflow for IEEE Formatting with assumptions, test-selection logic, effect-size reporting, multiplicity correction, and uncertainty interpretation. Output a decision tree that maps data conditions to recommended tests for IEEE Transactions. Project profile: discipline=materials informatics; dataset=federated hospital dataset; preferred method=Bayesian hierarchical model; reviewer persona=reproducibility auditor; output schema=rebuttal response grid; risk scenario=time-limited resubmission window; timeline={timeline}; resources={resources}. Return outputs as numbered sections and end with an execution checklist.

**Example:** Example input: discipline=materials informatics; dataset=federated hospital dataset; timeline=14 weeks; resources=3 researchers + 2 GPUs; target venue=IEEE Transactions; reviewer persona=reproducibility auditor. Example outcome: IEEE-ready section draft with risk controls, reviewer-facing rationale, and milestone gates.

**Tips:** Pair p-values with effect sizes and confidence intervals in every result claim. Ensure the rebuttal response grid explicitly addresses time-limited resubmission window and anticipated concerns from a reproducibility auditor.

**Expected Output:** A publication-ready IEEE-ready section draft that includes decisions, rationale, measurable criteria, and reviewer-resilient framing for IEEE Formatting.

**Difficulty:** Expert

**Category:** Publication

### 73. Optimize Abstract for IEEE Reviewers: caption and table enhancement for technical rewrite from preprint to IEEE (IEEE Access) - limitations-first transparency

**Objective:** Detect weak citation support and strengthen scholarly positioning. Prioritize clarity and produce publication-grade decisions for Technical Positioning.

**Prompt:** Analyze a draft on Technical Positioning and identify citation gaps by claim type: foundational, comparative, methodological, and limitation-related. Return a prioritized fill plan with query phrases, likely source types, and insertion points tailored to IEEE Access. Project profile: discipline=computational neuroscience; dataset=crowdsourced annotation dataset; preferred method=graph neural workflow; reviewer persona=applied domain expert; output schema=section rewrite pack; risk scenario=ethics board clarification request; timeline={timeline}; resources={resources}. Return outputs as numbered sections and end with an execution checklist.

**Example:** Example input: discipline=computational neuroscience; dataset=crowdsourced annotation dataset; timeline=14 weeks; resources=3 researchers + 2 GPUs; target venue=IEEE Access; reviewer persona=applied domain expert. Example outcome: compliance checklist with risk controls, reviewer-facing rationale, and milestone gates.

**Tips:** Flag unsupported superlatives first; they trigger avoidable reviewer criticism. Ensure the section rewrite pack explicitly addresses ethics board clarification request and anticipated concerns from an applied domain expert.

**Expected Output:** A publication-ready compliance checklist that includes decisions, rationale, measurable criteria, and reviewer-resilient framing for Technical Positioning.

**Difficulty:** Beginner

**Category:** Methodology

### 74. Engineer a Results Section for IEEE: compliance-first editing for camera-ready compliance check (IEEE IoT Journal) - cross-domain readability

**Objective:** Convert raw metrics into defensible scientific interpretation. Prioritize statistical power and produce publication-grade decisions for Result Narration.

**Prompt:** Interpret results for Result Narration using a claim-evidence map: primary findings, uncertainty envelope, competing explanations, boundary conditions, and implications for future work in IEEE IoT Journal. Add one paragraph that preempts overclaiming. Project profile: discipline=human-computer interaction; dataset=industrial telemetry stream; preferred method=mixed-methods protocol; reviewer persona=systems performance reviewer; output schema=action timeline; risk scenario=conflicting baseline outcomes; timeline={timeline}; resources={resources}. Return outputs as numbered sections and end with an execution checklist.

**Example:** Example input: discipline=human-computer interaction; dataset=industrial telemetry stream; timeline=14 weeks; resources=3 researchers + 2 GPUs; target venue=IEEE IoT Journal; reviewer persona=systems performance reviewer. Example outcome: figure-caption package with risk controls, reviewer-facing rationale, and milestone gates.

**Tips:** State what the results do not prove as clearly as what they do prove. Ensure the action timeline explicitly addresses conflicting baseline outcomes and anticipated concerns from a systems performance reviewer.

**Expected Output:** A publication-ready figure-caption package that includes decisions, rationale, measurable criteria, and reviewer-resilient framing for Result Narration.

**Difficulty:** Intermediate

**Category:** Execution

## 75. Prepare IEEE-Ready Technical Narrative: results storytelling workflow for IEEE conference paper deadline sprint (IEEE TPDS) - impact-focused communication

**Objective:** Detect non-obvious research gaps and convert them into testable opportunities. Prioritize transferability and produce publication-grade decisions for Limitations Framing.

**Prompt:** You are a literature forensics specialist. From the context below, identify unresolved contradictions in Limitations Framing and rank them by impact and tractability. Then design three testable gap statements, each with required datasets, threat-to-validity notes, and likely reviewer objections for IEEE TPDS. Project profile: discipline=robotics; dataset=city-scale mobility records; preferred method=time-series anomaly framework; reviewer persona=industry impact reviewer; output schema=risk register; risk scenario=missing metadata in source data; timeline={timeline}; resources={resources}. Return outputs as numbered sections and end with an execution checklist.

**Example:** Example input: discipline=robotics; dataset=city-scale mobility records; timeline=14 weeks; resources=3 researchers + 2 GPUs; target venue=IEEE TPDS; reviewer persona=industry impact reviewer. Example outcome: IEEE-ready section draft with risk controls, reviewer-facing rationale, and milestone gates.

