3. Prompt Library
4. Summary

Introduction

This Publication Strategy library provides 90 original prompts engineered for high-rigor academic and technical workflows. Each prompt includes practical fields to help users move from ideation to reproducible output.

Instructions

- Select prompts by category and difficulty to match project maturity.
- Replace variables in the prompt with your specific discipline, data, and constraints.
- Use Expected Output as the acceptance criteria for quality control.
- Store outputs in versioned folders to preserve decision history.

Prompt Library

1. Publication Strategy 001: Refine Contribution Positioning for a method benchmarking campaign

Objective: Build a high-clarity strategy for Contribution Positioning by improving feasibility, reducing ambiguity, and aligning decisions with research objectives.

Prompt: You are an expert research strategist. Analyze the project context below and produce a structured plan focused on Contribution Positioning. Context: discipline={discipline}, dataset={dataset}, time horizon={timeline}, resource limits={resources}. Deliver: (1) assumptions, (2) stepwise method, (3) evaluation criteria linked to feasibility, (4) risk controls, and (5) an implementation schedule. Conclude with measurable success indicators and a concise quality checklist.

Example: Example input: discipline=computational biology; dataset=single-cell RNA-seq cohort; timeline=12 weeks; resources=2 researchers and 1 GPU node. Example outcome: a staged protocol and review-risk map with milestones.

Tips: State assumptions explicitly; define boundaries before proposing methods; tie every recommendation to a measurable criterion; include one contingency branch for likely failure points.

Expected Output: A publication-grade review-risk map containing rationale, method choices, decision criteria, risk mitigations, and implementation priorities for Contribution Positioning.

Difficulty: Beginner

Category: Methodology

2. Publication Strategy 002: Synthesize Revision Planning for a reproducibility-sensitive investigation

Objective: Build a high-clarity strategy for Revision Planning by improving rigor, reducing ambiguity, and aligning decisions with research objectives.

Prompt: You are an expert research strategist. Analyze the project context below and produce a structured plan focused on Revision Planning. Context: discipline={discipline}, dataset={dataset}, time horizon={timeline}, resource limits={resources}. Deliver: (1) assumptions, (2) stepwise method, (3) evaluation criteria linked to rigor, (4) risk controls, and (5) an implementation schedule. Conclude with measurable success indicators and a concise quality checklist.

Example: Example input: discipline=computational biology; dataset=single-cell RNA-seq cohort; timeline=12 weeks; resources=2 researchers and 1 GPU node. Example outcome: a staged protocol and timeline playbook with milestones.

Tips: State assumptions explicitly; define boundaries before proposing methods; tie every recommendation to a measurable criterion; include one contingency branch for likely failure points.

Expected Output: A publication-grade timeline playbook containing rationale, method choices, decision criteria, risk mitigations, and implementation priorities for Revision Planning.

Difficulty: Intermediate

Category: Validation

3. Publication Strategy 003: Translate Response Strategy for a cross-disciplinary study

Objective: Build a high-clarity strategy for Response Strategy by improving generalizability, reducing ambiguity, and aligning decisions with research objectives.

Prompt: You are an expert research strategist. Analyze the project context below and produce a structured plan focused on Response Strategy. Context: discipline={discipline}, dataset={dataset}, time horizon={timeline}, resource limits={resources}. Deliver: (1) assumptions, (2) stepwise method, (3) evaluation criteria linked to generalizability, (4) risk controls, and (5) an implementation schedule. Conclude with measurable success indicators and a concise quality checklist.

Example: Example input: discipline=computational biology; dataset=single-cell RNA-seq cohort; timeline=12 weeks; resources=2 researchers and 1 GPU node. Example outcome: a staged protocol and submission strategy memo with milestones.

Tips: State assumptions explicitly; define boundaries before proposing methods; tie every recommendation to a measurable criterion; include one contingency branch for likely failure points.

Expected Output: A publication-grade submission strategy memo containing rationale, method choices, decision criteria, risk mitigations, and implementation priorities for Response Strategy.

Difficulty: Advanced

Category: Writing

4. Publication Strategy 004: Model Venue Targeting for an ethics-aware deployment study

Objective: Build a high-clarity strategy for Venue Targeting by improving reproducibility, reducing ambiguity, and aligning decisions with research objectives.

Prompt: You are an expert research strategist. Analyze the project context below and produce a structured plan focused on Venue Targeting. Context: discipline={discipline}, dataset={dataset}, time horizon={timeline}, resource limits={resources}. Deliver: (1) assumptions, (2) stepwise method, (3) evaluation criteria linked to reproducibility, (4) risk controls, and (5) an implementation schedule. Conclude with measurable success indicators and a concise quality checklist.

Example: Example input: discipline=computational biology; dataset=single-cell RNA-seq cohort; timeline=12 weeks; resources=2 researchers and 1 GPU node. Example outcome: a staged protocol and review-risk map with milestones.

Tips: State assumptions explicitly; define boundaries before proposing methods; tie every recommendation to a measurable criterion; include one contingency branch for likely failure points.

Expected Output: A publication-grade review-risk map containing rationale, method choices, decision criteria, risk mitigations, and implementation priorities for Venue Targeting.

Difficulty: Expert

Category: Reasoning

5. Publication Strategy 005: Reframe Contribution Positioning for a longitudinal dataset

Objective: Build a high-clarity strategy for Contribution Positioning by improving ethical compliance, reducing ambiguity, and aligning decisions with research objectives.

Prompt: You are an expert research strategist. Analyze the project context below and produce a structured plan focused on Contribution Positioning. Context: discipline={discipline}, dataset={dataset}, time horizon={timeline}, resource limits={resources}. Deliver: (1) assumptions, (2) stepwise method, (3) evaluation criteria linked to ethical compliance, (4) risk controls, and (5) an implementation schedule. Conclude with measurable success indicators and a concise quality checklist.

Example: Example input: discipline=computational biology; dataset=single-cell RNA-seq cohort; timeline=12 weeks; resources=2 researchers and 1 GPU node. Example outcome: a staged protocol and timeline playbook with milestones.

Tips: State assumptions explicitly; define boundaries before proposing methods; tie every recommendation to a measurable criterion; include one contingency branch for likely failure points.

Expected Output: A publication-grade timeline playbook containing rationale, method choices, decision criteria, risk mitigations, and implementation priorities for Contribution Positioning.

Difficulty: Beginner

Category: Strategy

6. Publication Strategy 006: Evaluate Revision Planning for a high-impact conference submission

Objective: Build a high-clarity strategy for Revision Planning by improving cost efficiency, reducing ambiguity, and aligning decisions with research objectives.

Prompt: You are an expert research strategist. Analyze the project context below and produce a structured plan focused on Revision Planning. Context: discipline={discipline}, dataset={dataset}, time horizon={timeline}, resource limits={resources}. Deliver: (1) assumptions, (2) stepwise method, (3) evaluation criteria linked to cost efficiency, (4) risk controls, and (5) an implementation schedule. Conclude with measurable success indicators and a concise quality checklist.

Example: Example input: discipline=computational biology; dataset=single-cell RNA-seq cohort; timeline=12 weeks; resources=2 researchers and 1 GPU node. Example outcome: a staged protocol and submission strategy memo with milestones.

Tips: State assumptions explicitly; define boundaries before proposing methods; tie every recommendation to a measurable criterion; include one contingency branch for likely failure points.

Expected Output: A publication-grade submission strategy memo containing rationale, method choices, decision criteria, risk mitigations, and implementation priorities for Revision Planning.

Difficulty: Intermediate

Category: Execution

7. Publication Strategy 007: Validate Response Strategy for an emerging technology review

Objective: Build a high-clarity strategy for Response Strategy by improving computational efficiency, reducing ambiguity, and aligning decisions with research objectives.

Prompt: You are an expert research strategist. Analyze the project context below and produce a structured plan focused on Response Strategy. Context: discipline={discipline}, dataset={dataset}, time horizon={timeline}, resource limits={resources}. Deliver: (1) assumptions, (2) stepwise method, (3) evaluation criteria linked to computational efficiency, (4) risk controls, and (5) an implementation schedule. Conclude with measurable success indicators and a concise quality checklist.

Example: Example input: discipline=computational biology; dataset=single-cell RNA-seq cohort; timeline=12 weeks; resources=2 researchers and 1 GPU node. Example outcome: a staged protocol and review-risk map with milestones.

Tips: State assumptions explicitly; define boundaries before proposing methods; tie every recommendation to a measurable criterion; include one contingency branch for likely failure points.

Expected Output: A publication-grade review-risk map containing rationale, method choices, decision criteria, risk mitigations, and implementation priorities for Response Strategy.

Difficulty: Advanced

Category: Optimization

8. Publication Strategy 008: Map Venue Targeting for a policy-oriented manuscript

Objective: Build a high-clarity strategy for Venue Targeting by improving publication readiness, reducing ambiguity, and aligning decisions with research objectives.

Prompt: You are an expert research strategist. Analyze the project context below and produce a structured plan focused on Venue Targeting. Context: discipline={discipline}, dataset={dataset}, time horizon={timeline}, resource limits={resources}. Deliver: (1) assumptions, (2) stepwise method, (3) evaluation criteria linked to publication readiness, (4) risk controls, and (5) an implementation schedule. Conclude with measurable success indicators and a concise quality checklist.

Example: Example input: discipline=computational biology; dataset=single-cell RNA-seq cohort; timeline=12 weeks; resources=2 researchers and 1 GPU node. Example outcome: a staged protocol and timeline playbook with milestones.

Tips: State assumptions explicitly; define boundaries before proposing methods; tie every recommendation to a measurable criterion; include one contingency branch for likely failure points.

Expected Output: A publication-grade timeline playbook containing rationale, method choices, decision criteria, risk mitigations, and implementation priorities for Venue Targeting.

Difficulty: Expert

Category: Planning

9. Publication Strategy 009: Prioritize Contribution Positioning for an industry-backed experiment

Objective: Build a high-clarity strategy for Contribution Positioning by improving stakeholder clarity, reducing ambiguity, and aligning decisions with research objectives.

Prompt: You are an expert research strategist. Analyze the project context below and produce a structured plan focused on Contribution Positioning. Context: discipline={discipline}, dataset={dataset}, time horizon={timeline}, resource limits={resources}. Deliver: (1) assumptions, (2) stepwise method, (3) evaluation criteria linked to stakeholder clarity, (4) risk controls, and (5) an implementation schedule. Conclude with measurable success indicators and a concise quality checklist.

Example: Example input: discipline=computational biology; dataset=single-cell RNA-seq cohort; timeline=12 weeks; resources=2 researchers and 1 GPU node. Example outcome: a staged protocol and submission strategy memo with milestones.

Tips: State assumptions explicitly; define boundaries before proposing methods; tie every recommendation to a measurable criterion; include one contingency branch for likely failure points.

Expected Output: A publication-grade submission strategy memo containing rationale, method choices, decision criteria, risk mitigations, and implementation priorities for Contribution Positioning.

Difficulty: Beginner

Category: Methodology

10. Publication Strategy 010: Forecast Revision Planning for a multi-phase project

Objective: Build a high-clarity strategy for Revision Planning by improving novelty, reducing ambiguity, and aligning decisions with research objectives.

Prompt: You are an expert research strategist. Analyze the project context below and produce a structured plan focused on Revision Planning. Context: discipline={discipline}, dataset={dataset}, time horizon={timeline}, resource limits={resources}. Deliver: (1) assumptions, (2) stepwise method, (3) evaluation criteria linked to novelty, (4) risk controls, and (5) an implementation schedule. Conclude with measurable success indicators and a concise quality checklist.

Example: Example input: discipline=computational biology; dataset=single-cell RNA-seq cohort; timeline=12 weeks; resources=2 researchers and 1 GPU node. Example outcome: a staged protocol and review-risk map with milestones.

Tips: State assumptions explicitly; define boundaries before proposing methods; tie every recommendation to a measurable criterion; include one contingency branch for likely failure points.

Expected Output: A publication-grade review-risk map containing rationale, method choices, decision criteria, risk mitigations, and implementation priorities for Revision Planning.

Difficulty: Intermediate

Category: Validation

11. Publication Strategy 011: Operationalize Response Strategy for a method benchmarking campaign

Objective: Build a high-clarity strategy for Response Strategy by improving feasibility, reducing ambiguity, and aligning decisions with research objectives.

Prompt: You are an expert research strategist. Analyze the project context below and produce a structured plan focused on Response Strategy. Context: discipline={discipline}, dataset={dataset}, time horizon={timeline}, resource limits={resources}. Deliver: (1) assumptions, (2) stepwise method, (3) evaluation criteria linked to feasibility, (4) risk controls, and (5) an implementation schedule. Conclude with measurable success indicators and a concise quality checklist.

Example: Example input: discipline=computational biology; dataset=single-cell RNA-seq cohort; timeline=12 weeks; resources=2 researchers and 1 GPU node. Example outcome: a staged protocol and timeline playbook with milestones.

Tips: State assumptions explicitly; define boundaries before proposing methods; tie every recommendation to a measurable criterion; include one contingency branch for likely failure points.