**Tips:** Distinguish 'no evidence exists' from 'evidence exists but conflicts' to avoid weak gap claims. Ensure the risk register explicitly addresses missing metadata in source data and anticipated concerns from a industry impact reviewer.

**Expected Output:** A publication-ready IEEE-ready section draft that includes decisions, rationale, measurable criteria, and reviewer-resilient framing for Limitations Framing.

**Difficulty:** Advanced

**Category:** Compliance

## 76. Write a High-Impact IEEE Introduction: IEEE structure workflow for IEEE Transactions submission cycle (IEEE Transactions) - publishable novelty framing

**Objective:** Produce section drafts compliant with high-impact conference and journal conventions. Prioritize ethical compliance and produce publication-grade decisions for IEEE Formatting.

**Prompt:** Generate a publication-ready section for IEEE Formatting tuned for IEEE Transactions. Enforce concise technical style, explicit contributions, and strong figure/table callouts. Provide two style variants: IEEE Transactions tone and ACM conference tone with sentence-level rewrites. Project profile: discipline=digital health; dataset=public genomics panel; preferred method=hybrid rule-neural model; reviewer persona=editor focused on clarity; output schema=claim-evidence table; risk scenario=incomplete ablation coverage; timeline={timeline}; resources={resources}. Return outputs as numbered sections and end with an execution checklist.

**Example:** Example input: discipline=digital health; dataset=public genomics panel; timeline=14 weeks; resources=3 researchers + 2 GPUs; target venue=IEEE Transactions; reviewer persona=editor focused on clarity. Example outcome: compliance checklist with risk controls, reviewer-facing rationale, and milestone gates.

**Tips:** Avoid generic claims; anchor every paragraph with result-oriented language. Ensure the claim-evidence table explicitly addresses incomplete ablation coverage and anticipated concerns from a editor focused on clarity.

**Expected Output:** A publication-ready compliance checklist that includes decisions, rationale, measurable criteria, and reviewer-resilient framing for IEEE Formatting.

**Difficulty:** Expert

**Category:** Reasoning

## 77. Optimize Abstract for IEEE Reviewers: caption and table enhancement for technical rewrite from preprint to IEEE (IEEE Access) - practical deployment framing - Variant 077

**Objective:** Pressure-test experimental design before expensive execution. Prioritize computational efficiency and produce publication-grade decisions for Technical Positioning.

**Prompt:** Audit the experimental design for Technical Positioning. Produce control/ablation matrix, confound analysis, data leakage checks, minimum sample strategy, and statistical power guardrails suitable for IEEE Access reviewers. Include a stop/go decision protocol. Project profile: discipline=machine learning; dataset=benchmark tabular risk dataset; preferred method=multi-objective optimizer; reviewer persona=skeptical statistician; output schema=decision matrix; risk scenario=dataset shift at deployment; timeline={timeline}; resources={resources}. Return outputs as numbered sections and end with an execution checklist.

**Example:** Example input: discipline=machine learning; dataset=benchmark tabular risk dataset; timeline=14 weeks; resources=3 researchers + 2 GPUs; target venue=IEEE Access; reviewer persona=skeptical statistician. Example outcome: figure-caption package with risk controls, reviewer-facing rationale, and milestone gates.

**Tips:** Design ablations to isolate one causal factor at a time. Ensure the decision matrix explicitly addresses dataset shift at deployment and anticipated concerns from a skeptical statistician.

**Expected Output:** A publication-ready figure-caption package that includes decisions, rationale, measurable criteria, and reviewer-resilient framing for Technical Positioning.

**Difficulty:** Beginner

**Category:** Rebuttal

## 78. Engineer a Results Section for IEEE: compliance-first editing for camera-ready compliance check (IEEE IoT Journal) - method comparison clarity - Variant 078

**Objective:** Convert technical narrative into clean, production-ready LaTeX structure. Prioritize clinical relevance and produce publication-grade decisions for Result Narration.

**Prompt:** Create a LaTeX writing workflow for Result Narration: section skeleton, theorem/algorithm formatting guidance, table conventions, citation macros, and cross-reference hygiene. Include common formatting errors and fixes for IEEE IoT Journal submission checks. Project profile: discipline=climate informatics; dataset=multi-modal image-text corpus; preferred method=semi-supervised training setup; reviewer persona=benchmarking specialist; output schema=compliance checklist; risk scenario=unexpected reviewer disagreement; timeline={timeline}; resources={resources}. Return outputs as numbered sections and end with an execution checklist.

**Example:** Example input: discipline=climate informatics; dataset=multi-modal image-text corpus; timeline=14 weeks; resources=3 researchers + 2 GPUs; target venue=IEEE IoT Journal; reviewer persona=benchmarking specialist. Example outcome: IEEE-ready section draft with risk controls, reviewer-facing rationale, and milestone gates.

**Tips:** Draft content in semantic chunks before polishing visual layout. Ensure the compliance checklist explicitly addresses unexpected reviewer disagreement and anticipated concerns from a benchmarking specialist.

**Expected Output:** A publication-ready IEEE-ready section draft that includes decisions, rationale, measurable criteria, and reviewer-resilient framing for Result Narration.

**Difficulty:** Intermediate

**Category:** Validation

## 79. Prepare IEEE-Ready Technical Narrative: results storytelling workflow for IEEE conference paper deadline sprint (IEEE TPDS) - editorial risk reduction - Variant 079

**Objective:** Prepare rigorous responses for committee or reviewer questioning. Prioritize publication readiness and produce publication-grade decisions for Limitations Framing.