Expected Output: A publication-grade timeline playbook containing rationale, method choices, decision criteria, risk mitigations, and implementation priorities for Response Strategy.

Difficulty: Advanced

Category: Writing

12. Publication Strategy 012: Compare Venue Targeting for a reproducibility-sensitive investigation

Objective: Build a high-clarity strategy for Venue Targeting by improving rigor, reducing ambiguity, and aligning decisions with research objectives.

Prompt: You are an expert research strategist. Analyze the project context below and produce a structured plan focused on Venue Targeting. Context: discipline={discipline}, dataset={dataset}, time horizon={timeline}, resource limits={resources}. Deliver: (1) assumptions, (2) stepwise method, (3) evaluation criteria linked to rigor, (4) risk controls, and (5) an implementation schedule. Conclude with measurable success indicators and a concise quality checklist.

Example: Example input: discipline=computational biology; dataset=single-cell RNA-seq cohort; timeline=12 weeks; resources=2 researchers and 1 GPU node. Example outcome: a staged protocol and submission strategy memo with milestones.

Tips: State assumptions explicitly; define boundaries before proposing methods; tie every recommendation to a measurable criterion; include one contingency branch for likely failure points.

Expected Output: A publication-grade submission strategy memo containing rationale, method choices, decision criteria, risk mitigations, and implementation priorities for Venue Targeting.

Difficulty: Expert

Category: Reasoning

13. Publication Strategy 013: Optimize Contribution Positioning for a cross-disciplinary study

Objective: Build a high-clarity strategy for Contribution Positioning by improving generalizability, reducing ambiguity, and aligning decisions with research objectives.

Prompt: You are an expert research strategist. Analyze the project context below and produce a structured plan focused on Contribution Positioning. Context: discipline={discipline}, dataset={dataset}, time horizon={timeline}, resource limits={resources}. Deliver: (1) assumptions, (2) stepwise method, (3) evaluation criteria linked to generalizability, (4) risk controls, and (5) an implementation schedule. Conclude with measurable success indicators and a concise quality checklist.

Example: Example input: discipline=computational biology; dataset=single-cell RNA-seq cohort; timeline=12 weeks; resources=2 researchers and 1 GPU node. Example outcome: a staged protocol and review-risk map with milestones.

Tips: State assumptions explicitly; define boundaries before proposing methods; tie every recommendation to a measurable criterion; include one contingency branch for likely failure points.

Expected Output: A publication-grade review-risk map containing rationale, method choices, decision criteria, risk mitigations, and implementation priorities for Contribution Positioning.

Difficulty: Beginner

Category: Strategy

14. Publication Strategy 014: Diagnose Revision Planning for an ethics-aware deployment study

Objective: Build a high-clarity strategy for Revision Planning by improving reproducibility, reducing ambiguity, and aligning decisions with research objectives.

Prompt: You are an expert research strategist. Analyze the project context below and produce a structured plan focused on Revision Planning. Context: discipline={discipline}, dataset={dataset}, time horizon={timeline}, resource limits={resources}. Deliver: (1) assumptions, (2) stepwise method, (3) evaluation criteria linked to reproducibility, (4) risk controls, and (5) an implementation schedule. Conclude with measurable success indicators and a concise quality checklist.

Example: Example input: discipline=computational biology; dataset=single-cell RNA-seq cohort; timeline=12 weeks; resources=2 researchers and 1 GPU node. Example outcome: a staged protocol and timeline playbook with milestones.

Tips: State assumptions explicitly; define boundaries before proposing methods; tie every recommendation to a measurable criterion; include one contingency branch for likely failure points.

Expected Output: A publication-grade timeline playbook containing rationale, method choices, decision criteria, risk mitigations, and implementation priorities for Revision Planning.

Difficulty: Intermediate

Category: Execution

15. Publication Strategy 015: Structure Response Strategy for a longitudinal dataset

Objective: Build a high-clarity strategy for Response Strategy by improving ethical compliance, reducing ambiguity, and aligning decisions with research objectives.

Prompt: You are an expert research strategist. Analyze the project context below and produce a structured plan focused on Response Strategy. Context: discipline={discipline}, dataset={dataset}, time horizon={timeline}, resource limits={resources}. Deliver: (1) assumptions, (2) stepwise method, (3) evaluation criteria linked to ethical compliance, (4) risk controls, and (5) an implementation schedule. Conclude with measurable success indicators and a concise quality checklist.

Example: Example input: discipline=computational biology; dataset=single-cell RNA-seq cohort; timeline=12 weeks; resources=2 researchers and 1 GPU node. Example outcome: a staged protocol and submission strategy memo with milestones.

Tips: State assumptions explicitly; define boundaries before proposing methods; tie every recommendation to a measurable criterion; include one contingency branch for likely failure points.

Expected Output: A publication-grade submission strategy memo containing rationale, method choices, decision criteria, risk mitigations, and implementation priorities for Response Strategy.

Difficulty: Advanced

Category: Optimization

16. Publication Strategy 016: Interrogate Venue Targeting for a high-impact conference submission

Objective: Build a high-clarity strategy for Venue Targeting by improving cost efficiency, reducing ambiguity, and aligning decisions with research objectives.

Prompt: You are an expert research strategist. Analyze the project context below and produce a structured plan focused on Venue Targeting. Context: discipline={discipline}, dataset={dataset}, time horizon={timeline}, resource limits={resources}. Deliver: (1) assumptions, (2) stepwise method, (3) evaluation criteria linked to cost efficiency, (4) risk controls, and (5) an implementation schedule. Conclude with measurable success indicators and a concise quality checklist.

Example: Example input: discipline=computational biology; dataset=single-cell RNA-seq cohort; timeline=12 weeks; resources=2 researchers and 1 GPU node. Example outcome: a staged protocol and review-risk map with milestones.

Tips: State assumptions explicitly; define boundaries before proposing methods; tie every recommendation to a measurable criterion; include one contingency branch for likely failure points.

Expected Output: A publication-grade review-risk map containing rationale, method choices, decision criteria, risk mitigations, and implementation priorities for Venue Targeting.

Difficulty: Expert

Category: Planning

17. Publication Strategy 017: Design Contribution Positioning for an emerging technology review

Objective: Build a high-clarity strategy for Contribution Positioning by improving computational efficiency, reducing ambiguity, and aligning decisions with research objectives.

Prompt: You are an expert research strategist. Analyze the project context below and produce a structured plan focused on Contribution Positioning. Context: discipline={discipline}, dataset={dataset}, time horizon={timeline}, resource limits={resources}. Deliver: (1) assumptions, (2) stepwise method, (3) evaluation criteria linked to computational efficiency, (4) risk controls, and (5) an implementation schedule. Conclude with measurable success indicators and a concise quality checklist.

Example: Example input: discipline=computational biology; dataset=single-cell RNA-seq cohort; timeline=12 weeks; resources=2 researchers and 1 GPU node. Example outcome: a staged protocol and timeline playbook with milestones.

Tips: State assumptions explicitly; define boundaries before proposing methods; tie every recommendation to a measurable criterion; include one contingency branch for likely failure points.

Expected Output: A publication-grade timeline playbook containing rationale, method choices, decision criteria, risk mitigations, and implementation priorities for Contribution Positioning.

Difficulty: Beginner

Category: Methodology

18. Publication Strategy 018: Refine Revision Planning for a policy-oriented manuscript

Objective: Build a high-clarity strategy for Revision Planning by improving publication readiness, reducing ambiguity, and aligning decisions with research objectives.

Prompt: You are an expert research strategist. Analyze the project context below and produce a structured plan focused on Revision Planning. Context: discipline={discipline}, dataset={dataset}, time horizon={timeline}, resource limits={resources}. Deliver: (1) assumptions, (2) stepwise method, (3) evaluation criteria linked to publication readiness, (4) risk controls, and (5) an implementation schedule. Conclude with measurable success indicators and a concise quality checklist.

Example: Example input: discipline=computational biology; dataset=single-cell RNA-seq cohort; timeline=12 weeks; resources=2 researchers and 1 GPU node. Example outcome: a staged protocol and submission strategy memo with milestones.

Tips: State assumptions explicitly; define boundaries before proposing methods; tie every recommendation to a measurable criterion; include one contingency branch for likely failure points.

Expected Output: A publication-grade submission strategy memo containing rationale, method choices, decision criteria, risk mitigations, and implementation priorities for Revision Planning.

Difficulty: Intermediate

Category: Validation

19. Publication Strategy 019: Synthesize Response Strategy for an industry-backed experiment

Objective: Build a high-clarity strategy for Response Strategy by improving stakeholder clarity, reducing ambiguity, and aligning decisions with research objectives.

Prompt: You are an expert research strategist. Analyze the project context below and produce a structured plan focused on Response Strategy. Context: discipline={discipline}, dataset={dataset}, time horizon={timeline}, resource limits={resources}. Deliver: (1) assumptions, (2) stepwise method, (3) evaluation criteria linked to stakeholder clarity, (4) risk controls, and (5) an implementation schedule. Conclude with measurable success indicators and a concise quality checklist.

Example: Example input: discipline=computational biology; dataset=single-cell RNA-seq cohort; timeline=12 weeks; resources=2 researchers and 1 GPU node. Example outcome: a staged protocol and review-risk map with milestones.

Tips: State assumptions explicitly; define boundaries before proposing methods; tie every recommendation to a measurable criterion; include one contingency branch for likely failure points.

Expected Output: A publication-grade review-risk map containing rationale, method choices, decision criteria, risk mitigations, and implementation priorities for Response Strategy.

Difficulty: Advanced

Category: Writing

20. Publication Strategy 020: Translate Venue Targeting for a multi-phase project

Objective: Build a high-clarity strategy for Venue Targeting by improving novelty, reducing ambiguity, and aligning decisions with research objectives.

Prompt: You are an expert research strategist. Analyze the project context below and produce a structured plan focused on Venue Targeting. Context: discipline={discipline}, dataset={dataset}, time horizon={timeline}, resource limits={resources}. Deliver: (1) assumptions, (2) stepwise method, (3) evaluation criteria linked to novelty, (4) risk controls, and (5) an implementation schedule. Conclude with measurable success indicators and a concise quality checklist.

Example: Example input: discipline=computational biology; dataset=single-cell RNA-seq cohort; timeline=12 weeks; resources=2 researchers and 1 GPU node. Example outcome: a staged protocol and timeline playbook with milestones.

Tips: State assumptions explicitly; define boundaries before proposing methods; tie every recommendation to a measurable criterion; include one contingency branch for likely failure points.

Expected Output: A publication-grade timeline playbook containing rationale, method choices, decision criteria, risk mitigations, and implementation priorities for Venue Targeting.

Difficulty: Expert

Category: Reasoning

21. Publication Strategy 021: Model Contribution Positioning for a method benchmarking campaign

Objective: Build a high-clarity strategy for Contribution Positioning by improving feasibility, reducing ambiguity, and aligning decisions with research objectives.

Prompt: You are an expert research strategist. Analyze the project context below and produce a structured plan focused on Contribution Positioning. Context: discipline={discipline}, dataset={dataset}, time horizon={timeline}, resource limits={resources}. Deliver: (1) assumptions, (2) stepwise method, (3) evaluation criteria linked to feasibility, (4) risk controls, and (5) an implementation schedule. Conclude with measurable success indicators and a concise quality checklist.

Example: Example input: discipline=computational biology; dataset=single-cell RNA-seq cohort; timeline=12 weeks; resources=2 researchers and 1 GPU node. Example outcome: a staged protocol and submission strategy memo with milestones.

Tips: State assumptions explicitly; define boundaries before proposing methods; tie every recommendation to a measurable criterion; include one contingency branch for likely failure points.

Expected Output: A publication-grade submission strategy memo containing rationale, method choices, decision criteria, risk mitigations, and implementation priorities for Contribution Positioning.

Difficulty: Beginner

Category: Strategy

22. Publication Strategy 022: Reframe Revision Planning for a reproducibility-sensitive investigation

Objective: Build a high-clarity strategy for Revision Planning by improving rigor, reducing ambiguity, and aligning decisions with research objectives.

Prompt: You are an expert research strategist. Analyze the project context below and produce a structured plan focused on Revision Planning. Context: discipline={discipline}, dataset={dataset}, time horizon={timeline}, resource limits={resources}. Deliver: (1) assumptions, (2) stepwise method, (3) evaluation criteria linked to rigor, (4) risk controls, and (5) an implementation schedule. Conclude with measurable success indicators and a concise quality checklist.

Example: Example input: discipline=computational biology; dataset=single-cell RNA-seq cohort; timeline=12 weeks; resources=2 researchers and 1 GPU node. Example outcome: a staged protocol and review-risk map with milestones.

Tips: State assumptions explicitly; define boundaries before proposing methods; tie every recommendation to a measurable criterion; include one contingency branch for likely failure points.

Expected Output: A publication-grade review-risk map containing rationale, method choices, decision criteria, risk mitigations, and implementation priorities for Revision Planning.

Difficulty: Intermediate

Category: Execution

23. Publication Strategy 023: Evaluate Response Strategy for a cross-disciplinary study

Objective: Build a high-clarity strategy for Response Strategy by improving generalizability, reducing ambiguity, and aligning decisions with research objectives.