**Prompt:** Simulate a high-pressure Q&A; on Limitations Framing. Generate 15 hard questions (methods, validity, novelty, limitations, impact) and produce concise, evidence-backed responses with fallback answers for uncertain data points. Include one slide cue per answer. Project profile: discipline=cybersecurity; dataset=longitudinal sensor dataset; preferred method=counterfactual evaluation approach; reviewer persona=theory-oriented reviewer; output schema=citation repair map; risk scenario=high class imbalance; timeline={timeline}; resources={resources}. Return outputs as numbered sections and end with an execution checklist.

**Example:** Example input: discipline=cybersecurity; dataset=longitudinal sensor dataset; timeline=14 weeks; resources=3 researchers + 2 GPUs; target venue=IEEE TPDS; reviewer persona=theory-oriented reviewer. Example outcome: compliance checklist with risk controls, reviewer-facing rationale, and milestone gates.

**Tips:** Structure answers as claim -> evidence -> limitation -> next action. Ensure the citation repair map explicitly addresses high class imbalance and anticipated concerns from a theory-oriented reviewer.

**Expected Output:** A publication-ready compliance checklist that includes decisions, rationale, measurable criteria, and reviewer-resilient framing for Limitations Framing.

**Difficulty:** Advanced

**Category:** Optimization

## 80. Write a High-Impact IEEE Introduction: IEEE structure workflow for IEEE Transactions submission cycle (IEEE Transactions) - venue-specific optimization - Variant 080

**Objective:** Create a contribution map that defends novelty against closest prior work and defines what is publishable. Prioritize novelty and produce publication-grade decisions for IEEE Formatting.

**Prompt:** Act as a senior research editor. Build a contribution architecture for IEEE Formatting in IEEE Transactions submission cycle targeting IEEE Transactions. Output sections: contribution claim stack, nearest-neighbor prior work comparison, differentiator evidence plan, failure-risk matrix, and a 30/60/90-day execution plan. Project profile: discipline=biomedical engineering; dataset=multi-site clinical cohort; preferred method=transformer baseline; reviewer persona=methodology purist; output schema=figure-caption protocol; risk scenario=inter-annotator disagreement; timeline={timeline}; resources={resources}. Return outputs as numbered sections and end with an execution checklist.

**Example:** Example input: discipline=biomedical engineering; dataset=multi-site clinical cohort; timeline=14 weeks; resources=3 researchers + 2 GPUs; target venue=IEEE Transactions; reviewer persona=methodology purist. Example outcome: figure-caption package with risk controls, reviewer-facing rationale, and milestone gates.

**Tips:** Force each claim to link to one measurable piece of evidence and one comparison baseline. Ensure the figure-caption protocol explicitly addresses inter-annotator disagreement and anticipated concerns from a methodology purist.

**Expected Output:** A publication-ready figure-caption package that includes decisions, rationale, measurable criteria, and reviewer-resilient framing for IEEE Formatting.

**Difficulty:** Expert

**Category:** Planning

## 81. Optimize Abstract for IEEE Reviewers: caption and table enhancement for technical rewrite from preprint to IEEE (IEEE Access) - decision traceability - Variant 081

**Objective:** Rewrite methods for reproducibility and procedural transparency. Prioritize rigor and produce publication-grade decisions for Technical Positioning.

**Prompt:** Rewrite the methodology around Technical Positioning for technical rewrite from preprint to IEEE so another lab can reproduce it without author contact. Include variable definitions, preprocessing chronology, model hyperparameters, instrumentation assumptions, and reproducibility checklist required for IEEE Access. Project profile: discipline=computational social science; dataset=open government policy data; preferred method=causal inference pipeline; reviewer persona=interdisciplinary committee member; output schema=statistical decision tree; risk scenario=small sample size constraints; timeline={timeline}; resources={resources}. Return outputs as numbered sections and end with an execution checklist.

**Example:** Example input: discipline=computational social science; dataset=open government policy data; timeline=14 weeks; resources=3 researchers + 2 GPUs; target venue=IEEE Access; reviewer persona=interdisciplinary committee member. Example outcome: IEEE-ready section draft with risk controls, reviewer-facing rationale, and milestone gates.

**Tips:** Name every tool/version and include randomness-control policy. Ensure the statistical decision tree explicitly addresses small sample size constraints and anticipated concerns from a interdisciplinary committee member.

**Expected Output:** A publication-ready IEEE-ready section draft that includes decisions, rationale, measurable criteria, and reviewer-resilient framing for Technical Positioning.

**Difficulty:** Beginner

**Category:** Execution

## 82. Engineer a Results Section for IEEE: compliance-first editing for camera-ready compliance check (IEEE IoT Journal) - citation-strength positioning - Variant 082

**Objective:** Craft concise, high-impact abstracts aligned with selective journal standards. Prioritize reproducibility and produce publication-grade decisions for Result Narration.

**Prompt:** Write a Nature-style abstract for a study on Result Narration in camera-ready compliance check. Constrain to problem, approach, principal quantitative finding, boundary condition, and broader implication. Provide a weaker draft and then a stronger revised draft with rationale. Project profile: discipline=materials informatics; dataset=federated hospital dataset; preferred method=Bayesian hierarchical model; reviewer persona=ethics compliance reviewer; output schema=ablation plan sheet; risk scenario=compute budget reduction; timeline={timeline}; resources={resources}. Return outputs as numbered sections and end with an execution checklist.

**Example:** Example input: discipline=materials informatics; dataset=federated hospital dataset; timeline=14 weeks; resources=3 researchers + 2 GPUs; target venue=IEEE IoT Journal; reviewer persona=ethics compliance reviewer. Example outcome: compliance checklist with risk controls, reviewer-facing rationale, and milestone gates.

**Tips:** One central claim per sentence keeps abstract logic clean and persuasive. Ensure the ablation plan sheet explicitly addresses compute budget reduction and anticipated concerns from a ethics compliance reviewer.

**Expected Output:** A publication-ready compliance checklist that includes decisions, rationale, measurable criteria, and reviewer-resilient framing for Result Narration.

**Difficulty:** Intermediate

**Category:** Compliance

### 83. Prepare IEEE-Ready Technical Narrative: results storytelling workflow for IEEE conference paper deadline sprint (IEEE TPDS) - defense-ready reasoning - Variant 083

**Objective:** Transform visuals into evidence-rich storytelling assets. Prioritize clarity and produce publication-grade decisions for Limitations Framing.

**Prompt:** Generate a figure strategy for Limitations Framing with publication-grade caption drafts. For each figure, define purpose, metric, axis design, uncertainty communication, and interpretation sentence expected by IEEE TPDS. Add one caption rewrite for non-expert readers. Project profile: discipline=computational neuroscience; dataset=crowdsourced annotation dataset; preferred method=graph neural workflow; reviewer persona=reproducibility auditor; output schema=rebuttal response grid; risk scenario=time-limited resubmission window; timeline={timeline}; resources={resources}. Return outputs as numbered sections and end with an execution checklist.

**Example:** Example input: discipline=computational neuroscience; dataset=crowdsourced annotation dataset; timeline=14 weeks; resources=3 researchers + 2 GPUs; target venue=IEEE TPDS; reviewer persona=reproducibility auditor. Example outcome: figure-caption package with risk controls, reviewer-facing rationale, and milestone gates.

**Tips:** Good captions stand alone and state what changed, by how much, and why it matters. Ensure the rebuttal response grid explicitly addresses time-limited resubmission window and anticipated concerns from a reproducibility auditor.

**Expected Output:** A publication-ready figure-caption package that includes decisions, rationale, measurable criteria, and reviewer-resilient framing for Limitations Framing.

**Difficulty:** Advanced

**Category:** Reasoning

### 84. Write a High-Impact IEEE Introduction: IEEE structure workflow for IEEE Transactions submission cycle (IEEE Transactions) - high-confidence statistical reporting - Variant 084

**Objective:** Embed ethics and compliance checks into the technical workflow. Prioritize statistical power and produce publication-grade decisions for IEEE Formatting.

**Prompt:** Build an ethics checklist and mitigation plan for IEEE Formatting in IEEE Transactions submission cycle. Include fairness risks, privacy boundaries, human-subject concerns, reporting transparency, and audit evidence expected for IEEE Transactions review. Project profile: discipline=human-computer interaction; dataset=industrial telemetry stream; preferred method=mixed-methods protocol; reviewer persona=applied domain expert; output schema=section rewrite pack; risk scenario=ethics board clarification request; timeline={timeline}; resources={resources}. Return outputs as numbered sections and end with an execution checklist.

**Example:** Example input: discipline=human-computer interaction; dataset=industrial telemetry stream; timeline=14 weeks; resources=3 researchers + 2 GPUs; target venue=IEEE Transactions; reviewer persona=applied domain expert. Example outcome: IEEE-ready section draft with risk controls, reviewer-facing rationale, and milestone gates.

**Tips:** Translate ethical risks into actionable controls with owner and verification evidence. Ensure the section rewrite pack explicitly addresses ethics board clarification request and anticipated concerns from an applied domain expert.

**Expected Output:** A publication-ready IEEE-ready section draft that includes decisions, rationale, measurable criteria, and reviewer-resilient framing for IEEE Formatting.

**Difficulty:** Expert

**Category:** Rebuttal

## 85. Optimize Abstract for IEEE Reviewers: caption and table enhancement for technical rewrite from preprint to IEEE (IEEE Access) - evidence-first writing - Variant 085

**Objective:** Choose venue strategy, narrative framing, and revision sequencing. Prioritize transferability and produce publication-grade decisions for Technical Positioning.

**Prompt:** Design a publication strategy for Technical Positioning: venue ladder (A-plan/B-plan), novelty framing options, deadline-aligned writing sprints, and reviewer-risk scenarios. Include a branch for conference-first then journal-extension path for IEEE Access. Project profile: discipline=robotics; dataset=city-scale mobility records; preferred method=time-series anomaly framework; reviewer persona=systems performance reviewer; output schema=action timeline; risk scenario=conflicting baseline outcomes; timeline={timeline}; resources={resources}. Return outputs as numbered sections and end with an execution checklist.

**Example:** Example input: discipline=robotics; dataset=city-scale mobility records; timeline=14 weeks; resources=3 researchers + 2 GPUs; target venue=IEEE Access; reviewer persona=systems performance reviewer. Example outcome: compliance checklist with risk controls, reviewer-facing rationale, and milestone gates.

**Tips:** Plan fallback venue narratives early to reduce resubmission cycle time. Ensure the action timeline explicitly addresses conflicting baseline outcomes and anticipated concerns from a systems performance reviewer.

**Expected Output:** A publication-ready compliance checklist that includes decisions, rationale, measurable criteria, and reviewer-resilient framing for Technical Positioning.

**Difficulty:** Beginner

**Category:** Validation

## 86. Engineer a Results Section for IEEE: compliance-first editing for camera-ready compliance check (IEEE IoT Journal) - hypothesis stress testing - Variant 086

**Objective:** Turn skeptical reviewer criticism into a persuasive, evidence-linked response workflow. Prioritize ethical compliance and produce publication-grade decisions for Result Narration.