Prompt: You are an expert research strategist. Analyze the project context below and produce a structured plan focused on Response Strategy. Context: discipline={discipline}, dataset={dataset}, time horizon={timeline}, resource limits={resources}. Deliver: (1) assumptions, (2) stepwise method, (3) evaluation criteria linked to generalizability, (4) risk controls, and (5) an implementation schedule. Conclude with measurable success indicators and a concise quality checklist.

Example: Example input: discipline=computational biology; dataset=single-cell RNA-seq cohort; timeline=12 weeks; resources=2 researchers and 1 GPU node. Example outcome: a staged protocol and timeline playbook with milestones.

Tips: State assumptions explicitly; define boundaries before proposing methods; tie every recommendation to a measurable criterion; include one contingency branch for likely failure points.

Expected Output: A publication-grade timeline playbook containing rationale, method choices, decision criteria, risk mitigations, and implementation priorities for Response Strategy.

Difficulty: Advanced

Category: Optimization

24. Publication Strategy 024: Validate Venue Targeting for an ethics-aware deployment study

Objective: Build a high-clarity strategy for Venue Targeting by improving reproducibility, reducing ambiguity, and aligning decisions with research objectives.

Prompt: You are an expert research strategist. Analyze the project context below and produce a structured plan focused on Venue Targeting. Context: discipline={discipline}, dataset={dataset}, time horizon={timeline}, resource limits={resources}. Deliver: (1) assumptions, (2) stepwise method, (3) evaluation criteria linked to reproducibility, (4) risk controls, and (5) an implementation schedule. Conclude with measurable success indicators and a concise quality checklist.

Example: Example input: discipline=computational biology; dataset=single-cell RNA-seq cohort; timeline=12 weeks; resources=2 researchers and 1 GPU node. Example outcome: a staged protocol and submission strategy memo with milestones.

Tips: State assumptions explicitly; define boundaries before proposing methods; tie every recommendation to a measurable criterion; include one contingency branch for likely failure points.

Expected Output: A publication-grade submission strategy memo containing rationale, method choices, decision criteria, risk mitigations, and implementation priorities for Venue Targeting.

Difficulty: Expert

Category: Planning

25. Publication Strategy 025: Map Contribution Positioning for a longitudinal dataset

Objective: Build a high-clarity strategy for Contribution Positioning by improving ethical compliance, reducing ambiguity, and aligning decisions with research objectives.

Prompt: You are an expert research strategist. Analyze the project context below and produce a structured plan focused on Contribution Positioning. Context: discipline={discipline}, dataset={dataset}, time horizon={timeline}, resource limits={resources}. Deliver: (1) assumptions, (2) stepwise method, (3) evaluation criteria linked to ethical compliance, (4) risk controls, and (5) an implementation schedule. Conclude with measurable success indicators and a concise quality checklist.

Example: Example input: discipline=computational biology; dataset=single-cell RNA-seq cohort; timeline=12 weeks; resources=2 researchers and 1 GPU node. Example outcome: a staged protocol and review-risk map with milestones.

Tips: State assumptions explicitly; define boundaries before proposing methods; tie every recommendation to a measurable criterion; include one contingency branch for likely failure points.

Expected Output: A publication-grade review-risk map containing rationale, method choices, decision criteria, risk mitigations, and implementation priorities for Contribution Positioning.

Difficulty: Beginner

Category: Methodology

26. Publication Strategy 026: Prioritize Revision Planning for a high-impact conference submission

Objective: Build a high-clarity strategy for Revision Planning by improving cost efficiency, reducing ambiguity, and aligning decisions with research objectives.

Prompt: You are an expert research strategist. Analyze the project context below and produce a structured plan focused on Revision Planning. Context: discipline={discipline}, dataset={dataset}, time horizon={timeline}, resource limits={resources}. Deliver: (1) assumptions, (2) stepwise method, (3) evaluation criteria linked to cost efficiency, (4) risk controls, and (5) an implementation schedule. Conclude with measurable success indicators and a concise quality checklist.

Example: Example input: discipline=computational biology; dataset=single-cell RNA-seq cohort; timeline=12 weeks; resources=2 researchers and 1 GPU node. Example outcome: a staged protocol and timeline playbook with milestones.

Tips: State assumptions explicitly; define boundaries before proposing methods; tie every recommendation to a measurable criterion; include one contingency branch for likely failure points.

Expected Output: A publication-grade timeline playbook containing rationale, method choices, decision criteria, risk mitigations, and implementation priorities for Revision Planning.

Difficulty: Intermediate

Category: Validation

27. Publication Strategy 027: Forecast Response Strategy for an emerging technology review

Objective: Build a high-clarity strategy for Response Strategy by improving computational efficiency, reducing ambiguity, and aligning decisions with research objectives.

Prompt: You are an expert research strategist. Analyze the project context below and produce a structured plan focused on Response Strategy. Context: discipline={discipline}, dataset={dataset}, time horizon={timeline}, resource limits={resources}. Deliver: (1) assumptions, (2) stepwise method, (3) evaluation criteria linked to computational efficiency, (4) risk controls, and (5) an implementation schedule. Conclude with measurable success indicators and a concise quality checklist.

Example: Example input: discipline=computational biology; dataset=single-cell RNA-seq cohort; timeline=12 weeks; resources=2 researchers and 1 GPU node. Example outcome: a staged protocol and submission strategy memo with milestones.

Tips: State assumptions explicitly; define boundaries before proposing methods; tie every recommendation to a measurable criterion; include one contingency branch for likely failure points.

Expected Output: A publication-grade submission strategy memo containing rationale, method choices, decision criteria, risk mitigations, and implementation priorities for Response Strategy.

Difficulty: Advanced

Category: Writing

28. Publication Strategy 028: Operationalize Venue Targeting for a policy-oriented manuscript

Objective: Build a high-clarity strategy for Venue Targeting by improving publication readiness, reducing ambiguity, and aligning decisions with research objectives.

Prompt: You are an expert research strategist. Analyze the project context below and produce a structured plan focused on Venue Targeting. Context: discipline={discipline}, dataset={dataset}, time horizon={timeline}, resource limits={resources}. Deliver: (1) assumptions, (2) stepwise method, (3) evaluation criteria linked to publication readiness, (4) risk controls, and (5) an implementation schedule. Conclude with measurable success indicators and a concise quality checklist.

Example: Example input: discipline=computational biology; dataset=single-cell RNA-seq cohort; timeline=12 weeks; resources=2 researchers and 1 GPU node. Example outcome: a staged protocol and review-risk map with milestones.

Tips: State assumptions explicitly; define boundaries before proposing methods; tie every recommendation to a measurable criterion; include one contingency branch for likely failure points.

Expected Output: A publication-grade review-risk map containing rationale, method choices, decision criteria, risk mitigations, and implementation priorities for Venue Targeting.

Difficulty: Expert

Category: Reasoning

29. Publication Strategy 029: Compare Contribution Positioning for an industry-backed experiment

Objective: Build a high-clarity strategy for Contribution Positioning by improving stakeholder clarity, reducing ambiguity, and aligning decisions with research objectives.

Prompt: You are an expert research strategist. Analyze the project context below and produce a structured plan focused on Contribution Positioning. Context: discipline={discipline}, dataset={dataset}, time horizon={timeline}, resource limits={resources}. Deliver: (1) assumptions, (2) stepwise method, (3) evaluation criteria linked to

stakeholder clarity, (4) risk controls, and (5) an implementation schedule. Conclude with measurable success indicators and a concise quality checklist.

Example: Example input: discipline=computational biology; dataset=single-cell RNA-seq cohort; timeline=12 weeks; resources=2 researchers and 1 GPU node. Example outcome: a staged protocol and timeline playbook with milestones.

Tips: State assumptions explicitly; define boundaries before proposing methods; tie every recommendation to a measurable criterion; include one contingency branch for likely failure points.

Expected Output: A publication-grade timeline playbook containing rationale, method choices, decision criteria, risk mitigations, and implementation priorities for Contribution Positioning.

Difficulty: Beginner

Category: Strategy

30. Publication Strategy 030: Optimize Revision Planning for a multi-phase project

Objective: Build a high-clarity strategy for Revision Planning by improving novelty, reducing ambiguity, and aligning decisions with research objectives.

Prompt: You are an expert research strategist. Analyze the project context below and produce a structured plan focused on Revision Planning. Context: discipline={discipline}, dataset={dataset}, time horizon={timeline}, resource limits={resources}. Deliver: (1) assumptions, (2) stepwise method, (3) evaluation criteria linked to novelty, (4) risk controls, and (5) an implementation schedule. Conclude with measurable success indicators and a concise quality checklist.

Example: Example input: discipline=computational biology; dataset=single-cell RNA-seq cohort; timeline=12 weeks; resources=2 researchers and 1 GPU node. Example outcome: a staged protocol and submission strategy memo with milestones.

Tips: State assumptions explicitly; define boundaries before proposing methods; tie every recommendation to a measurable criterion; include one contingency branch for likely failure points.

Expected Output: A publication-grade submission strategy memo containing rationale, method choices, decision criteria, risk mitigations, and implementation priorities for Revision Planning.

Difficulty: Intermediate

Category: Execution

31. Publication Strategy 031: Diagnose Response Strategy for a method benchmarking campaign

Objective: Build a high-clarity strategy for Response Strategy by improving feasibility, reducing ambiguity, and aligning decisions with research objectives.

Prompt: You are an expert research strategist. Analyze the project context below and produce a structured plan focused on Response Strategy. Context: discipline={discipline}, dataset={dataset}, time horizon={timeline}, resource limits={resources}. Deliver: (1) assumptions, (2) stepwise method, (3) evaluation criteria linked to feasibility, (4) risk controls, and (5) an implementation schedule. Conclude with measurable success indicators and a concise quality checklist.

Example: Example input: discipline=computational biology; dataset=single-cell RNA-seq cohort; timeline=12 weeks; resources=2 researchers and 1 GPU node. Example outcome: a staged protocol and review-risk map with milestones.

Tips: State assumptions explicitly; define boundaries before proposing methods; tie every recommendation to a measurable criterion; include one contingency branch for likely failure points.

Expected Output: A publication-grade review-risk map containing rationale, method choices, decision criteria, risk mitigations, and implementation priorities for Response Strategy.

Difficulty: Advanced

Category: Optimization

32. Publication Strategy 032: Structure Venue Targeting for a reproducibility-sensitive investigation

Objective: Build a high-clarity strategy for Venue Targeting by improving rigor, reducing ambiguity, and aligning decisions with research objectives.

Prompt: You are an expert research strategist. Analyze the project context below and produce a structured plan focused on Venue Targeting. Context: discipline={discipline}, dataset={dataset}, time horizon={timeline}, resource limits={resources}. Deliver: (1) assumptions, (2) stepwise method, (3) evaluation criteria linked to rigor, (4) risk controls, and (5) an implementation schedule. Conclude with measurable success indicators and a concise quality checklist.

Example: Example input: discipline=computational biology; dataset=single-cell RNA-seq cohort; timeline=12 weeks; resources=2 researchers and 1 GPU node. Example outcome: a staged protocol and timeline playbook with milestones.

Tips: State assumptions explicitly; define boundaries before proposing methods; tie every recommendation to a measurable criterion; include one contingency branch for likely failure points.

Expected Output: A publication-grade timeline playbook containing rationale, method choices, decision criteria, risk mitigations, and implementation priorities for Venue Targeting.

Difficulty: Expert

Category: Planning

33. Publication Strategy 033: Interrogate Contribution Positioning for a cross-disciplinary study

Objective: Build a high-clarity strategy for Contribution Positioning by improving generalizability, reducing ambiguity, and aligning decisions with research objectives.

Prompt: You are an expert research strategist. Analyze the project context below and produce a structured plan focused on Contribution Positioning. Context: discipline={discipline}, dataset={dataset}, time horizon={timeline}, resource limits={resources}. Deliver: (1) assumptions, (2) stepwise method, (3) evaluation criteria linked to generalizability, (4) risk controls, and (5) an implementation schedule. Conclude with measurable success indicators and a concise quality checklist.

Example: Example input: discipline=computational biology; dataset=single-cell RNA-seq cohort; timeline=12 weeks; resources=2 researchers and 1 GPU node. Example outcome: a staged protocol and submission strategy memo with milestones.

Tips: State assumptions explicitly; define boundaries before proposing methods; tie every recommendation to a measurable criterion; include one contingency branch for likely failure points.

Expected Output: A publication-grade submission strategy memo containing rationale, method choices, decision criteria, risk mitigations, and implementation priorities for Contribution Positioning.

Difficulty: Beginner

Category: Methodology

34. Publication Strategy 034: Design Revision Planning for an ethics-aware deployment study

Objective: Build a high-clarity strategy for Revision Planning by improving reproducibility, reducing ambiguity, and aligning decisions with research objectives.

Prompt: You are an expert research strategist. Analyze the project context below and produce a structured plan focused on Revision Planning. Context: discipline={discipline}, dataset={dataset}, time horizon={timeline}, resource limits={resources}. Deliver: (1) assumptions, (2) stepwise method, (3) evaluation criteria linked to reproducibility, (4) risk controls, and (5) an implementation schedule. Conclude with measurable success indicators and a concise quality checklist.