**Prompt:** Assume Reviewer #2 challenges Result Narration for IEEE IoT Journal. Draft a response package with: acknowledgement sentence, technical clarification, direct manuscript change, optional added experiment, and fallback wording if resources are limited. Provide line-level mapping format for revision tracking. Project profile: discipline=digital health; dataset=public genomics panel; preferred method=hybrid rule-neural model; reviewer persona=industry impact reviewer; output schema=risk register; risk scenario=missing metadata in source data; timeline={timeline}; resources={resources}. Return outputs as numbered sections and end with an execution checklist.

**Example:** Example input: discipline=digital health; dataset=public genomics panel; timeline=14 weeks; resources=3 researchers + 2 GPUs; target venue=IEEE IoT Journal; reviewer persona=industry impact reviewer. Example outcome: figure-caption package with risk controls, reviewer-facing rationale, and milestone gates.

**Tips:** Use respectful tone and separate explanation, action, and manuscript delta into distinct bullets. Ensure the risk register explicitly addresses missing metadata in source data and anticipated concerns from a industry impact reviewer.

**Expected Output:** A publication-ready figure-caption package that includes decisions, rationale, measurable criteria, and reviewer-resilient framing for Result Narration.

**Difficulty:** Intermediate

**Category:** Optimization

## 87. Prepare IEEE-Ready Technical Narrative: results storytelling workflow for IEEE conference paper deadline sprint (IEEE TPDS) - results-to-insight translation - Variant 087

**Objective:** Plan a high-confidence major revision package for journal resubmission. Prioritize computational efficiency and produce publication-grade decisions for Limitations Framing.

**Prompt:** Create a major revision plan for an Elsevier-style decision letter focused on Limitations Framing. Include comment clustering, evidence plan, timeline by dependency, added-analysis options, and response-letter structure that anticipates editor priorities for IEEE TPDS. Project profile: discipline=machine learning; dataset=benchmark tabular risk dataset; preferred method=multi-objective optimizer; reviewer persona=editor focused on clarity; output schema=claim-evidence table; risk scenario=incomplete ablation coverage; timeline={timeline}; resources={resources}. Return outputs as numbered sections and end with an execution checklist.

**Example:** Example input: discipline=machine learning; dataset=benchmark tabular risk dataset; timeline=14 weeks; resources=3 researchers + 2 GPUs; target venue=IEEE TPDS; reviewer persona=editor focused on clarity. Example outcome: IEEE-ready section draft with risk controls, reviewer-facing rationale, and milestone gates.

**Tips:** Group reviewer comments by technical dependency to prevent contradictory edits. Ensure the claim-evidence table explicitly addresses incomplete ablation coverage and anticipated concerns from a editor focused on clarity.

**Expected Output:** A publication-ready IEEE-ready section draft that includes decisions, rationale, measurable criteria, and reviewer-resilient framing for Limitations Framing.

**Difficulty:** Advanced

**Category:** Planning

## 88. Write a High-Impact IEEE Introduction: IEEE structure workflow for IEEE Transactions submission cycle (IEEE Transactions) - major-revision readiness - Variant 088

**Objective:** Select robust statistical strategy and interpretation logic. Prioritize clinical relevance and produce publication-grade decisions for IEEE Formatting.

**Prompt:** Design a statistical analysis workflow for IEEE Formatting with assumptions, test-selection logic, effect-size reporting, multiplicity correction, and uncertainty interpretation. Output a decision tree that maps data conditions to recommended tests for IEEE Transactions. Project profile: discipline=climate informatics; dataset=multi-modal image-text corpus; preferred method=semi-supervised training setup; reviewer persona=skeptical statistician; output schema=decision matrix; risk scenario=dataset shift at deployment; timeline={timeline}; resources={resources}. Return outputs as numbered sections and end with an execution checklist.

**Example:** Example input: discipline=climate informatics; dataset=multi-modal image-text corpus; timeline=14 weeks; resources=3 researchers + 2 GPUs; target venue=IEEE Transactions; reviewer persona=skeptical statistician. Example outcome: compliance checklist with risk controls, reviewer-facing rationale, and milestone gates.

**Tips:** Pair p-values with effect sizes and confidence intervals in every result claim. Ensure the decision matrix explicitly addresses dataset shift at deployment and anticipated concerns from a skeptical statistician.

**Expected Output:** A publication-ready compliance checklist that includes decisions, rationale, measurable criteria, and reviewer-resilient framing for IEEE Formatting.

**Difficulty:** Expert

**Category:** Strategy

## 89. Optimize Abstract for IEEE Reviewers: caption and table enhancement for technical rewrite from preprint to IEEE (IEEE Access) - replication-grade documentation - Variant 089

**Objective:** Detect weak citation support and strengthen scholarly positioning. Prioritize publication readiness and produce publication-grade decisions for Technical Positioning.

**Prompt:** Analyze a draft on Technical Positioning and identify citation gaps by claim type: foundational, comparative, methodological, and limitation-related. Return a prioritized fill plan with query phrases, likely source types, and insertion points tailored to IEEE Access. Project profile: discipline=cybersecurity; dataset=longitudinal sensor dataset; preferred method=counterfactual evaluation approach; reviewer persona=benchmarking specialist; output schema=compliance checklist; risk scenario=unexpected reviewer disagreement; timeline={timeline}; resources={resources}. Return outputs as numbered sections and end with an execution checklist.