Example: Example input: discipline=computational biology; dataset=single-cell RNA-seq cohort; timeline=12 weeks; resources=2 researchers and 1 GPU node. Example outcome: a staged protocol and review-risk map with milestones.

Tips: State assumptions explicitly; define boundaries before proposing methods; tie every recommendation to a measurable criterion; include one contingency branch for likely failure points.

Expected Output: A publication-grade review-risk map containing rationale, method choices, decision criteria, risk mitigations, and implementation priorities for Revision Planning.

Difficulty: Intermediate

Category: Validation

35. Publication Strategy 035: Refine Response Strategy for a longitudinal dataset

Objective: Build a high-clarity strategy for Response Strategy by improving ethical compliance, reducing ambiguity, and aligning decisions with research objectives.

Prompt: You are an expert research strategist. Analyze the project context below and produce a structured plan focused on Response Strategy. Context: discipline={discipline}, dataset={dataset}, time horizon={timeline}, resource limits={resources}. Deliver: (1) assumptions, (2) stepwise method, (3) evaluation criteria linked to ethical compliance, (4) risk controls, and (5) an implementation schedule. Conclude with measurable success indicators and a concise quality checklist.

Example: Example input: discipline=computational biology; dataset=single-cell RNA-seq cohort; timeline=12 weeks; resources=2 researchers and 1 GPU node. Example outcome: a staged protocol and timeline playbook with milestones.

Tips: State assumptions explicitly; define boundaries before proposing methods; tie every recommendation to a measurable criterion; include one contingency branch for likely failure points.

Expected Output: A publication-grade timeline playbook containing rationale, method choices, decision criteria, risk mitigations, and implementation priorities for Response Strategy.

Difficulty: Advanced

Category: Writing

36. Publication Strategy 036: Synthesize Venue Targeting for a high-impact conference submission

Objective: Build a high-clarity strategy for Venue Targeting by improving cost efficiency, reducing ambiguity, and aligning decisions with research objectives.

Prompt: You are an expert research strategist. Analyze the project context below and produce a structured plan focused on Venue Targeting. Context: discipline={discipline}, dataset={dataset}, time horizon={timeline}, resource limits={resources}. Deliver: (1) assumptions, (2) stepwise method, (3) evaluation criteria linked to cost efficiency, (4) risk controls, and (5) an implementation schedule. Conclude with measurable success indicators and a concise quality checklist.

Example: Example input: discipline=computational biology; dataset=single-cell RNA-seq cohort; timeline=12 weeks; resources=2 researchers and 1 GPU node. Example outcome: a staged protocol and submission strategy memo with milestones.

Tips: State assumptions explicitly; define boundaries before proposing methods; tie every recommendation to a measurable criterion; include one contingency branch for likely failure points.

Expected Output: A publication-grade submission strategy memo containing rationale, method choices, decision criteria, risk mitigations, and implementation priorities for Venue Targeting.

Difficulty: Expert

Category: Reasoning

37. Publication Strategy 037: Translate Contribution Positioning for an emerging technology review

Objective: Build a high-clarity strategy for Contribution Positioning by improving computational efficiency, reducing ambiguity, and aligning decisions with research objectives.

Prompt: You are an expert research strategist. Analyze the project context below and produce a structured plan focused on Contribution Positioning. Context: discipline={discipline}, dataset={dataset}, time horizon={timeline}, resource limits={resources}. Deliver: (1) assumptions, (2) stepwise method, (3) evaluation criteria linked to computational efficiency, (4) risk controls, and (5) an implementation schedule. Conclude with measurable success indicators and a concise quality checklist.

Example: Example input: discipline=computational biology; dataset=single-cell RNA-seq cohort; timeline=12 weeks; resources=2 researchers and 1 GPU node. Example outcome: a staged protocol and review-risk map with milestones.

Tips: State assumptions explicitly; define boundaries before proposing methods; tie every recommendation to a measurable criterion; include one contingency branch for likely failure points.

Expected Output: A publication-grade review-risk map containing rationale, method choices, decision criteria, risk mitigations, and implementation priorities for Contribution Positioning.

Difficulty: Beginner

Category: Strategy

38. Publication Strategy 038: Model Revision Planning for a policy-oriented manuscript

Objective: Build a high-clarity strategy for Revision Planning by improving publication readiness, reducing ambiguity, and aligning decisions with research objectives.

Prompt: You are an expert research strategist. Analyze the project context below and produce a structured plan focused on Revision Planning. Context: discipline={discipline}, dataset={dataset}, time horizon={timeline}, resource limits={resources}. Deliver: (1) assumptions, (2) stepwise method, (3) evaluation criteria linked to publication readiness, (4) risk controls, and (5) an implementation schedule. Conclude with measurable success indicators and a concise quality checklist.

Example: Example input: discipline=computational biology; dataset=single-cell RNA-seq cohort; timeline=12 weeks; resources=2 researchers and 1 GPU node. Example outcome: a staged protocol and timeline playbook with milestones.

Tips: State assumptions explicitly; define boundaries before proposing methods; tie every recommendation to a measurable criterion; include one contingency branch for likely failure points.

Expected Output: A publication-grade timeline playbook containing rationale, method choices, decision criteria, risk mitigations, and implementation priorities for Revision Planning.

Difficulty: Intermediate

Category: Execution

39. Publication Strategy 039: Reframe Response Strategy for an industry-backed experiment

Objective: Build a high-clarity strategy for Response Strategy by improving stakeholder clarity, reducing ambiguity, and aligning decisions with research objectives.

Prompt: You are an expert research strategist. Analyze the project context below and produce a structured plan focused on Response Strategy. Context: discipline={discipline}, dataset={dataset}, time horizon={timeline}, resource limits={resources}. Deliver: (1) assumptions, (2) stepwise method, (3) evaluation criteria linked to stakeholder clarity, (4) risk controls, and (5) an implementation schedule. Conclude with measurable success indicators and a concise quality checklist.

Example: Example input: discipline=computational biology; dataset=single-cell RNA-seq cohort; timeline=12 weeks; resources=2 researchers and 1 GPU node. Example outcome: a staged protocol and submission strategy memo with milestones.

Tips: State assumptions explicitly; define boundaries before proposing methods; tie every recommendation to a measurable criterion; include one contingency branch for likely failure points.

Expected Output: A publication-grade submission strategy memo containing rationale, method choices, decision criteria, risk mitigations, and implementation priorities for Response Strategy.

Difficulty: Advanced

Category: Optimization

40. Publication Strategy 040: Evaluate Venue Targeting for a multi-phase project

Objective: Build a high-clarity strategy for Venue Targeting by improving novelty, reducing ambiguity, and aligning decisions with research objectives.

Prompt: You are an expert research strategist. Analyze the project context below and produce a structured plan focused on Venue Targeting. Context: discipline={discipline}, dataset={dataset}, time horizon={timeline}, resource limits={resources}. Deliver: (1) assumptions, (2) stepwise method, (3) evaluation criteria linked to novelty, (4) risk controls, and (5) an implementation schedule. Conclude with measurable success indicators and a concise quality checklist.

Example: Example input: discipline=computational biology; dataset=single-cell RNA-seq cohort; timeline=12 weeks; resources=2 researchers and 1 GPU node. Example outcome: a staged protocol and review-risk map with milestones.

Tips: State assumptions explicitly; define boundaries before proposing methods; tie every recommendation to a measurable criterion; include one contingency branch for likely failure points.

Expected Output: A publication-grade review-risk map containing rationale, method choices, decision criteria, risk mitigations, and implementation priorities for Venue Targeting.

Difficulty: Expert

Category: Planning

41. Publication Strategy 041: Validate Contribution Positioning for a method benchmarking campaign

Objective: Build a high-clarity strategy for Contribution Positioning by improving feasibility, reducing ambiguity, and aligning decisions with research objectives.

Prompt: You are an expert research strategist. Analyze the project context below and produce a structured plan focused on Contribution Positioning. Context: discipline={discipline}, dataset={dataset}, time horizon={timeline}, resource limits={resources}. Deliver: (1) assumptions, (2) stepwise method, (3) evaluation criteria linked to feasibility, (4) risk controls, and (5) an implementation schedule. Conclude with measurable success indicators and a concise quality checklist.

Example: Example input: discipline=computational biology; dataset=single-cell RNA-seq cohort; timeline=12 weeks; resources=2 researchers and 1 GPU node. Example outcome: a staged protocol and timeline playbook with milestones.

Tips: State assumptions explicitly; define boundaries before proposing methods; tie every recommendation to a measurable criterion; include one contingency branch for likely failure points.

Expected Output: A publication-grade timeline playbook containing rationale, method choices, decision criteria, risk mitigations, and implementation priorities for Contribution Positioning.

Difficulty: Beginner

Category: Methodology

42. Publication Strategy 042: Map Revision Planning for a reproducibility-sensitive investigation

Objective: Build a high-clarity strategy for Revision Planning by improving rigor, reducing ambiguity, and aligning decisions with research objectives.

Prompt: You are an expert research strategist. Analyze the project context below and produce a structured plan focused on Revision Planning. Context: discipline={discipline}, dataset={dataset}, time horizon={timeline}, resource limits={resources}. Deliver: (1) assumptions, (2) stepwise method, (3) evaluation criteria linked to rigor, (4) risk controls, and (5) an implementation schedule. Conclude with measurable success indicators and a concise quality checklist.

Example: Example input: discipline=computational biology; dataset=single-cell RNA-seq cohort; timeline=12 weeks; resources=2 researchers and 1 GPU node. Example outcome: a staged protocol and submission strategy memo with milestones.

Tips: State assumptions explicitly; define boundaries before proposing methods; tie every recommendation to a measurable criterion; include one contingency branch for likely failure points.

Expected Output: A publication-grade submission strategy memo containing rationale, method choices, decision criteria, risk mitigations, and implementation priorities for Revision Planning.

Difficulty: Intermediate

Category: Validation

43. Publication Strategy 043: Prioritize Response Strategy for a cross-disciplinary study

Objective: Build a high-clarity strategy for Response Strategy by improving generalizability, reducing ambiguity, and aligning decisions with research objectives.

Prompt: You are an expert research strategist. Analyze the project context below and produce a structured plan focused on Response Strategy. Context: discipline={discipline}, dataset={dataset}, time horizon={timeline}, resource limits={resources}. Deliver: (1) assumptions, (2) stepwise method, (3) evaluation criteria linked to generalizability, (4) risk controls, and (5) an implementation schedule. Conclude with measurable success indicators and a concise quality checklist.

Example: Example input: discipline=computational biology; dataset=single-cell RNA-seq cohort; timeline=12 weeks; resources=2 researchers and 1 GPU node. Example outcome: a staged protocol and review-risk map with milestones.

Tips: State assumptions explicitly; define boundaries before proposing methods; tie every recommendation to a measurable criterion; include one contingency branch for likely failure points.

Expected Output: A publication-grade review-risk map containing rationale, method choices, decision criteria, risk mitigations, and implementation priorities for Response Strategy.

Difficulty: Advanced

Category: Writing

44. Publication Strategy 044: Forecast Venue Targeting for an ethics-aware deployment study

Objective: Build a high-clarity strategy for Venue Targeting by improving reproducibility, reducing ambiguity, and aligning decisions with research objectives.

Prompt: You are an expert research strategist. Analyze the project context below and produce a structured plan focused on Venue Targeting. Context: discipline={discipline}, dataset={dataset}, time horizon={timeline}, resource limits={resources}. Deliver: (1) assumptions, (2) stepwise method, (3) evaluation criteria linked to reproducibility, (4) risk controls, and (5) an implementation schedule. Conclude with measurable success indicators and a concise quality checklist.

Example: Example input: discipline=computational biology; dataset=single-cell RNA-seq cohort; timeline=12 weeks; resources=2 researchers and 1 GPU node. Example outcome: a staged protocol and timeline playbook with milestones.

Tips: State assumptions explicitly; define boundaries before proposing methods; tie every recommendation to a measurable criterion; include one contingency branch for likely failure points.

Expected Output: A publication-grade timeline playbook containing rationale, method choices, decision criteria, risk mitigations, and implementation priorities for Venue Targeting.

Difficulty: Expert

Category: Reasoning

45. Publication Strategy 045: Operationalize Contribution Positioning for a longitudinal dataset

Objective: Build a high-clarity strategy for Contribution Positioning by improving ethical compliance, reducing ambiguity, and aligning decisions with research objectives.

Prompt: You are an expert research strategist. Analyze the project context below and produce a structured plan focused on Contribution Positioning. Context: discipline={discipline}, dataset={dataset}, time horizon={timeline}, resource limits={resources}. Deliver: (1) assumptions, (2) stepwise method, (3) evaluation criteria linked to ethical compliance, (4) risk controls, and (5) an implementation schedule. Conclude with measurable success indicators and a concise quality checklist.

Example: Example input: discipline=computational biology; dataset=single-cell RNA-seq cohort; timeline=12 weeks; resources=2 researchers and 1 GPU node. Example outcome: a staged protocol and submission strategy memo with milestones.

Tips: State assumptions explicitly; define boundaries before proposing methods; tie every recommendation to a measurable criterion; include one contingency branch for likely failure points.

Expected Output: A publication-grade submission strategy memo containing rationale, method choices, decision criteria, risk mitigations, and implementation priorities for Contribution Positioning.

Difficulty: Beginner

Category: Strategy

46. Publication Strategy 046: Compare Revision Planning for a high-impact conference submission

Objective: Build a high-clarity strategy for Revision Planning by improving cost efficiency, reducing ambiguity, and aligning decisions with research objectives.

Prompt: You are an expert research strategist. Analyze the project context below and produce a structured plan focused on Revision Planning. Context: discipline={discipline}, dataset={dataset}, time horizon={timeline}, resource limits={resources}. Deliver: (1) assumptions, (2) stepwise method, (3) evaluation criteria linked to cost efficiency, (4) risk controls, and (5) an implementation schedule. Conclude with measurable success indicators and a concise quality checklist.

Example: Example input: discipline=computational biology; dataset=single-cell RNA-seq cohort; timeline=12 weeks; resources=2 researchers and 1 GPU node. Example outcome: a staged protocol and review-risk map with milestones.

Tips: State assumptions explicitly; define boundaries before proposing methods; tie every recommendation to a measurable criterion; include one contingency branch for likely failure points.

Expected Output: A publication-grade review-risk map containing rationale, method choices, decision criteria, risk mitigations, and implementation priorities for Revision Planning.

Difficulty: Intermediate

Category: Execution

47. Publication Strategy 047: Optimize Response Strategy for an emerging technology review

Objective: Build a high-clarity strategy for Response Strategy by improving computational efficiency, reducing ambiguity, and aligning decisions with research objectives.

Prompt: You are an expert research strategist. Analyze the project context below and produce a structured plan focused on Response Strategy. Context: discipline={discipline}, dataset={dataset}, time horizon={timeline}, resource limits={resources}. Deliver: (1) assumptions, (2) stepwise method, (3) evaluation criteria linked to computational efficiency, (4) risk controls, and (5) an implementation schedule. Conclude with measurable success indicators and a concise quality checklist.

Example: Example input: discipline=computational biology; dataset=single-cell RNA-seq cohort; timeline=12 weeks; resources=2 researchers and 1 GPU node. Example outcome: a staged protocol and timeline playbook with milestones.

Tips: State assumptions explicitly; define boundaries before proposing methods; tie every recommendation to a measurable criterion; include one contingency branch for likely failure points.

Expected Output: A publication-grade timeline playbook containing rationale, method choices, decision criteria, risk mitigations, and implementation priorities for Response Strategy.

Difficulty: Advanced

Category: Optimization

48. Publication Strategy 048: Diagnose Venue Targeting for a policy-oriented manuscript

Objective: Build a high-clarity strategy for Venue Targeting by improving publication readiness, reducing ambiguity, and aligning decisions with research objectives.

Prompt: You are an expert research strategist. Analyze the project context below and produce a structured plan focused on Venue Targeting. Context: discipline={discipline}, dataset={dataset}, time horizon={timeline}, resource limits={resources}. Deliver: (1) assumptions, (2) stepwise method, (3) evaluation criteria linked to publication readiness, (4) risk controls, and (5) an implementation schedule. Conclude with measurable success indicators and a concise quality checklist.

Example: Example input: discipline=computational biology; dataset=single-cell RNA-seq cohort; timeline=12 weeks; resources=2 researchers and 1 GPU node. Example outcome: a staged protocol and submission strategy memo with milestones.

Tips: State assumptions explicitly; define boundaries before proposing methods; tie every recommendation to a measurable criterion; include one contingency branch for likely failure points.

Expected Output: A publication-grade submission strategy memo containing rationale, method choices, decision criteria, risk mitigations, and implementation priorities for Venue Targeting.

Difficulty: Expert

Category: Planning

49. Publication Strategy 049: Structure Contribution Positioning for an industry-backed experiment

Objective: Build a high-clarity strategy for Contribution Positioning by improving stakeholder clarity, reducing ambiguity, and aligning decisions with research objectives.

Prompt: You are an expert research strategist. Analyze the project context below and produce a structured plan focused on Contribution Positioning. Context: discipline={discipline}, dataset={dataset}, time horizon={timeline}, resource limits={resources}. Deliver: (1) assumptions, (2) stepwise method, (3) evaluation criteria linked to stakeholder clarity, (4) risk controls, and (5) an implementation schedule. Conclude with measurable success indicators and a concise quality checklist.

Example: Example input: discipline=computational biology; dataset=single-cell RNA-seq cohort; timeline=12 weeks; resources=2 researchers and 1 GPU node. Example outcome: a staged protocol and review-risk map with milestones.

Tips: State assumptions explicitly; define boundaries before proposing methods; tie every recommendation to a measurable criterion; include one contingency branch for likely failure points.

Expected Output: A publication-grade review-risk map containing rationale, method choices, decision criteria, risk mitigations, and implementation priorities for Contribution Positioning.

Difficulty: Beginner

Category: Methodology

50. Publication Strategy 050: Interrogate Revision Planning for a multi-phase project

Objective: Build a high-clarity strategy for Revision Planning by improving novelty, reducing ambiguity, and aligning decisions with research objectives.

Prompt: You are an expert research strategist. Analyze the project context below and produce a structured plan focused on Revision Planning. Context: discipline={discipline}, dataset={dataset}, time horizon={timeline}, resource limits={resources}. Deliver: (1) assumptions, (2) stepwise method, (3) evaluation criteria linked to novelty, (4) risk controls, and (5) an implementation schedule. Conclude with measurable success indicators and a concise quality checklist.

Example: Example input: discipline=computational biology; dataset=single-cell RNA-seq cohort; timeline=12 weeks; resources=2 researchers and 1 GPU node. Example outcome: a staged protocol and timeline playbook with milestones.

Tips: State assumptions explicitly; define boundaries before proposing methods; tie every recommendation to a measurable criterion; include one contingency branch for likely failure points.

Expected Output: A publication-grade timeline playbook containing rationale, method choices, decision criteria, risk mitigations, and implementation priorities for Revision Planning.

Difficulty: Intermediate

Category: Validation

51. Publication Strategy 051: Design Response Strategy for a method benchmarking campaign

Objective: Build a high-clarity strategy for Response Strategy by improving feasibility, reducing ambiguity, and aligning decisions with research objectives.

Prompt: You are an expert research strategist. Analyze the project context below and produce a structured plan focused on Response Strategy. Context: discipline={discipline}, dataset={dataset}, time horizon={timeline}, resource limits={resources}. Deliver: (1) assumptions, (2) stepwise method, (3) evaluation criteria linked to feasibility, (4) risk controls, and (5) an implementation schedule. Conclude with measurable success indicators and a concise quality checklist.

Example: Example input: discipline=computational biology; dataset=single-cell RNA-seq cohort; timeline=12 weeks; resources=2 researchers and 1 GPU node. Example outcome: a staged protocol and submission strategy memo with milestones.

Tips: State assumptions explicitly; define boundaries before proposing methods; tie every recommendation to a measurable criterion; include one contingency branch for likely failure points.

Expected Output: A publication-grade submission strategy memo containing rationale, method choices, decision criteria, risk mitigations, and implementation priorities for Response Strategy.

Difficulty: Advanced

Category: Writing

52. Publication Strategy 052: Refine Venue Targeting for a reproducibility-sensitive investigation

Objective: Build a high-clarity strategy for Venue Targeting by improving rigor, reducing ambiguity, and aligning decisions with research objectives.

Prompt: You are an expert research strategist. Analyze the project context below and produce a structured plan focused on Venue Targeting. Context: discipline={discipline}, dataset={dataset}, time horizon={timeline}, resource limits={resources}. Deliver: (1) assumptions, (2) stepwise method, (3) evaluation criteria linked to rigor, (4) risk controls, and (5) an implementation schedule. Conclude with measurable success indicators and a concise quality checklist.

Example: Example input: discipline=computational biology; dataset=single-cell RNA-seq cohort; timeline=12 weeks; resources=2 researchers and 1 GPU node. Example outcome: a staged protocol and review-risk map with milestones.

Tips: State assumptions explicitly; define boundaries before proposing methods; tie every recommendation to a measurable criterion; include one contingency branch for likely failure points.

Expected Output: A publication-grade review-risk map containing rationale, method choices, decision criteria, risk mitigations, and implementation priorities for Venue Targeting.

Difficulty: Expert

Category: Reasoning

53. Publication Strategy 053: Synthesize Contribution Positioning for a cross-disciplinary study

Objective: Build a high-clarity strategy for Contribution Positioning by improving generalizability, reducing ambiguity, and aligning decisions with research objectives.

Prompt: You are an expert research strategist. Analyze the project context below and produce a structured plan focused on Contribution Positioning. Context: discipline={discipline}, dataset={dataset}, time horizon={timeline}, resource limits={resources}. Deliver: (1) assumptions, (2) stepwise method, (3) evaluation criteria linked to generalizability, (4) risk controls, and (5) an implementation schedule. Conclude with measurable success indicators and a concise quality checklist.

Example: Example input: discipline=computational biology; dataset=single-cell RNA-seq cohort; timeline=12 weeks; resources=2 researchers and 1 GPU node. Example outcome: a staged protocol and timeline playbook with milestones.

Tips: State assumptions explicitly; define boundaries before proposing methods; tie every recommendation to a measurable criterion; include one contingency branch for likely failure points.

Expected Output: A publication-grade timeline playbook containing rationale, method choices, decision criteria, risk mitigations, and implementation priorities for Contribution Positioning.

Difficulty: Beginner

Category: Strategy

54. Publication Strategy 054: Translate Revision Planning for an ethics-aware deployment study

Objective: Build a high-clarity strategy for Revision Planning by improving reproducibility, reducing ambiguity, and aligning decisions with research objectives.

Prompt: You are an expert research strategist. Analyze the project context below and produce a structured plan focused on Revision Planning. Context: discipline={discipline}, dataset={dataset}, time horizon={timeline}, resource limits={resources}. Deliver: (1) assumptions, (2) stepwise method, (3) evaluation criteria linked to reproducibility, (4) risk controls, and (5) an implementation schedule. Conclude with measurable success indicators and a concise quality checklist.

Example: Example input: discipline=computational biology; dataset=single-cell RNA-seq cohort; timeline=12 weeks; resources=2 researchers and 1 GPU node. Example outcome: a staged protocol and submission strategy memo with milestones.

Tips: State assumptions explicitly; define boundaries before proposing methods; tie every recommendation to a measurable criterion; include one contingency branch for likely failure points.

Expected Output: A publication-grade submission strategy memo containing rationale, method choices, decision criteria, risk mitigations, and implementation priorities for Revision Planning.

Difficulty: Intermediate

Category: Execution

55. Publication Strategy 055: Model Response Strategy for a longitudinal dataset

Objective: Build a high-clarity strategy for Response Strategy by improving ethical compliance, reducing ambiguity, and aligning decisions with research objectives.

Prompt: You are an expert research strategist. Analyze the project context below and produce a structured plan focused on Response Strategy. Context: discipline={discipline}, dataset={dataset}, time horizon={timeline}, resource limits={resources}. Deliver: (1) assumptions, (2) stepwise method, (3) evaluation criteria linked to ethical compliance, (4) risk controls, and (5) an implementation schedule. Conclude with measurable success indicators

and a concise quality checklist.

Example: Example input: discipline=computational biology; dataset=single-cell RNA-seq cohort; timeline=12 weeks; resources=2 researchers and 1 GPU node. Example outcome: a staged protocol and review-risk map with milestones.

Tips: State assumptions explicitly; define boundaries before proposing methods; tie every recommendation to a measurable criterion; include one contingency branch for likely failure points.

Expected Output: A publication-grade review-risk map containing rationale, method choices, decision criteria, risk mitigations, and implementation priorities for Response Strategy.

Difficulty: Advanced

Category: Optimization

56. Publication Strategy 056: Reframe Venue Targeting for a high-impact conference submission

Objective: Build a high-clarity strategy for Venue Targeting by improving cost efficiency, reducing ambiguity, and aligning decisions with research objectives.

Prompt: You are an expert research strategist. Analyze the project context below and produce a structured plan focused on Venue Targeting. Context: discipline={discipline}, dataset={dataset}, time horizon={timeline}, resource limits={resources}. Deliver: (1) assumptions, (2) stepwise method, (3) evaluation criteria linked to cost efficiency, (4) risk controls, and (5) an implementation schedule. Conclude with measurable success indicators and a concise quality checklist.

Example: Example input: discipline=computational biology; dataset=single-cell RNA-seq cohort; timeline=12 weeks; resources=2 researchers and 1 GPU node. Example outcome: a staged protocol and timeline playbook with milestones.

Tips: State assumptions explicitly; define boundaries before proposing methods; tie every recommendation to a measurable criterion; include one contingency branch for likely failure points.

Expected Output: A publication-grade timeline playbook containing rationale, method choices, decision criteria, risk mitigations, and implementation priorities for Venue Targeting.