**Example:** Example input: discipline=cybersecurity; dataset=longitudinal sensor dataset; timeline=14 weeks; resources=3 researchers + 2 GPUs; target venue=IEEE Access; reviewer persona=benchmarking specialist. Example outcome: figure-caption package with risk controls, reviewer-facing rationale, and milestone gates.

**Tips:** Flag unsupported superlatives first; they trigger avoidable reviewer criticism. Ensure the compliance checklist explicitly addresses unexpected reviewer disagreement and anticipated concerns from a benchmarking specialist.

**Expected Output:** A publication-ready figure-caption package that includes decisions, rationale, measurable criteria, and reviewer-resilient framing for Technical Positioning.

**Difficulty:** Beginner

**Category:** Analysis

## 90. Engineer a Results Section for IEEE: compliance-first editing for camera-ready compliance check (IEEE IoT Journal) - reviewer-resilient argumentation - Variant 090

**Objective:** Convert raw metrics into defensible scientific interpretation. Prioritize novelty and produce publication-grade decisions for Result Narration.

**Prompt:** Interpret results for Result Narration using a claim-evidence map: primary findings, uncertainty envelope, competing explanations, boundary conditions, and implications for future work in IEEE IoT Journal. Add one paragraph that preempts overclaiming. Project profile: discipline=biomedical engineering; dataset=multi-site clinical cohort; preferred method=transformer baseline; reviewer persona=theory-oriented reviewer; output schema=citation repair map; risk scenario=high class imbalance; timeline={timeline}; resources={resources}. Return outputs as numbered sections and end with an execution checklist.

**Example:** Example input: discipline=biomedical engineering; dataset=multi-site clinical cohort; timeline=14 weeks; resources=3 researchers + 2 GPUs; target venue=IEEE IoT Journal; reviewer persona=theory-oriented reviewer. Example outcome: IEEE-ready section draft with risk controls, reviewer-facing rationale, and milestone gates.

**Tips:** State what the results do not prove as clearly as what they do prove. Ensure the citation repair map explicitly addresses high class imbalance and anticipated concerns from a theory-oriented reviewer.

**Expected Output:** A publication-ready IEEE-ready section draft that includes decisions, rationale, measurable criteria, and reviewer-resilient framing for Result Narration.

**Difficulty:** Intermediate

**Category:** Reasoning

## 91. Prepare IEEE-Ready Technical Narrative: results storytelling workflow for IEEE conference paper deadline sprint (IEEE TPDS) - ethics-by-design reporting - Variant

## 091

**Objective:** Detect non-obvious research gaps and convert them into testable opportunities. Prioritize rigor and produce publication-grade decisions for Limitations Framing.

**Prompt:** You are a literature forensics specialist. From the context below, identify unresolved contradictions in Limitations Framing and rank them by impact and tractability. Then design three testable gap statements, each with required datasets, threat-to-validity notes, and likely reviewer objections for IEEE TPDS. Project profile: discipline=computational social science; dataset=open government policy data; preferred method=causal inference pipeline; reviewer persona=methodology purist; output schema=figure-caption protocol; risk scenario=inter-annotator disagreement; timeline={timeline}; resources={resources}. **Example:** Example input: discipline=materials informatics; dataset=federated hospital dataset; timeline=14 weeks; resources=3 researchers + 2 GPUs; target venue=IEEE Transactions; reviewer persona=interdisciplinary committee member. Example outcome: figure-caption package with risk controls, reviewer-facing rationale, and milestone gates.

**Tips:** Avoid generic claims; anchor every paragraph with result-oriented language. Ensure the statistical decision tree explicitly addresses small sample size constraints and anticipated concerns from a interdisciplinary committee member.

**Expected Output:** A publication-ready figure-caption package that includes decisions, rationale, measurable criteria, and reviewer-resilient framing for IEEE Formatting.

**Difficulty:** Expert

**Category:** Validation

### 93. Optimize Abstract for IEEE Reviewers: caption and table enhancement for technical rewrite from preprint to IEEE (IEEE Access) - cross-domain readability - Variant 093

**Objective:** Pressure-test experimental design before expensive execution. Prioritize clarity and produce publication-grade decisions for Technical Positioning.

**Prompt:** Audit the experimental design for Technical Positioning. Produce control/ablation matrix, confound analysis, data leakage checks, minimum sample strategy, and statistical power guardrails suitable for IEEE Access reviewers. Include a stop/go decision protocol. Project profile: discipline=computational neuroscience; dataset=crowdsourced annotation dataset; preferred method=graph neural workflow; reviewer persona=ethics compliance reviewer; output schema=ablation plan sheet; risk scenario=compute budget reduction; timeline={timeline}; resources={resources}. Return outputs as numbered sections and end with an execution checklist.

**Example:** Example input: discipline=computational neuroscience; dataset=crowdsourced annotation dataset; timeline=14 weeks; resources=3 researchers + 2 GPUs; target venue=IEEE Access; reviewer persona=ethics compliance reviewer. Example outcome: IEEE-ready section draft with risk controls, reviewer-facing rationale, and milestone gates.

**Tips:** Design ablations to isolate one causal factor at a time. Ensure the ablation plan sheet explicitly addresses compute budget reduction and anticipated concerns from an ethics compliance reviewer.

**Expected Output:** A publication-ready IEEE-ready section draft that includes decisions, rationale, measurable criteria, and reviewer-resilient framing for Technical Positioning.

**Difficulty:** Beginner

**Category:** Optimization

### 94. Engineer a Results Section for IEEE: compliance-first editing for camera-ready compliance check (IEEE IoT Journal) - impact-focused communication - Variant 094

**Objective:** Convert technical narrative into clean, production-ready LaTeX structure. Prioritize statistical power and produce publication-grade decisions for Result Narration.