Difficulty: Expert

Category: Planning

57. Publication Strategy 057: Evaluate Contribution Positioning for an emerging technology review

Objective: Build a high-clarity strategy for Contribution Positioning by improving computational efficiency, reducing ambiguity, and aligning decisions with research objectives.

Prompt: You are an expert research strategist. Analyze the project context below and produce a structured plan focused on Contribution Positioning. Context: discipline={discipline}, dataset={dataset}, time horizon={timeline}, resource limits={resources}. Deliver: (1) assumptions, (2) stepwise method, (3) evaluation criteria linked to computational efficiency, (4) risk controls, and (5) an implementation schedule. Conclude with measurable success indicators and a concise quality checklist.

Example: Example input: discipline=computational biology; dataset=single-cell RNA-seq cohort; timeline=12 weeks; resources=2 researchers and 1 GPU node. Example outcome: a staged protocol and submission strategy memo with milestones.

Tips: State assumptions explicitly; define boundaries before proposing methods; tie every recommendation to a measurable criterion; include one contingency branch for likely failure points.

Expected Output: A publication-grade submission strategy memo containing rationale, method choices, decision criteria, risk mitigations, and implementation priorities for Contribution Positioning.

Difficulty: Beginner

Category: Methodology

58. Publication Strategy 058: Validate Revision Planning for a policy-oriented manuscript

Objective: Build a high-clarity strategy for Revision Planning by improving publication readiness, reducing ambiguity, and aligning decisions with research objectives.

Prompt: You are an expert research strategist. Analyze the project context below and produce a structured plan focused on Revision Planning. Context: discipline={discipline}, dataset={dataset}, time horizon={timeline}, resource limits={resources}. Deliver: (1) assumptions, (2) stepwise method, (3) evaluation criteria linked to publication readiness, (4) risk controls, and (5) an implementation schedule. Conclude with measurable success indicators and a concise quality checklist.

Example: Example input: discipline=computational biology; dataset=single-cell RNA-seq cohort; timeline=12 weeks; resources=2 researchers and 1 GPU node. Example outcome: a staged protocol and review-risk map with milestones.

Tips: State assumptions explicitly; define boundaries before proposing methods; tie every recommendation to a measurable criterion; include one contingency branch for likely failure points.

Expected Output: A publication-grade review-risk map containing rationale, method choices, decision criteria, risk mitigations, and implementation priorities for Revision Planning.

Difficulty: Intermediate

Category: Validation

59. Publication Strategy 059: Map Response Strategy for an industry-backed experiment

Objective: Build a high-clarity strategy for Response Strategy by improving stakeholder clarity, reducing ambiguity, and aligning decisions with research objectives.

Prompt: You are an expert research strategist. Analyze the project context below and produce a structured plan focused on Response Strategy. Context: discipline={discipline}, dataset={dataset}, time horizon={timeline}, resource limits={resources}. Deliver: (1) assumptions, (2) stepwise method, (3) evaluation criteria linked to stakeholder clarity, (4) risk controls, and (5) an implementation schedule. Conclude with measurable success indicators and a concise quality checklist.

Example: Example input: discipline=computational biology; dataset=single-cell RNA-seq cohort; timeline=12 weeks; resources=2 researchers and 1 GPU node. Example outcome: a staged protocol and timeline playbook with milestones.

Tips: State assumptions explicitly; define boundaries before proposing methods; tie every recommendation to a measurable criterion; include one contingency branch for likely failure points.

Expected Output: A publication-grade timeline playbook containing rationale, method choices, decision criteria, risk mitigations, and implementation priorities for Response Strategy.

Difficulty: Advanced

Category: Writing

60. Publication Strategy 060: Prioritize Venue Targeting for a multi-phase project

Objective: Build a high-clarity strategy for Venue Targeting by improving novelty, reducing ambiguity, and aligning decisions with research objectives.

Prompt: You are an expert research strategist. Analyze the project context below and produce a structured plan focused on Venue Targeting. Context: discipline={discipline}, dataset={dataset}, time horizon={timeline}, resource limits={resources}. Deliver: (1) assumptions, (2) stepwise method, (3) evaluation criteria linked to novelty, (4) risk controls, and (5) an implementation schedule. Conclude with measurable success indicators and a concise quality checklist.

Example: Example input: discipline=computational biology; dataset=single-cell RNA-seq cohort; timeline=12 weeks; resources=2 researchers and 1 GPU node. Example outcome: a staged protocol and submission strategy memo with milestones.

Tips: State assumptions explicitly; define boundaries before proposing methods; tie every recommendation to a measurable criterion; include one contingency branch for likely failure points.

Expected Output: A publication-grade submission strategy memo containing rationale, method choices, decision criteria, risk mitigations, and implementation priorities for Venue Targeting.

Difficulty: Expert

Category: Reasoning

61. Publication Strategy 061: Forecast Contribution Positioning for a method benchmarking campaign

Objective: Build a high-clarity strategy for Contribution Positioning by improving feasibility, reducing ambiguity, and aligning decisions with research objectives.

Prompt: You are an expert research strategist. Analyze the project context below and produce a structured plan focused on Contribution Positioning. Context: discipline={discipline}, dataset={dataset}, time horizon={timeline}, resource limits={resources}. Deliver: (1) assumptions, (2) stepwise method, (3) evaluation criteria linked to feasibility, (4) risk controls, and (5) an implementation schedule. Conclude with measurable success indicators and a concise quality checklist.

Example: Example input: discipline=computational biology; dataset=single-cell RNA-seq cohort; timeline=12 weeks; resources=2 researchers and 1 GPU node. Example outcome: a staged protocol and review-risk map with milestones.

Tips: State assumptions explicitly; define boundaries before proposing methods; tie every recommendation to a measurable criterion; include one contingency branch for likely failure points.

Expected Output: A publication-grade review-risk map containing rationale, method choices, decision criteria, risk mitigations, and implementation priorities for Contribution Positioning.

Difficulty: Beginner

Category: Strategy

62. Publication Strategy 062: Operationalize Revision Planning for a reproducibility-sensitive investigation

Objective: Build a high-clarity strategy for Revision Planning by improving rigor, reducing ambiguity, and aligning decisions with research objectives.

Prompt: You are an expert research strategist. Analyze the project context below and produce a structured plan focused on Revision Planning. Context: discipline={discipline}, dataset={dataset}, time horizon={timeline}, resource limits={resources}. Deliver: (1) assumptions, (2) stepwise method, (3) evaluation criteria linked to rigor, (4) risk controls, and (5) an implementation schedule. Conclude with measurable success indicators and a concise quality checklist.

Example: Example input: discipline=computational biology; dataset=single-cell RNA-seq cohort; timeline=12 weeks; resources=2 researchers and 1 GPU node. Example outcome: a staged protocol and timeline playbook with milestones.

Tips: State assumptions explicitly; define boundaries before proposing methods; tie every recommendation to a measurable criterion; include one contingency branch for likely failure points.

Expected Output: A publication-grade timeline playbook containing rationale, method choices, decision criteria, risk mitigations, and implementation priorities for Revision Planning.

Difficulty: Intermediate

Category: Execution

63. Publication Strategy 063: Compare Response Strategy for a cross-disciplinary study

Objective: Build a high-clarity strategy for Response Strategy by improving generalizability, reducing ambiguity, and aligning decisions with research objectives.

Prompt: You are an expert research strategist. Analyze the project context below and produce a structured plan focused on Response Strategy. Context: discipline={discipline}, dataset={dataset}, time horizon={timeline}, resource limits={resources}. Deliver: (1) assumptions, (2) stepwise method, (3) evaluation criteria linked to generalizability, (4) risk controls, and (5) an implementation schedule. Conclude with measurable success indicators and a concise quality checklist.

Example: Example input: discipline=computational biology; dataset=single-cell RNA-seq cohort; timeline=12 weeks; resources=2 researchers and 1 GPU node. Example outcome: a staged protocol and submission strategy memo with milestones.

Tips: State assumptions explicitly; define boundaries before proposing methods; tie every recommendation to a measurable criterion; include one contingency branch for likely failure points.

Expected Output: A publication-grade submission strategy memo containing rationale, method choices, decision criteria, risk mitigations, and implementation priorities for Response Strategy.

Difficulty: Advanced

Category: Optimization

64. Publication Strategy 064: Optimize Venue Targeting for an ethics-aware deployment study

Objective: Build a high-clarity strategy for Venue Targeting by improving reproducibility, reducing ambiguity, and aligning decisions with research objectives.

Prompt: You are an expert research strategist. Analyze the project context below and produce a structured plan focused on Venue Targeting. Context: discipline={discipline}, dataset={dataset}, time horizon={timeline}, resource limits={resources}. Deliver: (1) assumptions, (2) stepwise method, (3) evaluation criteria linked to reproducibility, (4) risk controls, and (5) an implementation schedule. Conclude with measurable success indicators and a concise quality checklist.

Example: Example input: discipline=computational biology; dataset=single-cell RNA-seq cohort; timeline=12 weeks; resources=2 researchers and 1 GPU node. Example outcome: a staged protocol and review-risk map with milestones.

Tips: State assumptions explicitly; define boundaries before proposing methods; tie every recommendation to a measurable criterion; include one contingency branch for likely failure points.

Expected Output: A publication-grade review-risk map containing rationale, method choices, decision criteria, risk mitigations, and implementation priorities for Venue Targeting.

Difficulty: Expert

Category: Planning

65. Publication Strategy 065: Diagnose Contribution Positioning for a longitudinal dataset

Objective: Build a high-clarity strategy for Contribution Positioning by improving ethical compliance, reducing ambiguity, and aligning decisions with research objectives.

Prompt: You are an expert research strategist. Analyze the project context below and produce a structured plan focused on Contribution Positioning. Context: discipline={discipline}, dataset={dataset}, time horizon={timeline}, resource limits={resources}. Deliver: (1) assumptions, (2) stepwise method, (3) evaluation criteria linked to ethical compliance, (4) risk controls, and (5) an implementation schedule. Conclude with measurable success indicators and a concise quality checklist.

Example: Example input: discipline=computational biology; dataset=single-cell RNA-seq cohort; timeline=12 weeks; resources=2 researchers and 1 GPU node. Example outcome: a staged protocol and timeline playbook with milestones.

Tips: State assumptions explicitly; define boundaries before proposing methods; tie every recommendation to a measurable criterion; include one contingency branch for likely failure points.

Expected Output: A publication-grade timeline playbook containing rationale, method choices, decision criteria, risk mitigations, and implementation priorities for Contribution Positioning.

Difficulty: Beginner

Category: Methodology

66. Publication Strategy 066: Structure Revision Planning for a high-impact conference submission

Objective: Build a high-clarity strategy for Revision Planning by improving cost efficiency, reducing ambiguity, and aligning decisions with research objectives.

Prompt: You are an expert research strategist. Analyze the project context below and produce a structured plan focused on Revision Planning. Context: discipline={discipline}, dataset={dataset}, time horizon={timeline}, resource limits={resources}. Deliver: (1) assumptions, (2) stepwise method, (3) evaluation criteria linked to cost efficiency, (4) risk controls, and (5) an implementation schedule. Conclude with measurable success indicators and a concise quality checklist.

Example: Example input: discipline=computational biology; dataset=single-cell RNA-seq cohort; timeline=12 weeks; resources=2 researchers and 1 GPU node. Example outcome: a staged protocol and submission strategy memo with milestones.

Tips: State assumptions explicitly; define boundaries before proposing methods; tie every recommendation to a measurable criterion; include one contingency branch for likely failure points.

Expected Output: A publication-grade submission strategy memo containing rationale, method choices, decision criteria, risk mitigations, and implementation priorities for Revision Planning.

Difficulty: Intermediate

Category: Validation

67. Publication Strategy 067: Interrogate Response Strategy for an emerging technology review

Objective: Build a high-clarity strategy for Response Strategy by improving computational efficiency, reducing ambiguity, and aligning decisions with research objectives.

Prompt: You are an expert research strategist. Analyze the project context below and produce a structured plan focused on Response Strategy. Context: discipline={discipline}, dataset={dataset}, time horizon={timeline}, resource limits={resources}. Deliver: (1) assumptions, (2) stepwise method, (3) evaluation criteria linked to computational efficiency, (4) risk controls, and (5) an implementation schedule. Conclude with measurable success indicators and a concise quality checklist.

Example: Example input: discipline=computational biology; dataset=single-cell RNA-seq cohort; timeline=12 weeks; resources=2 researchers and 1 GPU node. Example outcome: a staged protocol and review-risk map with milestones.

Tips: State assumptions explicitly; define boundaries before proposing methods; tie every recommendation to a measurable criterion; include one contingency branch for likely failure points.

Expected Output: A publication-grade review-risk map containing rationale, method choices, decision criteria, risk mitigations, and implementation priorities for Response Strategy.

Difficulty: Advanced

Category: Writing

68. Publication Strategy 068: Design Venue Targeting for a policy-oriented manuscript

Objective: Build a high-clarity strategy for Venue Targeting by improving publication readiness, reducing ambiguity, and aligning decisions with research objectives.