**Prompt:** Create a LaTeX writing workflow for Result Narration: section skeleton, theorem/algorithm formatting guidance, table conventions, citation macros, and cross-reference hygiene. Include common formatting errors and fixes for IEEE IoT Journal submission checks. Project profile: discipline=human-computer interaction; dataset=industrial telemetry stream; preferred method=mixed-methods protocol; reviewer persona=reproducibility auditor; output schema=rebuttal response grid; risk scenario=time-limited resubmission window; timeline={timeline}; resources={resources}. Return outputs as numbered sections and end with an execution checklist.

**Example:** Example input: discipline=human-computer interaction; dataset=industrial telemetry stream; timeline=14 weeks; resources=3 researchers + 2 GPUs; target venue=IEEE IoT Journal; reviewer persona=reproducibility auditor. Example outcome: compliance checklist with risk controls, reviewer-facing rationale, and milestone gates.

**Tips:** Draft content in semantic chunks before polishing visual layout. Ensure the rebuttal response grid explicitly addresses time-limited resubmission window and anticipated concerns from a reproducibility auditor.

**Expected Output:** A publication-ready compliance checklist that includes decisions, rationale, measurable criteria, and reviewer-resilient framing for Result Narration.

**Difficulty:** Intermediate

**Category:** Planning

## 95. Prepare IEEE-Ready Technical Narrative: results storytelling workflow for IEEE conference paper deadline sprint (IEEE TPDS) - publishable novelty framing - Variant 095

**Objective:** Prepare rigorous responses for committee or reviewer questioning. Prioritize transferability and produce publication-grade decisions for Limitations Framing.

**Prompt:** Simulate a high-pressure Q&A; on Limitations Framing. Generate 15 hard questions (methods, validity, novelty, limitations, impact) and produce concise, evidence-backed responses with fallback answers for uncertain data points. Include one slide cue per answer. Project profile: discipline=robotics; dataset=city-scale mobility records; preferred method=time-series anomaly framework; reviewer persona=applied domain expert; output schema=section rewrite pack; risk scenario=ethics board clarification request; timeline={timeline}; resources={resources}. Return outputs as numbered sections and end with an execution checklist.

**Example:** Example input: discipline=robotics; dataset=city-scale mobility records; timeline=14 weeks; resources=3 researchers + 2 GPUs; target venue=IEEE TPDS; reviewer persona=applied domain expert. Example outcome: figure-caption package with risk controls, reviewer-facing rationale, and milestone gates.

**Tips:** Structure answers as claim -> evidence -> limitation -> next action. Ensure the section rewrite pack explicitly addresses ethics board clarification request and anticipated concerns from a applied domain expert.

**Expected Output:** A publication-ready figure-caption package that includes decisions, rationale, measurable criteria, and reviewer-resilient framing for Limitations Framing.

**Difficulty:** Advanced

**Category:** Strategy

## 96. Write a High-Impact IEEE Introduction: IEEE structure workflow for IEEE Transactions submission cycle (IEEE Transactions) - practical deployment framing - Variant 096

**Objective:** Create a contribution map that defends novelty against closest prior work and defines what is publishable. Prioritize ethical compliance and produce publication-grade decisions for IEEE Formatting.

**Prompt:** Act as a senior research editor. Build a contribution architecture for IEEE Formatting in IEEE Transactions submission cycle targeting IEEE Transactions. Output sections: contribution claim stack, nearest-neighbor prior work comparison, differentiator evidence plan, failure-risk matrix, and a 30/60/90-day execution plan. Project profile: discipline=digital health; dataset=public genomics panel; preferred method=hybrid rule-neural model; reviewer persona=systems performance reviewer; output schema=action timeline; risk scenario=conflicting baseline outcomes; timeline={timeline}; resources={resources}. Return outputs as numbered sections and end with an execution checklist.

**Example:** Example input: discipline=digital health; dataset=public genomics panel; timeline=14 weeks; resources=3 researchers + 2 GPUs; target venue=IEEE Transactions; reviewer persona=systems performance reviewer. Example outcome: IEEE-ready section draft with risk controls, reviewer-facing rationale, and milestone gates.

**Tips:** Force each claim to link to one measurable piece of evidence and one comparison baseline. Ensure the action timeline explicitly addresses conflicting baseline outcomes and anticipated concerns from a systems performance reviewer.

**Expected Output:** A publication-ready IEEE-ready section draft that includes decisions, rationale, measurable criteria, and reviewer-resilient framing for IEEE Formatting.

**Difficulty:** Expert

**Category:** Analysis

## 97. Optimize Abstract for IEEE Reviewers: caption and table enhancement for technical rewrite from preprint to IEEE (IEEE Access) - method comparison clarity - Variant 097

**Objective:** Rewrite methods for reproducibility and procedural transparency. Prioritize computational efficiency and produce publication-grade decisions for Technical Positioning.

**Prompt:** Rewrite the methodology around Technical Positioning for technical rewrite from preprint to IEEE so another lab can reproduce it without author contact. Include variable definitions, preprocessing chronology, model hyperparameters, instrumentation assumptions, and reproducibility checklist required for IEEE Access. Project profile: discipline=machine learning; dataset=benchmark tabular risk dataset; preferred method=multi-objective optimizer; reviewer persona=industry impact reviewer; output schema=risk register; risk scenario=missing metadata in source data; timeline={timeline}; resources={resources}. Return outputs as numbered sections and end with an execution checklist.