Prompt: You are an expert research strategist. Analyze the project context below and produce a structured plan focused on Venue Targeting. Context: discipline={discipline}, dataset={dataset}, time horizon={timeline}, resource limits={resources}. Deliver: (1) assumptions, (2) stepwise method, (3) evaluation criteria linked to publication readiness, (4) risk controls, and (5) an implementation schedule. Conclude with measurable success indicators and a concise quality checklist.

Example: Example input: discipline=computational biology; dataset=single-cell RNA-seq cohort; timeline=12 weeks; resources=2 researchers and 1 GPU node. Example outcome: a staged protocol and timeline playbook with milestones.

Tips: State assumptions explicitly; define boundaries before proposing methods; tie every recommendation to a measurable criterion; include one contingency branch for likely failure points.

Expected Output: A publication-grade timeline playbook containing rationale, method choices, decision criteria, risk mitigations, and implementation priorities for Venue Targeting.

Difficulty: Expert

Category: Reasoning

69. Publication Strategy 069: Refine Contribution Positioning for an industry-backed experiment

Objective: Build a high-clarity strategy for Contribution Positioning by improving stakeholder clarity, reducing ambiguity, and aligning decisions with research objectives.

Prompt: You are an expert research strategist. Analyze the project context below and produce a structured plan focused on Contribution Positioning. Context: discipline={discipline}, dataset={dataset}, time horizon={timeline}, resource limits={resources}. Deliver: (1) assumptions, (2) stepwise method, (3) evaluation criteria linked to stakeholder clarity, (4) risk controls, and (5) an implementation schedule. Conclude with measurable success indicators and a concise quality checklist.

Example: Example input: discipline=computational biology; dataset=single-cell RNA-seq cohort; timeline=12 weeks; resources=2 researchers and 1 GPU node. Example outcome: a staged protocol and submission strategy memo with milestones.

Tips: State assumptions explicitly; define boundaries before proposing methods; tie every recommendation to a measurable criterion; include one contingency branch for likely failure points.

Expected Output: A publication-grade submission strategy memo containing rationale, method choices, decision criteria, risk mitigations, and implementation priorities for Contribution Positioning.

Difficulty: Beginner

Category: Strategy

70. Publication Strategy 070: Synthesize Revision Planning for a multi-phase project

Objective: Build a high-clarity strategy for Revision Planning by improving novelty, reducing ambiguity, and aligning decisions with research objectives.

Prompt: You are an expert research strategist. Analyze the project context below and produce a structured plan focused on Revision Planning. Context: discipline={discipline}, dataset={dataset}, time horizon={timeline}, resource limits={resources}. Deliver: (1) assumptions, (2) stepwise method, (3) evaluation criteria linked to novelty, (4) risk controls, and (5) an implementation schedule. Conclude with measurable success indicators and a concise quality checklist.

Example: Example input: discipline=computational biology; dataset=single-cell RNA-seq cohort; timeline=12 weeks; resources=2 researchers and 1 GPU node. Example outcome: a staged protocol and review-risk map with milestones.

Tips: State assumptions explicitly; define boundaries before proposing methods; tie every recommendation to a measurable criterion; include one contingency branch for likely failure points.

Expected Output: A publication-grade review-risk map containing rationale, method choices, decision criteria, risk mitigations, and implementation priorities for Revision Planning.

Difficulty: Intermediate

Category: Execution

71. Publication Strategy 071: Translate Response Strategy for a method benchmarking campaign

Objective: Build a high-clarity strategy for Response Strategy by improving feasibility, reducing ambiguity, and aligning decisions with research objectives.

Prompt: You are an expert research strategist. Analyze the project context below and produce a structured plan focused on Response Strategy. Context: discipline={discipline}, dataset={dataset}, time horizon={timeline}, resource limits={resources}. Deliver: (1) assumptions, (2) stepwise method, (3) evaluation criteria linked to feasibility, (4) risk controls, and (5) an implementation schedule. Conclude with measurable success indicators and a concise quality checklist.

Example: Example input: discipline=computational biology; dataset=single-cell RNA-seq cohort; timeline=12 weeks; resources=2 researchers and 1 GPU node. Example outcome: a staged protocol and timeline playbook with milestones.

Tips: State assumptions explicitly; define boundaries before proposing methods; tie every recommendation to a measurable criterion; include one contingency branch for likely failure points.

Expected Output: A publication-grade timeline playbook containing rationale, method choices, decision criteria, risk mitigations, and implementation priorities for Response Strategy.

Difficulty: Advanced

Category: Optimization

72. Publication Strategy 072: Model Venue Targeting for a reproducibility-sensitive investigation

Objective: Build a high-clarity strategy for Venue Targeting by improving rigor, reducing ambiguity, and aligning decisions with research objectives.

Prompt: You are an expert research strategist. Analyze the project context below and produce a structured plan focused on Venue Targeting. Context: discipline={discipline}, dataset={dataset}, time horizon={timeline}, resource limits={resources}. Deliver: (1) assumptions, (2) stepwise method, (3) evaluation criteria linked to rigor, (4) risk controls, and (5) an implementation schedule. Conclude with measurable success indicators and a concise quality checklist.

Example: Example input: discipline=computational biology; dataset=single-cell RNA-seq cohort; timeline=12 weeks; resources=2 researchers and 1 GPU node. Example outcome: a staged protocol and submission strategy memo with milestones.

Tips: State assumptions explicitly; define boundaries before proposing methods; tie every recommendation to a measurable criterion; include one contingency branch for likely failure points.

Expected Output: A publication-grade submission strategy memo containing rationale, method choices, decision criteria, risk mitigations, and implementation priorities for Venue Targeting.

Difficulty: Expert

Category: Planning

73. Publication Strategy 073: Reframe Contribution Positioning for a cross-disciplinary study

Objective: Build a high-clarity strategy for Contribution Positioning by improving generalizability, reducing ambiguity, and aligning decisions with research objectives.

Prompt: You are an expert research strategist. Analyze the project context below and produce a structured plan focused on Contribution Positioning. Context: discipline={discipline}, dataset={dataset}, time horizon={timeline}, resource limits={resources}. Deliver: (1) assumptions, (2) stepwise method, (3) evaluation criteria linked to generalizability, (4) risk controls, and (5) an implementation schedule. Conclude with measurable success indicators and a concise quality checklist.

Example: Example input: discipline=computational biology; dataset=single-cell RNA-seq cohort; timeline=12 weeks; resources=2 researchers and 1 GPU node. Example outcome: a staged protocol and review-risk map with milestones.

Tips: State assumptions explicitly; define boundaries before proposing methods; tie every recommendation to a measurable criterion; include one contingency branch for likely failure points.

Expected Output: A publication-grade review-risk map containing rationale, method choices, decision criteria, risk mitigations, and implementation priorities for Contribution Positioning.

Difficulty: Beginner

Category: Methodology

74. Publication Strategy 074: Evaluate Revision Planning for an ethics-aware deployment study

Objective: Build a high-clarity strategy for Revision Planning by improving reproducibility, reducing ambiguity, and aligning decisions with research objectives.

Prompt: You are an expert research strategist. Analyze the project context below and produce a structured plan focused on Revision Planning. Context: discipline={discipline}, dataset={dataset}, time horizon={timeline}, resource limits={resources}. Deliver: (1) assumptions, (2) stepwise method, (3) evaluation criteria linked to reproducibility, (4) risk controls, and (5) an implementation schedule. Conclude with measurable success indicators and a concise quality checklist.

Example: Example input: discipline=computational biology; dataset=single-cell RNA-seq cohort; timeline=12 weeks; resources=2 researchers and 1 GPU node. Example outcome: a staged protocol and timeline playbook with milestones.

Tips: State assumptions explicitly; define boundaries before proposing methods; tie every recommendation to a measurable criterion; include one contingency branch for likely failure points.

Expected Output: A publication-grade timeline playbook containing rationale, method choices, decision criteria, risk mitigations, and implementation priorities for Revision Planning.

Difficulty: Intermediate

Category: Validation

75. Publication Strategy 075: Validate Response Strategy for a longitudinal dataset

Objective: Build a high-clarity strategy for Response Strategy by improving ethical compliance, reducing ambiguity, and aligning decisions with research objectives.

Prompt: You are an expert research strategist. Analyze the project context below and produce a structured plan focused on Response Strategy. Context: discipline={discipline}, dataset={dataset}, time horizon={timeline}, resource limits={resources}. Deliver: (1) assumptions, (2) stepwise method, (3) evaluation criteria linked to ethical compliance, (4) risk controls, and (5) an implementation schedule. Conclude with measurable success indicators and a concise quality checklist.

Example: Example input: discipline=computational biology; dataset=single-cell RNA-seq cohort; timeline=12 weeks; resources=2 researchers and 1 GPU node. Example outcome: a staged protocol and submission strategy memo with milestones.

Tips: State assumptions explicitly; define boundaries before proposing methods; tie every recommendation to a measurable criterion; include one contingency branch for likely failure points.

Expected Output: A publication-grade submission strategy memo containing rationale, method choices, decision criteria, risk mitigations, and implementation priorities for Response Strategy.

Difficulty: Advanced

Category: Writing

76. Publication Strategy 076: Map Venue Targeting for a high-impact conference submission

Objective: Build a high-clarity strategy for Venue Targeting by improving cost efficiency, reducing ambiguity, and aligning decisions with research objectives.

Prompt: You are an expert research strategist. Analyze the project context below and produce a structured plan focused on Venue Targeting. Context: discipline={discipline}, dataset={dataset}, time horizon={timeline}, resource limits={resources}. Deliver: (1) assumptions, (2) stepwise method, (3) evaluation criteria linked to cost efficiency, (4) risk controls, and (5) an implementation schedule. Conclude with measurable success indicators and a concise quality checklist.

Example: Example input: discipline=computational biology; dataset=single-cell RNA-seq cohort; timeline=12 weeks; resources=2 researchers and 1 GPU node. Example outcome: a staged protocol and review-risk map with milestones.

Tips: State assumptions explicitly; define boundaries before proposing methods; tie every recommendation to a measurable criterion; include one contingency branch for likely failure points.

Expected Output: A publication-grade review-risk map containing rationale, method choices, decision criteria, risk mitigations, and implementation priorities for Venue Targeting.

Difficulty: Expert

Category: Reasoning

77. Publication Strategy 077: Prioritize Contribution Positioning for an emerging technology review

Objective: Build a high-clarity strategy for Contribution Positioning by improving computational efficiency, reducing ambiguity, and aligning decisions with research objectives.

Prompt: You are an expert research strategist. Analyze the project context below and produce a structured plan focused on Contribution Positioning. Context: discipline={discipline}, dataset={dataset}, time horizon={timeline}, resource limits={resources}. Deliver: (1) assumptions, (2) stepwise method, (3) evaluation criteria linked to computational efficiency, (4) risk controls, and (5) an implementation schedule. Conclude with measurable success indicators and a concise quality checklist.

Example: Example input: discipline=computational biology; dataset=single-cell RNA-seq cohort; timeline=12 weeks; resources=2 researchers and 1 GPU node. Example outcome: a staged protocol and timeline playbook with milestones.

Tips: State assumptions explicitly; define boundaries before proposing methods; tie every recommendation to a measurable criterion; include one contingency branch for likely failure points.

Expected Output: A publication-grade timeline playbook containing rationale, method choices, decision criteria, risk mitigations, and implementation priorities for Contribution Positioning.

Difficulty: Beginner

Category: Strategy

78. Publication Strategy 078: Forecast Revision Planning for a policy-oriented manuscript

Objective: Build a high-clarity strategy for Revision Planning by improving publication readiness, reducing ambiguity, and aligning decisions with research objectives.

Prompt: You are an expert research strategist. Analyze the project context below and produce a structured plan focused on Revision Planning. Context: discipline={discipline}, dataset={dataset}, time horizon={timeline}, resource limits={resources}. Deliver: (1) assumptions, (2) stepwise method, (3) evaluation criteria linked to publication readiness, (4) risk controls, and (5) an implementation schedule. Conclude with measurable success indicators and a concise quality checklist.

Example: Example input: discipline=computational biology; dataset=single-cell RNA-seq cohort; timeline=12 weeks; resources=2 researchers and 1 GPU node. Example outcome: a staged protocol and submission strategy memo with milestones.

Tips: State assumptions explicitly; define boundaries before proposing methods; tie every recommendation to a measurable criterion; include one contingency branch for likely failure points.

Expected Output: A publication-grade submission strategy memo containing rationale, method choices, decision criteria, risk mitigations, and implementation priorities for Revision Planning.

Difficulty: Intermediate

Category: Execution

79. Publication Strategy 079: Operationalize Response Strategy for an industry-backed experiment

Objective: Build a high-clarity strategy for Response Strategy by improving stakeholder clarity, reducing ambiguity, and aligning decisions with research objectives.

Prompt: You are an expert research strategist. Analyze the project context below and produce a structured plan focused on Response Strategy. Context: discipline={discipline}, dataset={dataset}, time horizon={timeline}, resource limits={resources}. Deliver: (1) assumptions, (2) stepwise method, (3) evaluation criteria linked to stakeholder clarity, (4) risk controls, and (5) an implementation schedule. Conclude with measurable success indicators and a concise quality checklist.

Example: Example input: discipline=computational biology; dataset=single-cell RNA-seq cohort; timeline=12 weeks; resources=2 researchers and 1 GPU node. Example outcome: a staged protocol and review-risk map with milestones.

Tips: State assumptions explicitly; define boundaries before proposing methods; tie every recommendation to a measurable criterion; include one contingency branch for likely failure points.

Expected Output: A publication-grade review-risk map containing rationale, method choices, decision criteria, risk mitigations, and implementation priorities for Response Strategy.

Difficulty: Advanced

Category: Optimization

80. Publication Strategy 080: Compare Venue Targeting for a multi-phase project

Objective: Build a high-clarity strategy for Venue Targeting by improving novelty, reducing ambiguity, and aligning decisions with research objectives.

Prompt: You are an expert research strategist. Analyze the project context below and produce a structured plan focused on Venue Targeting. Context: discipline={discipline}, dataset={dataset}, time horizon={timeline}, resource limits={resources}. Deliver: (1) assumptions, (2) stepwise method, (3) evaluation criteria linked to novelty, (4) risk controls, and (5) an implementation schedule. Conclude with measurable success indicators and a concise quality checklist.

Example: Example input: discipline=computational biology; dataset=single-cell RNA-seq cohort; timeline=12 weeks; resources=2 researchers and 1 GPU node. Example outcome: a staged protocol and timeline playbook with milestones.

Tips: State assumptions explicitly; define boundaries before proposing methods; tie every recommendation to a measurable criterion; include one contingency branch for likely failure points.

81. Publication Strategy 081: Optimize Contribution Positioning for a method benchmarking campaign

Objective: Build a high-clarity strategy for Contribution Positioning by improving feasibility, reducing ambiguity, and aligning decisions with research objectives.

Prompt: You are an expert research strategist. Analyze the project context below and produce a structured plan focused on Contribution Positioning. Context: discipline={discipline}, dataset={dataset}, time horizon={timeline}, resource limits={resources}. Deliver: (1) assumptions, (2) stepwise method, (3) evaluation criteria linked to

feasibility, (4) risk controls, and (5) an implementation schedule. Conclude with measurable success indicators and a concise quality checklist.

Example: Example input: discipline=computational biology; dataset=single-cell RNA-seq cohort; timeline=12 weeks; resources=2 researchers and 1 GPU node. Example outcome: a staged protocol and submission strategy memo with milestones.

Tips: State assumptions explicitly; define boundaries before proposing methods; tie every recommendation to a measurable criterion; include one contingency branch for likely failure points.

Expected Output: A publication-grade submission strategy memo containing rationale, method choices, decision criteria, risk mitigations, and implementation priorities for Contribution Positioning.

Difficulty: Beginner

Category: Methodology

82. Publication Strategy 082: Diagnose Revision Planning for a reproducibility-sensitive investigation

Objective: Build a high-clarity strategy for Revision Planning by improving rigor, reducing ambiguity, and aligning decisions with research objectives.

Prompt: You are an expert research strategist. Analyze the project context below and produce a structured plan focused on Revision Planning. Context: discipline={discipline}, dataset={dataset}, time horizon={timeline}, resource limits={resources}. Deliver: (1) assumptions, (2) stepwise method, (3) evaluation criteria linked to rigor, (4) risk controls, and (5) an implementation schedule. Conclude with measurable success indicators and a concise quality checklist.

Example: Example input: discipline=computational biology; dataset=single-cell RNA-seq cohort; timeline=12 weeks; resources=2 researchers and 1 GPU node. Example outcome: a staged protocol and review-risk map with milestones.

Tips: State assumptions explicitly; define boundaries before proposing methods; tie every recommendation to a measurable criterion; include one contingency branch for likely failure points.

Expected Output: A publication-grade review-risk map containing rationale, method choices, decision criteria, risk mitigations, and implementation priorities for Revision Planning.

Difficulty: Intermediate

Category: Validation

83. Publication Strategy 083: Structure Response Strategy for a cross-disciplinary study

Objective: Build a high-clarity strategy for Response Strategy by improving generalizability, reducing ambiguity, and aligning decisions with research objectives.

Prompt: You are an expert research strategist. Analyze the project context below and produce a structured plan focused on Response Strategy. Context: discipline={discipline}, dataset={dataset}, time horizon={timeline}, resource limits={resources}. Deliver: (1) assumptions, (2) stepwise method, (3) evaluation criteria linked to generalizability, (4) risk controls, and (5) an implementation schedule. Conclude with measurable success indicators and a concise quality checklist.

Example: Example input: discipline=computational biology; dataset=single-cell RNA-seq cohort; timeline=12 weeks; resources=2 researchers and 1 GPU node. Example outcome: a staged protocol and timeline playbook with milestones.

Tips: State assumptions explicitly; define boundaries before proposing methods; tie every recommendation to a measurable criterion; include one contingency branch for likely failure points.

Expected Output: A publication-grade timeline playbook containing rationale, method choices, decision criteria, risk mitigations, and implementation priorities for Response Strategy.

Difficulty: Advanced

Category: Writing

84. Publication Strategy 084: Interrogate Venue Targeting for an ethics-aware deployment study

Objective: Build a high-clarity strategy for Venue Targeting by improving reproducibility, reducing ambiguity, and aligning decisions with research objectives.

Prompt: You are an expert research strategist. Analyze the project context below and produce a structured plan focused on Venue Targeting. Context: discipline={discipline}, dataset={dataset}, time horizon={timeline}, resource limits={resources}. Deliver: (1) assumptions, (2) stepwise method, (3) evaluation criteria linked to reproducibility, (4) risk controls, and (5) an implementation schedule. Conclude with measurable success indicators and a concise quality checklist.

Example: Example input: discipline=computational biology; dataset=single-cell RNA-seq cohort; timeline=12 weeks; resources=2 researchers and 1 GPU node. Example outcome: a staged protocol and submission strategy memo with milestones.

Tips: State assumptions explicitly; define boundaries before proposing methods; tie every recommendation to a measurable criterion; include one contingency branch for likely failure points.

Expected Output: A publication-grade submission strategy memo containing rationale, method choices, decision criteria, risk mitigations, and implementation priorities for Venue Targeting.

Difficulty: Expert

Category: Reasoning

85. Publication Strategy 085: Design Contribution Positioning for a longitudinal dataset

Objective: Build a high-clarity strategy for Contribution Positioning by improving ethical compliance, reducing ambiguity, and aligning decisions with research objectives.

Prompt: You are an expert research strategist. Analyze the project context below and produce a structured plan focused on Contribution Positioning. Context: discipline={discipline}, dataset={dataset}, time horizon={timeline}, resource limits={resources}. Deliver: (1) assumptions, (2) stepwise method, (3) evaluation criteria linked to ethical compliance, (4) risk controls, and (5) an implementation schedule. Conclude with measurable success indicators and a concise quality checklist.

Example: Example input: discipline=computational biology; dataset=single-cell RNA-seq cohort; timeline=12 weeks; resources=2 researchers and 1 GPU node. Example outcome: a staged protocol and review-risk map with milestones.

Tips: State assumptions explicitly; define boundaries before proposing methods; tie every recommendation to a measurable criterion; include one contingency branch for likely failure points.

Expected Output: A publication-grade review-risk map containing rationale, method choices, decision criteria, risk mitigations, and implementation priorities for Contribution Positioning.

Difficulty: Beginner

Category: Strategy

86. Publication Strategy 086: Refine Revision Planning for a high-impact conference submission

Objective: Build a high-clarity strategy for Revision Planning by improving cost efficiency, reducing ambiguity, and aligning decisions with research objectives.

Prompt: You are an expert research strategist. Analyze the project context below and produce a structured plan focused on Revision Planning. Context: discipline={discipline}, dataset={dataset}, time horizon={timeline}, resource limits={resources}. Deliver: (1) assumptions, (2) stepwise method, (3) evaluation criteria linked to cost efficiency, (4) risk controls, and (5) an implementation schedule. Conclude with measurable success indicators and a concise quality checklist.

Example: Example input: discipline=computational biology; dataset=single-cell RNA-seq cohort; timeline=12 weeks; resources=2 researchers and 1 GPU node. Example outcome: a staged protocol and timeline playbook with milestones.

Tips: State assumptions explicitly; define boundaries before proposing methods; tie every recommendation to a measurable criterion; include one contingency branch for likely failure points.

Expected Output: A publication-grade timeline playbook containing rationale, method choices, decision criteria, risk mitigations, and implementation priorities for Revision Planning.

Difficulty: Intermediate

Category: Execution

87. Publication Strategy 087: Synthesize Response Strategy for an emerging technology review

Objective: Build a high-clarity strategy for Response Strategy by improving computational efficiency, reducing ambiguity, and aligning decisions with research objectives.

Prompt: You are an expert research strategist. Analyze the project context below and produce a structured plan focused on Response Strategy. Context: discipline={discipline}, dataset={dataset}, time horizon={timeline}, resource limits={resources}. Deliver: (1) assumptions, (2) stepwise method, (3) evaluation criteria linked to computational efficiency, (4) risk controls, and (5) an implementation schedule. Conclude with measurable success indicators and a concise quality checklist.

Example: Example input: discipline=computational biology; dataset=single-cell RNA-seq cohort; timeline=12 weeks; resources=2 researchers and 1 GPU node. Example outcome: a staged protocol and submission strategy memo with milestones.

Tips: State assumptions explicitly; define boundaries before proposing methods; tie every recommendation to a measurable criterion; include one contingency branch for likely failure points.

88. Publication Strategy 088: Translate Venue Targeting for a policy-oriented manuscript

Objective: Build a high-clarity strategy for Venue Targeting by improving publication readiness, reducing ambiguity, and aligning decisions with research objectives.

Prompt: You are an expert research strategist. Analyze the project context below and produce a structured plan focused on Venue Targeting. Context: discipline={discipline}, dataset={dataset}, time horizon={timeline}, resource limits={resources}. Deliver: (1) assumptions, (2) stepwise method, (3) evaluation criteria linked to publication

readiness, (4) risk controls, and (5) an implementation schedule. Conclude with measurable success indicators and a concise quality checklist.

Example: Example input: discipline=computational biology; dataset=single-cell RNA-seq cohort; timeline=12 weeks; resources=2 researchers and 1 GPU node. Example outcome: a staged protocol and review-risk map with milestones.

Tips: State assumptions explicitly; define boundaries before proposing methods; tie every recommendation to a measurable criterion; include one contingency branch for likely failure points.

Expected Output: A publication-grade review-risk map containing rationale, method choices, decision criteria, risk mitigations, and implementation priorities for Venue Targeting.

Difficulty: Expert

Category: Planning

89. Publication Strategy 089: Model Contribution Positioning for an industry-backed experiment

Objective: Build a high-clarity strategy for Contribution Positioning by improving stakeholder clarity, reducing ambiguity, and aligning decisions with research objectives.

Prompt: You are an expert research strategist. Analyze the project context below and produce a structured plan focused on Contribution Positioning. Context: discipline={discipline}, dataset={dataset}, time horizon={timeline}, resource limits={resources}. Deliver: (1) assumptions, (2) stepwise method, (3) evaluation criteria linked to stakeholder clarity, (4) risk controls, and (5) an implementation schedule. Conclude with measurable success indicators and a concise quality checklist.

Example: Example input: discipline=computational biology; dataset=single-cell RNA-seq cohort; timeline=12 weeks; resources=2 researchers and 1 GPU node. Example outcome: a staged protocol and timeline playbook with milestones.

Tips: State assumptions explicitly; define boundaries before proposing methods; tie every recommendation to a measurable criterion; include one contingency branch for likely failure points.

Expected Output: A publication-grade timeline playbook containing rationale, method choices, decision criteria, risk mitigations, and implementation priorities for Contribution Positioning.

Difficulty: Beginner

90. Publication Strategy 090: Reframe Revision Planning for a multi-phase project

Objective: Build a high-clarity strategy for Revision Planning by improving novelty, reducing ambiguity, and aligning decisions with research objectives.

Prompt: You are an expert research strategist. Analyze the project context below and produce a structured plan focused on Revision Planning. Context: discipline={discipline}, dataset={dataset}, time horizon={timeline}, resource limits={resources}. Deliver: (1) assumptions, (2) stepwise method, (3) evaluation criteria linked to novelty, (4) risk controls, and (5) an implementation schedule. Conclude with measurable success indicators and a concise quality checklist.

Example: Example input: discipline=computational biology; dataset=single-cell RNA-seq cohort; timeline=12 weeks; resources=2 researchers and 1 GPU node. Example outcome: a staged protocol and submission strategy memo with milestones.

Tips: State assumptions explicitly; define boundaries before proposing methods; tie every recommendation to a measurable criterion; include one contingency branch for likely failure points.

Expected Output: A publication-grade submission strategy memo containing rationale, method choices, decision criteria, risk mitigations, and implementation priorities for Revision Planning.

Difficulty: Intermediate

Category: Validation

Summary

Applying these 90 prompts systematically improves decision quality, writing clarity, and publication readiness across research cycles.