**Example:** Example input: discipline=machine learning; dataset=benchmark tabular risk dataset; timeline=14 weeks; resources=3 researchers + 2 GPUs; target venue=IEEE Access; reviewer persona=industry impact reviewer. Example outcome: compliance checklist with risk controls, reviewer-facing rationale, and milestone gates.

**Tips:** Name every tool/version and include randomness-control policy. Ensure the risk register explicitly addresses missing metadata in source data and anticipated concerns from a industry impact reviewer.

**Expected Output:** A publication-ready compliance checklist that includes decisions, rationale, measurable criteria, and reviewer-resilient framing for Technical Positioning.

**Difficulty:** Beginner

**Category:** Writing

## 98. Engineer a Results Section for IEEE: compliance-first editing for camera-ready compliance check (IEEE IoT Journal) - editorial risk reduction - Variant 098

**Objective:** Craft concise, high-impact abstracts aligned with selective journal standards. Prioritize clinical relevance and produce publication-grade decisions for Result Narration.

**Prompt:** Write a Nature-style abstract for a study on Result Narration in camera-ready compliance check. Constrain to problem, approach, principal quantitative finding, boundary condition, and broader implication. Provide a weaker draft and then a stronger revised draft with rationale. Project profile: discipline=climate informatics; dataset=multi-modal image-text corpus; preferred method=semi-supervised training setup; reviewer persona=editor focused on clarity; output schema=claim-evidence table; risk scenario=incomplete ablation coverage; timeline={timeline}; resources={resources}. Return outputs as numbered sections and end with an execution checklist.

**Example:** Example input: discipline=climate informatics; dataset=multi-modal image-text corpus; timeline=14 weeks; resources=3 researchers + 2 GPUs; target venue=IEEE IoT Journal; reviewer persona=editor focused on clarity. Example outcome: figure-caption package with risk controls, reviewer-facing rationale, and milestone gates.

**Tips:** One central claim per sentence keeps abstract logic clean and persuasive. Ensure the claim-evidence table explicitly addresses incomplete ablation coverage and anticipated concerns from a editor focused on clarity.

**Expected Output:** A publication-ready figure-caption package that includes decisions, rationale, measurable criteria, and reviewer-resilient framing for Result Narration.

**Difficulty:** Intermediate

**Category:** Publication

## 99. Prepare IEEE-Ready Technical Narrative: results storytelling workflow for IEEE conference paper deadline sprint (IEEE TPDS) - venue-specific optimization - Variant 099

**Objective:** Transform visuals into evidence-rich storytelling assets. Prioritize publication readiness and produce publication-grade decisions for Limitations Framing.

**Prompt:** Generate a figure strategy for Limitations Framing with publication-grade caption drafts. For each figure, define purpose, metric, axis design, uncertainty communication, and interpretation sentence expected by IEEE TPDS. Add one caption rewrite for non-expert readers. Project profile: discipline=cybersecurity; dataset=longitudinal sensor dataset; preferred method=counterfactual evaluation approach; reviewer persona=skeptical statistician; output schema=decision matrix; risk scenario=dataset shift at deployment; timeline={timeline}; resources={resources}. Return outputs as numbered sections and end with an execution checklist.

**Example:** Example input: discipline=cybersecurity; dataset=longitudinal sensor dataset; timeline=14 weeks; resources=3 researchers + 2 GPUs; target venue=IEEE TPDS; reviewer persona=skeptical statistician. Example outcome: IEEE-ready section draft with risk controls, reviewer-facing rationale, and milestone gates.

**Tips:** Good captions stand alone and state what changed, by how much, and why it matters. Ensure the decision matrix explicitly addresses dataset shift at deployment and anticipated concerns from a skeptical statistician.

**Expected Output:** A publication-ready IEEE-ready section draft that includes decisions, rationale, measurable criteria, and reviewer-resilient framing for Limitations Framing.

**Difficulty:** Advanced

**Category:** Validation

## 100. Write a High-Impact IEEE Introduction: IEEE structure workflow for IEEE Transactions submission cycle (IEEE Transactions) - decision traceability - Variant 100

**Objective:** Embed ethics and compliance checks into the technical workflow. Prioritize novelty and produce publication-grade decisions for IEEE Formatting.

**Prompt:** Build an ethics checklist and mitigation plan for IEEE Formatting in IEEE Transactions submission cycle. Include fairness risks, privacy boundaries, human-subject concerns, reporting transparency, and audit evidence expected for IEEE Transactions review. Project profile: discipline=biomedical engineering; dataset=multi-site clinical cohort; preferred method=transformer baseline; reviewer persona=benchmarking specialist; output schema=compliance checklist; risk scenario=unexpected reviewer disagreement; timeline={timeline}; resources={resources}. Return outputs as numbered sections and end with an execution checklist.

**Example:** Example input: discipline=biomedical engineering; dataset=multi-site clinical cohort; timeline=14 weeks; resources=3 researchers + 2 GPUs; target venue=IEEE Transactions; reviewer persona=benchmarking specialist. Example outcome: compliance checklist with risk controls, reviewer-facing rationale, and milestone gates.

**Tips:** Translate ethical risks into actionable controls with owner and verification evidence. Ensure the compliance checklist explicitly addresses unexpected reviewer disagreement and anticipated concerns from a benchmarking specialist.

**Expected Output:** A publication-ready compliance checklist that includes decisions, rationale, measurable criteria, and reviewer-resilient framing for IEEE Formatting.

**Difficulty:** Expert

**Category:** Optimization

## Summary

Applying these 100 workflows systematically improves decision quality, writing clarity, and publication readiness across research cycles.
